**YANG Data Model for IS-IS SRv6**  
**draft-hu-isis-srv6-yang-00**

## Abstract

This document defines a YANG data model that can be used to configure and manage IS-IS SRv6 [[I-D.bashandy-isis-srv6-extensions](#)].

## Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC 2119](#) [[RFC2119](#)].

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on February 1, 2019.

## [1. Overview](#)

YANG[RFC6020][RFC7950] is a data definition language used to define the contents of a conceptual data store that allows networked devices to be managed using NETCONF[RFC6241]. YANG is proving relevant beyond its initial confines, as bindings to other interfaces (e.g., REST) and encodings other than XML (e.g., JSON) are being defined. Furthermore, YANG data models can be used as the basis for implementation of other interfaces, such as CLI and programmatic APIs.

This document defines a YANG data model that can be used to configure and manage IS-IS SRv6 and it is an augmentation to the IS- IS YANG data model.

## [2. IS-IS SRv6](#)

This document defines a model for IS-IS SRv6 feature. It is an augmentation of the IS-IS base model.

The IS-IS SRv6 YANG module requires support for the base `srv6` module[I-D.raza-spring-srv6-yang], which defines the global `srv6` configuration independent of any specific routing protocol configuration, and support of IS-IS base model

### **3. IS-IS SRv6 configuration**

#### **3.1. SRv6 activation**

Activation of IS-IS SRv6 is done by setting the "enable" leaf to true. This triggers advertisement of SRv6 extensions based on the configuration parameters that have been setup using the base SRv6 module.

#### **3.2. Locator setting**

The basic SRv6 module defines the related locator leafs. When the IS-IS SRv6 module is enabled, set the locator by using the following strategy: firstly, it is reasonable to check whether the default locator is used, if not, to use the specified locator. The strategy is realized by adding the leaf "default-locator", "locator-name" .

#### **3.3. IP Fast reroute**

IS-IS SRv6 model augments the fast-reroute container under interface. It brings the ability to activate ipv6 TI-LFA (topology independent LFA).

### **4. IS-IS SRv6 YANG Module**

```

## **5. Security Considerations**

Configuration and state data defined in this document are designed to be accessed via the NETCONF protocol [[RFC6241](#)].

As IS-IS is an IGP protocol (critical piece of the network), ensuring stability and security of the protocol is mandatory for the network service.

Authors recommends to implement NETCONF access control model ([\[RFC6536\]](#)) to restrict access to all or part of the configuration to specific users.

## **6. Contributors**

TBD.

## **7. Acknowledgements**

TBD.

## **8. IANA Considerations**

The IANA is requested to assign two new URIs from the IETF XML registry ([\[RFC3688\]](#)). Authors are suggesting the following URI:

Hu, et al.

Expires February 1, 2019

[Page 18]

URI: urn:ietf:params:xml:ns.yang:ietf-isis-srv6  
Registrant Contact: IS-IS WG  
XML: N/A, the requested URI is an XML namespace

This document also requests one new YANG module name in the YANG Module Names registry ([[RFC6020](#)]) with the following suggestion :

name: ietf-isis-srv6  
namespace: urn:ietf:params:xml:ns.yang:ietf-isis-srv6 prefix: isis-srv6  
reference: RFC XXXX
