## NVO3 Requirements Versus Available Protocol Capabilities draft-chen-nvo3-gap-analysis-00

#### Abstract

This document matches candidate protocols against the NVO3 requirements. Based on the results, gaps are identified and further protocol work is recommended.

#### Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of <u>BCP 78</u> and <u>BCP 79</u>.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <u>http://datatracker.ietf.org/drafts/current/</u>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on August 22, 2013.

### **<u>1</u>**. Introduction

The charter of the NVO3 Working Group requires it to identify any gaps between the requirements it has identified and the available protocol solutions as a prerequisite to rechartering or concluding the Working Group if no gaps exist. The present document is intended to provide the required analysis. It provides a tabulation of the candidate protocols' ability to satisfy each requirement identified by the Working Group. Areas where further work is required to ensure that the requirements are met are identified.

Since the Working Group has yet to adopt documents describing requirements for the management and control planes, they are absent from the present version of this document. The data plane requirements are taken from [I\_D.dataplane\_requirements]. The initial candidate protocols are NVGRE [I\_D.NVGRE], VxLAN [I\_D.VxLAN], L2VPN [reference?], and L3VPN [reference?].

### **<u>1.1</u>**. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in <u>RFC 2119</u> [<u>RFC2119</u>].

### **<u>1.2</u>**. Abbreviations

This document uses the following abbreviations:

- NVO3: Network virtualization overlays
- L2VPN Layer 2 virtual private network
- L3VPN Layer 3 virtual private network
- NVE: Network virtualization edge
- VAP: Virtual access point
- VNI: Virtual network instance
- LAG: Link aggregation group
- ECMP: Equal cost multi-path
- DSCP: Differentiated services code point

ECN: Explicit congestion notification [RFC3168]

### 2. Management Requirements

To come.

## 3. Control Plane Requirements

To come.

### 4. Data Plane Requirements

In this section, the numbering of requirement headings is taken from the corresponding section numbers in [I\_D.dataplane\_requirements].

3.1. Virtual Access Points (VAPs)

+ Requirement	+   NVGRE	VxLAN	+   L2VPN	++   L3VPN   ++
MUST support VAP   identification				
1) Local interface   -	YES     -	-     -	-	-     -
2) Local interface + fields   in frame header	YES   			

## Table 1: VAP Identification Requirements

3.2. Virtual Network Instance (VNI)

+ Requirement	++   NVGRE	VxLAN	L2VPN	++   L3VPN
<pre>  VAP are associated with a   specific VNI at service   instantiation time. +</pre>	YES     YES   			++             ++

Table 2: VAP-VNI Association

3.2.1. L2 VNI

Internet-Draft

| NVGRE | V×LAN | L2VPN | L3VPN | | Requirement | L2 VNI MUST provide an | NO | | emulated Ethernet multipoint | | | service as if Tenant Systems | | are interconnected by a | | bridge (but instead by using | | a set of NVO3 tunnels). - | | --\_ 1 | Loop avoidance capability | | MUST be provided. 1 | --| In the absence of a | management or control plane, | | data plane learning MUST be | | used to populate forwarding | tables. - | 1 | When flooding is required, | either to deliver unknown | unicast, or broadcast or | multicast traffic, the NVE | | MUST either support ingress | | replication or multicast. | - | - | - | | In this latter case, the NVE | | MUST be able to build at | | least a default flooding tree | | per VNI. 

#### Table 3: L2 VNI Service

## 3.2.2. L3 VNI

Ι	L3 VNIs MUST support		YES		1		
	per-tenant forwarding						
	instance with IP addressing						
	isolation and L3 tunneling						
	for interconnecting instances						
	of the same VNI on NVEs.						
+		- +		+	-+	+	+

# Table 4: L3 VNI Service

3.3.1. NVO3 overlay header

Requirement   NVGRE	VxLAN	L2VPN	L3VPN
An NV03 overlay header MUSTYESbe included after the underlay tunnel header when forwarding tenant traffic.			

# Table 5: Overlay Header

## 3.3.1.1. Virtual Network Context Identification

Requirement         NVGRE   VxLAN   L2VPN   L3VPN           +++++++++++++++++++++++++++++++++	+				++
The overlay encapsulation         YES                                     header MUST contain a field   which allows the encapsulated   frame to be delivered to the   appropriate virtual network   endpoint by the egress NVE.	Requirement	NVGRE	VxLAN	L2VPN	L3VPN
	<pre>  The overlay encapsulation     header MUST contain a field     which allows the encapsulated     frame to be delivered to the     appropriate virtual network     endpoint by the egress NVE.</pre>	YES			

Table 6: Virtual Network Context Identification

3.3.1.2. Service QoS identifier

| NVGRE | V×LAN | L2VPN | L3VPN | | Requirement | Traffic flows originating | NO | | from different applications | | | could rely on differentiated | | | forwarding treatment to meet | | end-to-end availability and | | performance objectives. | +----+

Table 7: QoS Service Identification

### 3.3.2.1. LAG and ECMP

+----+ Hermiter Hermi

Table 8: Multipath Support

#### 3.3.2.2. DiffServ and ECN marking

| Requirement | NVGRE | VxLAN | L2VPN | L3VPN | +----+ | [<u>RFC2983</u>] defines two modes | NO | | for mapping the DSCP markings | | | from inner to outer headers | | and vice versa. Both models | | SHOULD be supported. | | | | - | - | - | - | | ECN marking MUST be performed | NO | | according to [<u>RFC6040</u>] which | | | describes the correct ECN | Ì | behavior for IP tunnels. 

Table 9: DSCP and ECN Marking

3.3.2.3. Handling of broadcast, unknown unicast, and multicast traffic

Internet-Draft

| NVGRE | V×LAN | L2VPN | L3VPN | | Requirement | NVO3 data plane support for | YES | | either ingress replication or | | | point-to- multipoint tunnels | | is required to send traffic | | destined to multiple | locations on a per-VNI basis | | (e.g. L2/L3 multicast | | traffic, L2 broadcast and | unknown unicast traffic). | | | +----+-

## Table 10: Handling of Broadcast, Unknown Unicast, and Multicast Traffic

### 3.4. External NVO3 connectivity

| Requirement | NVGRE | VxLAN | L2VPN | L3VPN | | NVO3 services MUST | YES | | interoperate with current VPN | | | and Internet services. This | | may happen inside one DC | | during a migration phase or | | | as NVO3 services are | | delivered to the outside | | world via Internet or VPN | | gateways. 

Table 11: Interoperation

### 3.5. Path MTU

 +----+
 NVGRE
 VxLAN
 L2VPN
 L3VPN

 | Classical ICMP-based MTU Path
 NO
 |
 |
 |

 | Discovery ([RFC1191],
 |
 |
 |
 |

 | [RFC1981]) or Extended MTU
 |
 |
 |
 |

 | such as defined in [RFC4821].
 |
 |
 |
 |

	Segmentation and reassembly		YES		l		I
	support from the overlay						I
	layer operations without						I
	relying on the Tenant Systems						I
	to know about the end-to-end						I
	MTU.						I
+ -		+		+	+	+	+

# Table 12: Path MTU

3.7. NVE Multi-Homing Requirements

+	++	+		++
Requirement	NVGRE	VxLAN	L2VPN	L3VPN
Multi-homing techniques   SHOULD be used to increase   the reliability of an NVO3   network.	NO         	   		

# Table 13: Multihoming

## 3.8. OAM

+	+	++	++	++
Requirement	NVGRE	VxLAN	L2VPN	L3VPN
+	+	+	+	++
NVE MAY be able to	NO			
originate/terminate OAM				
messages for connectivity				
verification, performance				
monitoring, statistic				
gathering and fault				
isolation. Depending on				
configuration, NVEs SHOULD be				
able to process or				
transparently tunnel OAM				
messages, as well as				
supporting alarm propagation				
capabilities.				
+	+	+	+	++

# Table 14: OAM Messaging

### 5. Summary and Conclusions

To come.

#### <u>6</u>. Acknowledgements

Peter Ashwood-Smith and Rangaraju Iyengar are acknowledged for their technical contributions to this document. Tom Taylor served as XML2RFC guru to produce it.

#### 7. IANA Considerations

This memo includes no request to IANA.

### 8. Security Considerations

All drafts are required to have a security considerations section.
