**YANG Data Model for Monitoring I2NSF Network Security Functions
draft-hong-i2nsf-nsf-monitoring-data-model-02**

Abstract

This document proposes a YANG data model for monitoring Network Security Functions (NSFs) in the Interface to Network Security Functions (I2NSF) system. If the monitoring of NSFs is performed in a comprehensive way, it is possible to detect the indication of malicious activity, anomalous behavior or the potential sign of denial of service attacks in a timely manner. This monitoring functionality is based on the monitoring information that is generated by NSFs. Thus, this document describes not only a data tree to specify an information model for monitoring NSFs, but also the corresponding YANG data model for monitoring NSFs.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on September 6, 2018.

1. Introduction

This document defines a YANG [RFC6020] data model for monitoring Network Security Functions (NSFs). This monitoring means the aquisition of vital information about NSFs via notifications, events, records or counters. The data model for the monitoring presented in this document is derived from the information model for monitoring NSFs through the NSF-Facing Interface specified in

[[i2nsf-monitoring-im](#)].

2. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

3. Terminology

This document uses the terminology described in [\[i2nsf-terminology\]](#)[\[i2nsf-framework\]](#). Especially, the following terms are from [\[i2nsf-monitoring-im\]](#).

- o Information Model: An information model is a representation of concepts of interest to an environment in a form that is independent of data repository, data definition language, query language, implementation language, and protocol.
- o Data Model: A data model is a representation of concepts of interest to an environment in a form that is dependent on data repository, data definition language, query language, implementation language, and protocol.

3.1. Tree Diagrams

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in these diagrams [\[i2rs-rib-data-model\]](#) is as follows:

- o Brackets "[" and "]" enclose list keys.
- o Abbreviations before data node names: "rw" means configuration (read-write) and "ro" state data (read-only).
- o Symbols after data node names: "?" means an optional node and "*" denotes a "list" and "leaf-list".
- o Parentheses enclose choice and case nodes, and case nodes are also marked with a colon (":").
- o Ellipsis ("...") stands for contents of subtrees that are not shown.

4. Information Model Structure

Figure 1 shows the overview of a structure tree of monitoring information based on the [\[i2nsf-monitoring-im\]](#).

[Appendix A. draft-hong-i2nsf-nsf-monitoring-data-model-02](#)

The following changes are made from [draft-hong-i2nsf-nsf-monitoring-data-model-01](#):

1. The YANG data model is defined in more detail based on the information model for monitoring NSFs.
2. Some of descriptions for YANG data model are revised.
3. Typos and grammatical errors are corrected.
