**Object Identifier Registry for the
Long-Term Archive and Notary Services (LTANS) Working Group
draft-housley-ltans-oids-00**

Abstract

When the Long-Term Archive and Notary Services (LTANS) Working Group was chartered, an object identifier arc was set aside for use by that working group. This document describes the object identifiers that were assigned, and it establishes IANA allocation policies for any future assignments within that arc.

Status of this Memo

This Internet-Draft is submitted to IETF in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at
<http://www.ietf.org/lid-abstracts.html>

The list of Internet-Draft Shadow Directories can be accessed at
<http://www.ietf.org/shadow.html>

[1.](#) Introduction

When the Long-Term Archive and Notary Services (LTANS) Working Group was chartered, an object identifier arc was set aside for use by that working group. These object identifiers are primarily used with Abstract Syntax Notation One (ASN.1) [[ASN1-88](#)] [[ASN1-97](#)].

The LTANS object identifier arc is:

```
id-ltans OBJECT IDENTIFIER ::= { iso(1) identified-organization(3)
                                dod(6) internet(1) security(5)
                                mechanisms(5) ltans(11) }
```

This document describes the object identifiers that were assigned, and it establishes IANA allocation policies for any future assignments within that arc

[2.](#) Subordinate Object Identifier Arcs

Three subordinate object identifier arcs were used. The first arc, id-mod, was used to assign ASN.1 module identifiers. The second arc, id-ct, was used to assign Cryptographic Message Syntax (CMS) content

types. The third arc, id-em, was set aside for Evidence Record Syntax (ERS) encryption methods.

```
id-mod  OBJECT IDENTIFIER ::= { id-ltans 0 }
id-ct   OBJECT IDENTIFIER ::= { id-ltans 1 }
id-em   OBJECT IDENTIFIER ::= { id-ltans 2 }
```

3. Module Identifiers

The Evidence Record Syntax (ERS) [[RFC4998](#)] includes two ASN.1 modules. Both modules define the same syntax, but one module uses the 1997 ASN.1 syntax, and the other module uses the 1988 ASN.1 syntax. These module identifiers are:

```
id-mod-ers          OBJECT IDENTIFIER ::= { id-mod 1 }
id-mod-ers-v1       OBJECT IDENTIFIER ::= { id-mod 1 1 }
id-mod-ers88        OBJECT IDENTIFIER ::= { id-mod 2 }
id-mod-ers88-v1     OBJECT IDENTIFIER ::= { id-mod 2 1 }
```

The Long-term Archive Protocol (LTAP) [[LTAP](#)] includes two ASN.1 modules. While this protocol was never published as an RFC, the module identifiers were assigned to facilitate implementation. Both modules define the same syntax, but one module uses the 1997 ASN.1 syntax, and the other module uses the 1988 ASN.1 syntax. These module identifiers are:

```
id-mod-ltap88       OBJECT IDENTIFIER ::= { id-mod 3 }
id-mod-ltap88-v1    OBJECT IDENTIFIER ::= { id-mod 3 1 }
id-mod-ltap         OBJECT IDENTIFIER ::= { id-mod 4 }
id-mod-ltap-v1      OBJECT IDENTIFIER ::= { id-mod 4 1 }
```

The document that describes the conventions for using Simple Certificate Validation Protocol (SCVP) to convey Long-term Evidence Records [[RFC5276](#)] includes one ASN.1 module. The module identifier is:

```
id-mod-ers-scvp     OBJECT IDENTIFIER ::= { id-mod 5 }
id-mod-ers-scvp-v1  OBJECT IDENTIFIER ::= { id-mod 5 1 }
```

The Data Structure for the Security Suitability of Cryptographic Algorithms (DSSC) [[RFC5698](#)] includes two ASN.1 modules. Both modules define the same syntax, but one module uses the 1997 ASN.1 syntax, and the other module uses the 1988 ASN.1 syntax. These module identifiers are:

```
id-mod-dssc88       OBJECT IDENTIFIER ::= { id-mod 6 }
id-mod-dssc88-v1    OBJECT IDENTIFIER ::= { id-mod 6 1 }
id-mod-dssc         OBJECT IDENTIFIER ::= { id-mod 7 }
```

```
id-mod-dssc-v1      OBJECT IDENTIFIER ::= { id-mod 7 1 }
```

4. CMS Content Types

A CMS content type for an Evidence Record was reserved, but no specification points to this value. It remains reserved.

```
id-ct-evidence-record OBJECT IDENTIFIER ::= { id-ct 1 }
```

The Data Structure for the Security Suitability of Cryptographic Algorithms (DSSC) [[RFC5698](#)] specifies three CMS content types. These CMS content types are:

```
id-ct-dssc-asn1      OBJECT IDENTIFIER ::= { id-ct 2 }
id-ct-dssc-xml        OBJECT IDENTIFIER ::= { id-ct 3 }
id-ct-dssc-tbsPolicy  OBJECT IDENTIFIER ::= { id-ct 6 }
```

The Long-term Archive Protocol (LTAP) [[LTAP](#)] defines two CMS content types. While this protocol was never published as an RFC, the CMS content types were assigned to facilitate implementation. These CMS content types are:

```
id-ct-LTAPRequest    OBJECT IDENTIFIER ::= { id-ct 4 }
id-ct-LTAPResponse    OBJECT IDENTIFIER ::= { id-ct 5 }
```

5. ERS Encryption Methods

An arc was set up for Evidence Record Syntax (ERS) encryption methods, and one object identifier was assigned. However, that object identifier is obsolete, and it should not be used.

```
id-em-enveloped-data OBJECT IDENTIFIER ::= { id-em 1 } -- obsolete
```

6. Security Considerations

This document populates an IANA registry, and it raise no new security considerations. The protocols that specify these values include the security considerations associated with their usage.

7. IANA Considerations

IANA is asked to update one registry table and create four additional tables.

7.1. Update to SMI Security for Mechanism Codes Registry

Please update the reference in the Long-Term Archive and Notary Services entry (decimal value 11) so that it points to this document.

7.2. Add SMI Security for LTANS Registry

Within the SMI-numbers registry, add a "SMI Security for LTANS (1.3.6.1.5.5.11)" table with three columns:

Decimal	Description	References
-----	-----	-----
0	module-identifiers	{This RFC}
1	cms-content-types	{This RFC}
2	ers-encryption-methods	{This RFC}

Future updates to this table require Expert Review or IESG Approval as defined in [[RFC5226](#)].

7.3. Add SMI Security for LTANS Module Identifier Registry

Within the SMI-numbers registry, add a "SMI Security for LTANS Module Identifier (1.3.6.1.5.5.11.0)" table with three columns:

OID Value	Description	References
-----	-----	-----
1.3.6.1.5.5.11.0.1	id-mod-ers	[RFC4998]
1.3.6.1.5.5.11.0.1.1	id-mod-ers-v1	[RFC4998]
1.3.6.1.5.5.11.0.2	id-mod-ers88	[RFC4998]
1.3.6.1.5.5.11.0.2.1	id-mod-ers88-v1	[RFC4998]
1.3.6.1.5.5.11.0.3	id-mod-ltap88	Reserved
1.3.6.1.5.5.11.0.3.1	id-mod-ltap88-v1	Reserved
1.3.6.1.5.5.11.0.4	id-mod-ltap	Reserved
1.3.6.1.5.5.11.0.4.1	id-mod-ltap-v1	Reserved
1.3.6.1.5.5.11.0.5	id-mod-ers-scvp	[RFC5276]
1.3.6.1.5.5.11.0.5.1	id-mod-ers-scvp-v1	[RFC5276]
1.3.6.1.5.5.11.0.6	id-mod-dssc88	[RFC5698]
1.3.6.1.5.5.11.0.6.1	id-mod-dssc88-v1	[RFC5698]
1.3.6.1.5.5.11.0.7	id-mod-dssc	[RFC5698]
1.3.6.1.5.5.11.0.7.1	id-mod-dssc-v1	[RFC5698]

Future updates to this table require Expert Review or IESG Approval as defined in [[RFC5226](#)].

7.4. Add SMI Security for LTANS CMS Content Type Registry

Within the SMI-numbers registry, add a "SMI Security for LTANS CMS Content Type (1.3.6.1.5.5.11.1)" table with three columns:

Decimal	Description	References
-----	-----	-----
1	id-ct-evidence-record	Reserved
2	id-ct-dssc-asn1	[RFC5698]
3	id-ct-dssc-xml	[RFC5698]
4	id-ct-LTAPRequest	Reserved
5	id-ct-LTAPResponse	Reserved
6	id-ct-dssc-tbsPolicy	[RFC5698]

Future updates to this table require Expert Review or IESG Approval as defined in [[RFC5226](#)].

7.5. Add SMI Security for LTANS CMS Content Type Registry

Within the SMI-numbers registry, add a "SMI Security for LTANS ERS Encryption Method (1.3.6.1.5.5.11.2)" table with three columns:

Decimal	Description	References
-----	-----	-----
1	id-em-enveloped-data	Reserved and Obsolete

Future updates to this table require Expert Review or IESG Approval as defined in [[RFC5226](#)].
