**Extensions to WHOis service to allow query on email identities
draft-emailaddressreg-whois-04**

Abstract

This document describes the need for a WHOis email address service similar to the internet domainname WHOis service. There's a need for a registered email address as opposed to non-registered email address to fight internet SPAM, as well as encouraging email use for personal, commercial and legal and all kinds of purposes. An internet user can have multiple email identities. This service implementation would also help deliver a Single SignON solution for WWW services.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on Aug 21, 2015.

[1. Introduction](#)

To implement a WHOis email address service in addition to WHOis domainname service.

[2. Background](#)

Currently a user can go to a service like <http://www.whois.net> and lookup a domainname. If i query explodingmoon.org It would output WHOIS Information for explodingmoon.org.

There has to be a way i can type in a valid email address as well as input to WHOis service. Currently no such email directory exists.

3. General Information of the service

A user is likely to have several email addresses that he or she uses. A concept of primary email address can be used for the Whois service. I am pradeep@explodingmoon.org as well as pradeepan88@hotmail.com and pradeepugimwidnaus@yahoo.com.

A user should be able to register his or her email address with WHOis registry and add other details about them.

A location field of the email address can be used to implement email security. if my email is pradeep@explodingmoon.org and i give my location as Thailand, my email service provider can provide me additional security by restricting access from netherlands. There could be any level of details. Registration of email addresses in the registry can be via email or via webforms. A user choses what information he or she choses to reveal. I can chose to reveal my

contact

information. If I am pradeep@microsoft.com and i no longer have access to microsoft.com because of leaving the company, a User can still can query Whois pradeep@microsoft.com and get other email addresses to continue any transactions.

I am a traveller suffering in nepal because i do not have seed cash to handle many cash offers to my email address. I am now in a guest house, tibetguesthouse.com and i owe them some dollars, one dollar is 100 Nepali rupee. I send them an email with my Course on self

exploration

and investment proposal to help me get to Thailand. Even if they cannot help as an investor, theres no way they can know that i am some one who created wealth and have to complete some pending transactions. In my emails, whose password i do not want to share as an individual wanting to keep my individuality ,theres pending transaction from South Africa of 950000 US dollars, From citibank UK customers of more

than

10 million and from HSBC bank customers of more than 10 million US dollars. I am at risk of being held hostage because i owe a 100 dollars as they do not have any way to check through an email registry of some contacts who can verify me as someone who of a certain amount of personal wealth. The US Immigration has already tortured me.

I am a globe trotter hopper wanting an email registry service so some

tribal

jurisdiction cannot harm me with their corrupt police stations. I was

detained

couple of times in Immigration detentions where there was no way to use email or WWW and i cannot forgive them, they are uneducated wanting to use archaic laws and loopholes to harm wealthy beings using groups that wont change their corrupt ways.

if i do a Whois of pradeepan88@hotmail.com in addition to my publicly available information theres should be a credit agency that can be contacted by email to know how much credit worthy i am. The United States Social security system is abusing me and has abused me using some criminal western medical practitioners already. I am a bankrupt according to them and they are using corrupt United States government authorities and corrupt Indian government authorities and corrupt and clever Immigration authorities to murder me in palakkad,

and

then some strange relatives can claim my emails. I have reported that i need help to ic3.gov and its a US only service. The private parties that has pending transactions to my email should be forced to inform the credit agencies that this email is worth this much.

Its probably still possible to telnet into a mailserver and send emails and this is being exploited by many cybercriminals to SPAM email identities.

I am a victim of attacks because many criminals collecting money on my behalf and when i tried to collect it, they have to discourage it as SPAM. There should be someway this way of sending emails is not abused.

SPAMMERS or those who dont comply with rules set by agencies like ic3.gov should be prevented from using internet.

There should be a way to send money to an EMail from a money order service.

I should be able to go into a Money order location and send money to an email address. I am not getting money from either paypal or Western Union because of of an ongoing financial crime.

There should be a policy on WWW email services by internet authorities. It should

allow only single logins and if the email identity has a clearance or need to be in a certain IP range to view emails it need to be known to the email user.

I should be able to know that i am in Rishikesh now and i would not be able to see many emails while in public internet centers and i would have to go to Delhi or

Thailand or US to see 50 more emails. Again theres no way i can associate additional

restrictions on an email identity now. Hotmail.com allowed me to create

an account

but i should be able to associate my photo or a fingerprint with it and authenticate

to be compared with information available in whois
pradeepan88@hotmail.com that only

pradeepan88@Hotmail.com can upload. Right now criminals working as US Immigration or

Thai Immigration can hold someone like me hostage and login to emails using some lawyers

and steal and expend anothers wealth.

5.Acknowledgement

I have been a publisher of <http://www.dhyanayoga.info> since 2004/2005 and <http://www.explodingmoon.org> since 2008. I have used bluehost.com for hosting my website and have found the need to know who views my site, their email addresses and not just IP address. Also i have been using services of hotmail.com, yahoo.com, facebook.com and found the need for a Single SignON to the WWW and an email registry and a concept of primary email address is a precursor to that implementation.
