

Request to Move [RFC 954](#) to Historic Status

<[draft-brunner-rfc954-historic-00.txt](#)>

Status of this Memo

This document is an Internet-Draft and is in full conformance with all provisions of [Section 10 of RFC2026](#).

This document is an Internet-Draft. Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as ``work in progress.''

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

Abstract

This memo requests a change of the status of [RFC 954](#), "NICNAME/WHOIS" to Historic.

1. Introduction

The NICNAME/WHOIS [[1](#)] protocol, a TCP transaction based query/response protocol, and server [[2](#)], ran on a host located at SRI International. It was one of a series of internet services maintained by the DDN Network Information Center (NIC) at SRI International on behalf of the Defense Communications Agency (DCA).

This service provided DDN-network-wide directory service to internet users, via user programs running on local hosts, and delivered the full name, U.S. mailing address, telephone number, and network mailbox for DDN users who were registered in the NIC database.

2. Action

Since the Defense Communications Agency (DCA) no longer contracts to SRI International to operate the DDN Network Information Center (NIC) at SRI International on its behalf, and the ARPANET was retired in 1990, and all DDN services terminated in 1995, MILNET included, the IESG is moving [RFC 954](#) to Historic status.

3. Security Considerations

Moving [RFC 954](#) to historic ends the application of DCA user data disclosure practices (unrestricted) to non-DCA Network Information Centers. Unrestricted access to NIC user registration data is a significant cause of limited user trust in network security, hence in a trustable network. Unrestricted access to NIC user registration data gives rise to excessive load on NIC user registration data services, excessive load on mail relays via unsolicited bulk email, and related abuses.
