**xCal: The XML format for iCalendar**  
**draft-daboo-et-al-icalendar-in-xml-05**

## Abstract

This specification defines "xCal", an XML format for iCalendar data.

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 14, 2011.

## Copyright Notice

Copyright (c) 2010 IETF Trust and the persons identified as the document authors. All rights reserved.

This document is subject to [BCP 78](#) and the IETF Trust's Legal Provisions Relating to IETF Documents (<http://trustee.ietf.org/license-info>) in effect on the date of publication of this document. Please review these documents carefully, as they describe your rights and restrictions with respect to this document. Code Components extracted from this document must include Simplified BSD License text as described in Section 4.e of the Trust Legal Provisions and are provided without warranty as described in the Simplified BSD License.

## **1. Introduction**

The iCalendar data format [[RFC5545](#)] is a widely deployed interchange format for calendaring and scheduling data. While many applications and services consume and generate calendar data, iCalendar is a specialized format that requires its own parser/generator. In contrast, XML-based formats are widely used for interoperability between applications, and the many tools that generate, parse, and manipulate XML make it easier to work with than iCalendar.

The purpose of this specification is to define "xCal", an XML format for iCalendar data. xCal is defined so that iCalendar data to be converted to XML, and then back to iCalendar, without losing any semantic meaning in the data. Anyone creating XML calendar data according to this specification will know that their data can be converted to a valid iCalendar representation as well.

Two key design considerations are:

Round-tripping (converting an iCalendar instance to XML and back) will give the same result as the starting point.

Preserve the semantics of the iCalendar data. While a simple consumer can easily browse the calendar data in XML, a full understanding of iCalendar is still required in order to modify and/or fully comprehend the calendar data.

## **2. Conventions Used in This Document**

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

When XML element types in the namespace "urn:ietf:params:xml:ns:icalendar-2.0" are referenced in this document outside of the context of an XML fragment, the string "ICAL:" will be prefixed to the element types.

Some examples in this document contain "partial" XML documents used for illustrative purposes. In these examples, three periods "..." are used to indicate a portion of the document that has been removed for compactness.

## **3. Converting from iCalendar to xCal**

This section describes how iCalendar data is converted to XML using a simple mapping between the iCalendar data model and XML elements.

Daboo, et al.

Expires January 14, 2011

[Page 3]

### [3.1. Pre-processing](#)

iCalendar uses a line folding mechanism to limit lines of data to a maximum line length (typically 72 characters) to ensure maximum likelihood of preserving data integrity as it is transported via various means (e.g., email) - see [Section 3.1 of \[RFC5545\]](#). Prior to converting iCalendar data into XML all folded lines MUST be unfolded.

iCalendar data uses an "escape" character sequence for text values and parameter values. When such text elements are converted into XML the escaping MUST be removed.

iCalendar uses a base64 encoding for binary data. The base64 encoding MUST remain when converted to XML.

### [3.2. iCalendar stream \(\[RFC5545 section 3.4\]\(#\)\)](#)

At the top level of the iCalendar object model is an "iCalendar stream". This object encompasses multiple "iCalendar objects". In XML, the entire stream is contained in the root ICAL:icalendar XML element.

An iCalendar stream can contain one or more iCalendar objects. Each iCalendar object, delimited by BEGIN:VCALENDAR and END:VCALENDAR, is enclosed by the ICAL:vcalendar XML element.

Example:

```
<?xml version="1.0" encoding="utf-8"?>
<icalendar xmlns="urn:ietf:params:xml:ns:icalendar-2.0">
  <vcalendar>
    ...
  </vcalendar>
</icalendar>
```

iCalendar objects are comprised of a set of "components", "properties", "parameters" and "values". A "component" can contain other "components" or "properties". A "property" has a value and optionally a set of "parameters".

In xCal, "components" are contained within an ICAL:components XML element. With that element, another ICAL:components element could appear (representing components nested within components) or the ICAL:properties XML element could appear. ICAL:properties is used to encapsulate iCalendar properties.

Each iCalendar property will be mapped to its own XML element as described below. Within each of these elements there is an optional

Daboo, et al.

Expires January 14, 2011

[Page 4]

ICAL:parameters XML element used to encapsulate any iCalendar parameters. Additionally there will be one or more XML elements representing the value of the iCalendar property.

Example:

```
<?xml version="1.0" encoding="utf-8"?>
<icalendar xmlns="urn:ietf:params:xml:ns:icalendar-2.0">
  <vcalendar>
    <properties>
      ...
    </properties>
    <components>
      ...
    </components>
  </vcalendar>
</icalendar>
```

Item	XML element	XML Definition
iCalendar Stream	ICAL:icalendar	<a href="#">Appendix A</a> # 3.4
VCALENDAR	ICAL:vcalendar	<a href="#">Appendix A</a> # 3.6

### [3.3. Components \(RFC5545 section 3.6\)](#)

Each calendar component in the VCALENDAR object, delimited by BEGIN and END, will be converted to an enclosing XML element with the same name, but in lowercase:

Component	XML element	XML Definition
VEVENT	ICAL:vevent	<a href="#">Appendix A</a> # 3.6.1
VTODO	ICAL:vtodo	<a href="#">Appendix A</a> # 3.6.2
VJOURNAL	ICAL:vjournal	<a href="#">Appendix A</a> # 3.6.3
VFREEBUSY	ICAL:vfreebusy	<a href="#">Appendix A</a> # 3.6.4
VTIMEZONE	ICAL:vtimezone	<a href="#">Appendix A</a> # 3.6.5
STANDARD	ICAL:standard	<a href="#">Appendix A</a> # 3.6.5
DAYLIGHT	ICAL:daylight	<a href="#">Appendix A</a> # 3.6.5
VALARM	ICAL:valarm	<a href="#">Appendix A</a> # 3.6.6

Daboo, et al.

Expires January 14, 2011

[Page 5]

### **3.4. Properties ([RFC5545 section 3.7](#) and 3.8)**

iCalendar properties , whether they apply to the VCALENDAR object or to a component, are handled in a consistent way in the xCal format.

iCalendar properties are enclosed in the XML element ICAL:properties.

Each individual iCalendar property is represented in XML by an element of the same name as the iCalendar property, but in lowercase. For example, the CALSCALE property is represented in XML by the ICAL:calscale element.

Example:

```
<?xml version="1.0" encoding="utf-8"?>
<icalendar xmlns="urn:ietf:params:xml:ns:icalendar-2.0">
  <vcalendar>
    <properties>
      <calscale>...</calscale>
      <version>...</version>
      <prodid>...</prodid>
    </properties>
    <components>
      ...
    </components>
  </vcalendar>
</icalendar>
```

Each property can contain an ICAL:parameters XML element encapsulating any iCalendar parameters associated with the iCalendar property.

Each property will contain one or more "value" XML elements as described below representing the value of the iCalendar property.

Property	XML element	XML Definition
CALSCALE	ICAL:calscale	<a href="#">Appendix A</a> # 3.7.1

### [3.4.1. Special Cases for Properties](#)

Some properties in iCalendar can contain "structured" value data. This includes lists of "standard" value types, as well as values with specific "fields". In xCal, these "structured" values are represented as separate XML elements in various ways for ease of processing using standard XML tools.

Daboo, et al.

Expires January 14, 2011

[Page 7]

### [3.4.1.1.](#) Multi-valued Properties

The following iCalendar properties can have values that consist of a list of "standard" iCalendar values separated by a specific delimiter. In XML these properties are represented by an XML element that contains multiple "value" elements ([Section 3.6](#)).

Property	XML element	XML Definition
CATEGORIES	ICAL:categories	<a href="#">Appendix A</a> # 3.8.1.2
RESOURCES	ICAL:resources	<a href="#">Appendix A</a> # 3.8.1.10
FREEBUSY	ICAL:freebusy	<a href="#">Appendix A</a> # 3.8.2.6
EXDATE	ICAL:exdate	<a href="#">Appendix A</a> # 3.8.5.1
RDATE	ICAL:rdate	<a href="#">Appendix A</a> # 3.8.5.2

### [3.4.1.2.](#) GEO Property

In iCalendar, the GEO property value is defined as a semi-colon separated list of two FLOAT values, the first representing latitude and the second longitude.

In xCal, the value for the ICAL:geo element is represented by an ICAL:value element containing an ICAL:latitude element and an ICAL:longitude element, each of which contain text values representing the FLOAT values. See [Appendix A](#) # 3.8.1.6.

### [3.4.1.3.](#) REQUEST-STATUS Property

In iCalendar, the REQUEST-STATUS property value is defined as a semi-colon separated list of two or three TEXT values. The first represents a code, the second a description, and the third (optional) additional data.

In xCal, the value for the ICAL:request-status element is represented by an ICAL:value element containing an ICAL:code element, and ICAL:description element, and optionally an ICAL:data element, each of which contain the corresponding TEXT values. See [Appendix A](#) # 3.8.8.3.

## [3.5.](#) Parameters ([RFC5545 section 3.2](#))

iCalendar parameters are enclosed in the XML element ICAL:parameters which optionally occurs once in each property XML element.

Each individual iCalendar parameter is represented in xCal by an element of the same name as the iCalendar parameter, but in

Daboo, et al.

Expires January 14, 2011

[Page 8]

lowercase. For example, the PARTSTAT parameter is represented in XML by the ICAL:partstat element.

Example:

```
<?xml version="1.0" encoding="utf-8"?>
<icalendar xmlns="urn:ietf:params:xml:ns:icalendar-2.0">
  <vcalendar>
    ...
    <components>
      ...
      <attendee>
        <parameters>
          <partstat>NEEDS-ACTION</partstat>
        </parameters>
      ...
    </components>
  </vcalendar>
</icalendar>
```

Each parameter contains either text, or one or more child XML elements representing iCalendar value types.

Parameter	XML element	XML Definition
ALTREP	ICAL:altrep	<a href="#">Appendix A</a> # 3.2.1
CN	ICAL:cn	<a href="#">Appendix A</a> # 3.2.2

Expires January 14, 2011

[Page 9]

### [3.5.1. VALUE parameter](#)

iCalendar defines a VALUE parameter ([Section 3.2.20 of \[RFC5545\]](#). This parameter is not mapped to an xCal XML element. Instead, the value type is handled by having different XML elements for each value, and these appear inside of ICAL:property elements. Thus, when converting from iCalendar to XML, any VALUE parameters are skipped. When converting from XML into iCalendar, the appropriate VALUE parameter MUST be included in the iCalendar property if the value type is not the default value type for that property.

## [3.6. Values \(RFC5545 section 3.3\)](#)

iCalendar value types are mapped into XML elements with a matching name in all lowercase. In some cases, iCalendar defines "structured" values and these are mapped into separate child elements in each value element, as described by the simple DTD definitions below.

Some properties allow for multiple values and these are represented by separate matching value XML elements.

### [3.6.1. Binary \(RFC5545 section 3.3.1\)](#)

Description: iCalendar BINARY property values are represented by the ICAL:binary XML element. The content of the element is base64 encoded data. Whitespace MAY be inserted into the data at any point to "wrap" the data to reasonable line lengths. When converting back to iCalendar the whitespace MUST first be removed.

XML Definition: [Appendix A](#) # 3.3.1

### [3.6.2. Boolean \(RFC5545 section 3.3.2\)](#)

Description: iCalendar BOOLEAN property values are represented by the ICAL:boolean XML element. The content of the element is text containing either of "TRUE" or "FALSE".

XML Definition: [Appendix A](#) # 3.3.2

### [3.6.3. Calendar User Address \(RFC5545 section 3.3.3\)](#)

Description: iCalendar CAL-ADDRESS property values are represented by the ICAL:cal-address XML element. The content of the element is a URI.

Daboo, et al.

Expires January 14, 2011

[Page 10]

XML Definition: [Appendix A](#) # 3.3.3

#### **[3.6.4. Date \(RFC5545 section 3.3.4\)](#)**

Description: iCalendar DATE property values are represented by the ICAL:date XML element. The content of the element is the same date value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.4

#### **[3.6.5. Date-Time \(RFC5545 section 3.3.5\)](#)**

Description: iCalendar DATE-TIME property values are represented by the ICAL:date-time XML element. The content of the element is the same date-time value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.5

#### **[3.6.6. Duration \(RFC5545 section 3.3.6\)](#)**

Description: iCalendar DURATION property values are represented by the ICAL:duration XML element. The content of the element is the same duration value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.6

#### **[3.6.7. Float \(RFC5545 section 3.3.7\)](#)**

Description: iCalendar FLOAT property values are represented by the ICAL:float XML element. The content of the element is a text representation of a floating point number.

XML Definition: [Appendix A](#) # 3.3.7

#### **[3.6.8. Integer \(RFC5545 section 3.3.8\)](#)**

Description: iCalendar INTEGER property values are represented by the ICAL:integer XML element. The content of the element is a text representation of an integer number.

XML Definition: [Appendix A](#) # 3.3.8

#### **[3.6.9. Period of Time \(RFC5545 section 3.3.9\)](#)**

Description: iCalendar PERIOD property values are represented by the ICAL:period XML element. The content of the element is the same period value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.9

### **3.6.10. Recurrence Rule ([RFC5545 section 3.3.10](#))**

Description: iCalendar RECUR property values are represented by the ICAL:recur XML element. The content of the element is child elements representing the various components of a recurrence rule.

XML Definition: [Appendix A](#) # 3.3.10

### **3.6.11. Text ([RFC5545 section 3.3.11](#))**

Description: iCalendar TEXT property values are represented by the ICAL:text XML element. The content of the element is simple text.

XML Definition: [Appendix A](#) # 3.3.11

### **3.6.12. Time ([RFC5545 section 3.3.12](#))**

Description: iCalendar TIME property values are represented by the ICAL:time XML element. The content of the element is the same time value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.12

### **3.6.13. URI ([RFC5545 section 3.3.13](#))**

Description: iCalendar URI property values are represented by the ICAL:uri XML element. The content of the element is a URI.

XML Definition: [Appendix A](#) # 3.3.13

### **3.6.14. UTC Offset ([RFC5545 section 3.3.14](#))**

Description: iCalendar UTC-OFFSET property values are represented by the ICAL:utc-offset XML element. The content of the element is the same UTC offset value specified by [RFC5545](#).

XML Definition: [Appendix A](#) # 3.3.14

### **3.7. Extensions**

iCalendar extension properties and parameters (those with an "X-" prefix in their name) are handled in the same way as other properties and parameters: the property or parameter is represented by an XML element with the same name, but in lowercase. e.g., the "X-FOO" property in iCalendar turns into the ICAL:x-foo element in XML.

## **4. Converting from XML into iCalendar**

When converting component, property and parameter values, the names SHOULD be converted to uppercase. Although iCalendar names are case insensitive, common practice is to keep them all uppercase following the actual definitions in [[RFC5545](#)].

Backslash escaping and line folding MUST be applied to the resulting iCalendar data as required by [[RFC5545](#)].

### **4.1. Converting XML Extensions into iCalendar**

XML extensions are converted back to iCalendar in one of two ways, depending on whether the extensions are in the iCalendar XML namespace, or in an external namespace.

Extensions that are part of the iCalendar XML namespace MUST have element names that begin with "x-", and will be converted back to the equivalent extension property in iCalendar. For example, the "x-foo" element will convert to the "X-FOO" iCalendar property.

Extensions that are in a namespace other than the iCalendar XML namespace SHOULD be preserved in the iCalendar representation using the XML iCalendar property described in [Section 4.2](#).

### **4.2. The XML property for iCalendar**

This section describes an extension property for iCalendar, as covered in [section 8.2.3 of \[RFC5545\]](#).

Property name: XML

Purpose: To embed XML-encoded calendar data in the iCalendar format.

Value type: A single text value.

Property parameters: VALUE, ENCODING.

Conformance: The property can appear on any iCalendar component.

Daboo, et al.

Expires January 14, 2011

[Page 13]

Description: The value of this property is an XML element. The XML property MUST NOT be used to contain properties that are already defined in iCalendar, or properties that use the "X-" iCalendar extension property syntax. Since all elements in the urn:ietf:params:xml:ns:icalendar-2.0 namespace convert to a well-defined iCalendar object, the elements in this property MUST NOT be in the urn:ietf:params:xml:ns:icalendar-2.0 namespace. The XML element which is the value of this property MUST have an XML namespace declaration.

Note that the source XML may contain characters not allowed in iCalendar such as control characters. If this is the case, then the XML data MUST be base64 encoded. As required by [[RFC5545](#)], the ENCODING parameter MUST be present and set to "BASE64", and the VALUE parameter must be present and set to "BINARY".

There can be more than one XML property present for a given iCalendar object. The ordering of XML properties is not preserved in the conversion between XML and iCalendar.

Format definition: This property is defined by the following notation:

```
xml = "XML:" text CRLF
```

Example: The following is an example of an iCalendar event with a location embedded in KML markup inside the XML property.

```
BEGIN:VCALENDAR
CALSCALE:GREGORIAN
PRODID:-//Example Inc.//Example Calendar//EN
VERSION:2.0
BEGIN:VEVENT
DTSTAMP:20080205T191224Z
DTSTART:20081006
SUMMARY:Planning meeting
UID:4088E990AD89CB3DBB484909
XML:<kml xmlns="http://www.opengis.net/kml/2.2">...</kml>
END:VEVENT
END:VCALENDAR
```

## **5. Security Considerations**

This extension does not introduce any new security concerns than those already described in iCalendar.

Daboo, et al.

Expires January 14, 2011

[Page 14]

## **6. IANA Considerations**

This document defines a new URN to identify a new XML namespace for iCalendar data. The URN conforms to a registry mechanism described in [[RFC3688](#)].

This document defines a new media type. The registration is in [Section 6.2](#).

This document defines a new property for iCalendar. The registration is in [Section 4.2](#).

### **6.1. Namespace Registration**

Registration request for the iCalendar namespace:

URI: urn:ietf:params:xml:ns:icalendar-2.0

Registrant Contact: See the "Authors' Addresses" section of this document.

XML: None. Namespace URIs do not represent an XML specification.

### **6.2. Media Type**

This section defines the MIME media type for use with iCalendar in XML data.

To: ietf-types@iana.org

Subject: Registration of media type application/xml+calendar

Type name: application

Subtype name: calendar+xml

Required parameters: none

Optional parameters: charset, method, component and optinfo as defined for the text/calendar media type

Encoding considerations: iCalendar data is typically UTF-8 and thus the XML representation will follow that. As a result, for 7-bit transports, data in UTF-8 MUST be encoded in quoted-printable or base64.

Security considerations: See [Section 5](#).

Interoperability considerations: This media type provides an alternative syntax to iCalendar data based on XML.

Published specification: This specification.

Applications which use this media type: Applications that currently make use of the text/calendar media type can use this as an alternative.

Additional information:

Magic number(s): None

File extension(s): XML data should use "xml" as the file extension.

Macintosh file type code(s): None specified.

Person & email address to contact for further information: See the "Author's Address" section of this document.

Intended usage: COMMON

Restrictions on usage: There are no restrictions on where this media type can be used.

Author: See the "Author's Address" section of this document.

Change controller: IETF

## [7. Acknowledgments](#)

This specification originated from the work of the XML technical committee of the Calendaring and Scheduling Consortium.

## **8.2. Informative References**

### **Appendix A. Relax NG Schema**

Below is a Relax NG schema for iCalendar in XML. This schema uses the compact notation of Relax NG. The numeric section numbers given in the comments refer to section in [RFC5545]. The ordering of elements follows the section ordering of [RFC5545].

The Relax NG compact notation "?" operator is used to indicate an unordered list of items. However, that operator, as defined, allows "mixing" each element that it operates on at any depth within the other elements, rather than just allowing "mixing" of siblings only. As a result, the schema provided allows certain constructs that are not allowed in iCalendar. Given that there is no sibling-only unordered list operator in RelaxNG, this is the best representation that can be given.

```
# Relax NG Schema for iCalendar in XML

## Appendix B. Example

Below is some example iCalendar data and its representation in XML as defined by this specification.

### B.1. iCalendar Data

```
BEGIN:VCALENDAR
CALSCALE:GREGORIAN
PRODID:-//Example Inc.//Example Calendar//EN
VERSION:2.0
BEGIN:VEVENT
DTSTAMP:20080205T191224Z
DTSTART:20081006
SUMMARY:Planning meeting
UID:4088E990AD89CB3DBB484909
END:VEVENT
END:VCALENDAR
```

## B.2. XML Data

```
<?xml version="1.0" encoding="utf-8"?>
<icalendar xmlns="urn:ietf:params:xml:ns:icalendar-2.0">
  <vcalendar>
    <properties>
      <calscale><text>GREGORIAN</text></calscale>
      <prodid>
        <text>-//Example Inc.//Example Calendar//EN</text>
      </prodid>
      <version><text>2.0</text></version>
    </properties>
    <components>
      <vevent>
        <properties>
          <dtstamp><date-time>20080205T191224Z</date-time></dtstamp>
          <dtstart><date>20081006</date></dtstart>
          <summary>
            <text>Planning meeting</text>
          </summary>
          <uid>
            <text>4088E990AD89CB3DBB484909</text>
          </uid>
        </properties>
      </vevent>
    </components>
  </vcalendar>
</icalendar>
```

## Appendix C. Change History (to be removed prior to publication as an RFC)

Changes from -04:

1. Added description to XML extension discussing how to handle binary data in XML.
2. Removed empty [Appendix B](#).

Changes from -03:

1. Changed the proposed MIME type from xml+calendar to calendar+xml.
2. Fixed several references to sections of [RFC5545](#).
3. Updated example in [Appendix C](#).

Daboo, et al.

Expires January 14, 2011

[Page 41]

4. Corrected the definition and grammar for TIME and UTC-OFFSET properties.

Changes from -02:

1. Removed the LINK extension and related sections. The concept will be addressed in a separate specification.
2. Various minor edits for clarity and consistency.

Changes from -01:

1. Added LINK extension to iCalendar and section discussing links in XML format.
2. Adopted "xCal" as the short name for the specification.

Changes from -00:

1. Changed 2445bis references to [RFC5545](#).
2. Added a version number to the XML namespace for iCalendar.
3. Changed the values for the date, date-time, period, and duration elements to exactly match the values specified in [RFC5545](#). Previously these were broken out into separate elements for day, month, year, etc.
4. Added specification for XML property in iCalendar.
