An I2RS BGP Data Model
draft-hares-i2rs-bgp-dm-00.txt

Abstract

This document introduces a yang data for i2RS BGP protocol and network policy that aligns with the I2RS BGP use cases. This draft utilizes the general Policy based routing structured found in the RIB Information Model (IM) and Policy Base Policy.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on April 18, 2015.

[1. Introduction](#)

The Interface to the Routing System (I2RS) provides read and write access to the information and state within the routing process within routing elements via protocol message exchange between an I2RS Client and an I2RS Agent associated with the a routing system. The [[I-D.ietf-i2rs-architecture](#)] describes the basic interactions of this exchange. One of the important functions of this messages exchange is for the I2RS client to interact with one or more I2RS agents to collect information from network routing systems.

One of the key information pieces that I2RS clients may collect from I2RS agents is the BGP information regarding BGP peers, BGP routes, and network topologies created within BGP. This document introduces a basic information model for BGP policies. This policy model can be linked with other information models such as the I2RS RIB informational model [[I-D.ietf-i2rs-rib-info-model](#)], and uses the generic policy found in the Policy Routing modules in [[I-D.hares-i2rs-bnp-info-model](#)]. This basic BGP Information Model is an extendable policy model is a product of the industry approach to I2RS.

[2. Definitions and Acronyms](#)

BGP: Border Gateway Protocol

Information Model: An abstract model of a conceptual domain, independent of a specific implementation or data representation

NETCONF: The Network Configuration Protocol as defined in [[RFC6536](#)]

RESTCONF: The REST-like protocol that provides a programmatic interface over HTTP for accesing data defined in YANG, using datastores defined in NETCONF Protocol [[I-D.ietf-netconf-restconf](#)] as defined in RBNF: Routing Backus-Naur Form [[RFC5511](#)].

[3. BGP Yang top-level description](#)

Below is the full BGP Yang top-level description for the configuration portion of I2RS configuration model. Additional information on the structure of the information model is described in [[I-D.hares-i2rs-bnp-info-model](#)].

```
module: bgp-protocol
  +-rw bgp-protocol
    +-rw router-id?                      inet:ip-address
