Affirmation of the Modern Paradigm for Standards draft-iab-modern-paradigm-00

Abstract

On 29 August 2012, the leaders of the IEEE Standards Association, the IAB, the IETF, the Internet Society, and the W3C signed a statement affirming the importance of a jointly developed set of principles establishing a modern paradigm for global, open standards. These principles have become known as the "OpenStand" principles. This document contains the text of the affirmation that was signed.

Status of this Memo

Expires: 6 April 2013

This Internet-Draft is submitted to IETF in full conformance with the provisions of \underline{BCP} 78 and \underline{BCP} 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at http://www.ietf.org/lid-abstracts.html

The list of Internet-Draft Shadow Directories can be accessed at http://www.ietf.org/shadow.html

1. Introduction

Over the past several decades, the global economy has realized a huge bounty due to the Internet and the World Wide Web. These could not have been possible without the innovations and standardization of many underlying technologies. This standardization occurred with great speed and effectiveness only because of key characteristics of a modern global standards paradigm. The affirmation below characterizes the principles that have led to this success as a means to ensure acceptance of standards activities that adhere to the principles.

These principles have become known as the "OpenStand" principles. This document contains the principles as well as the affirmation of those principles that was signed on 29 August 2012 by the leaders of the IEEE Standards Association, the IAB, the IETF, the Internet Society, and the W3C.

2. Modern Paradigm for Standards

We embrace a modern paradigm for standards where the economics of global markets, fueled by technological advancements, drive global deployment of standards regardless of their formal status.

In this paradigm standards support interoperability, foster global competition, are developed through an open participatory process, and are voluntarily adopted globally. These voluntary standards serve as building blocks for products and services targeted at meeting the needs of the market and consumer, thereby driving innovation. Innovation in turn contributes to the creation of new markets and the growth and expansion of existing markets.

Housley, et. al. Expires: 6 April 2013 [Page 2]

Participation in the modern paradigm demands:

- 1. Cooperation. Respectful cooperation between standards organizations, whereby each respects the autonomy, integrity, processes, and intellectual property rules of the others.
- 2. Adherence to principles. Adherence to the five fundamental principles of standards development:
 - * Due process. Decisions are made with equity and fairness among participants. No one party dominates or guides standards development. Standards processes are transparent and opportunities exist to appeal decisions. Processes for periodic standards review and updating are well defined.
 - * Broad consensus. Processes allow for all views to be considered and addressed, such that agreement can be found across a range of interests.
 - * Transparency. Standards organizations provide advance public notice of proposed standards development activities, the scope of work to be undertaken, and conditions for participation. Easily accessible records of decisions and the materials used in reaching those decisions are provided. Public comment periods are provided before final standards approval and adoption.
 - * Balance. Standards activities are not exclusively dominated by any particular person, company or interest group.
 - * Openness. Standards processes are open to all interested and informed parties.
- 3. Collective empowerment. Commitment by affirming standards organizations and their participants to collective empowerment by striving for standards that:
 - * are chosen and defined based on technical merit, as judged by the contributed expertise of each participant;
 - * provide global interoperability, scalability, stability, and resiliency;
 - * enable global competition;
 - * serve as building blocks for further innovation; and
 - * contribute to the creation of global communities, benefiting humanity.

Housley, et. al. Expires: 6 April 2013 [Page 3]

- 4. Availability. Standards specifications are made accessible to all for implementation and deployment. Affirming standards organizations have defined procedures to develop specifications that can be implemented under fair terms. Given market diversity, fair terms may vary from royalty-free to fair, reasonable, and non-discriminatory terms (FRAND).
- 5. Voluntary adoption. Standards are voluntarily adopted and success is determined by the market.

3. Affirmation

We embrace a modern paradigm for standards where the economics of global markets, fueled by technological advancements, drive global deployment of standards regardless of their formal status.

In this paradigm standards support interoperability, foster global competition, are developed through an open participatory process, and are voluntarily adopted globally. These voluntary standards serve as building blocks for products and services targeted at meeting the needs of the market and consumer, thereby driving innovation. Innovation in turn contributes to the creation of new markets and the growth and expansion of existing markets.

By signing this statement, we affirm our support for and adherence to these principles.

Lynn St.Amour President and CEO Internet Society

Russ Housley Chair Internet Engineering Task Force

Bernard Aboba Chair Internet Architecture Board

Jeff Jaffe CEO W3C

Steve Mills President IEEE Standards Association Housley, et. al. Expires: 6 April 2013 [Page 4]

4. Call for Endorsement

We invite other standards organizations, governments, corporations and technology innovators globally to support these principles. You can publicly show your support at http://www.open-stand.org.

Security Considerations

Nothing in this document directly affects the security of the Internet.

6. IANA Considerations
