The application/atom+xml Type Parameter
draft-ietf-atompub-typeparam-00.txt

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on June 30, 2007.

Abstract

The Atom Syndication Format ([RFC 4287](#)) defines the 'application/atom+xml' media type to identify both Atom Feed and Atom Entry Documents. This document defines an optional 'type' parameter used to differentiate the two types of Atom documents.

Editorial Note

To provide feedback on this Internet-Draft, join the atom-protocol mailing list (<http://www.imc.org/atom-protocol/index.html>) [1].

Internet-Draft The application/atom+xml Type Parameter December 2006

[1.](#) Introduction

The Atom Syndication Format [[RFC4287](#)] defines two types of documents that can be identified using the 'application/atom+xml' media type. Implementation experience has demonstrated, however, that Atom Feed and Entry Documents can have different processing models and there are situations where they need to be differentiated.

[2.](#) Notational Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

[3.](#) The 'type' parameter

This document defines a new "type" parameter for use with the 'application/atom+xml' media type.
type = "entry" / "feed"

Neither the parameter name nor its value are case sensitive.

The value 'entry' indicates that the media type identifies an Atom Entry Document. The root element of the document MUST be atom:entry.

The value 'feed' indicates that the media type identifies an Atom Feed Document. The root element of the document MUST be atom:feed.

If not specified, the type is assumed to be unspecified, requiring Atom processors to examine the root element to determine the type of Atom document.

[4.](#) Conformance

New specifications MAY require that the type parameter be used to identify the Atom Document type. Producers of Atom Entry Documents SHOULD use the type parameter regardless of whether or not it is required. Producers of Atom Feed Documents MAY use the parameter.

Atom processors that do not recognize the 'type' parameter MUST ignore its value and examine the root element to determine the document type.

Atom processors that do recognize the parameter SHOULD detect and report inconsistencies between the parameter's value and the actual

type of the document's root element.

[5.](#) IANA Considerations

IANA is requested to add a reference to this specification in the 'application/atom+xml' media type registration.

[6.](#) Security Considerations

The security considerations discussed in [Section 8 of \[RFC4287\]](#) apply.

[7.](#) Normative References

[RFC2046] Freed, N. and N. Borenstein, "Multipurpose Internet Mail Extensions (MIME) Part Two: Media Types", [RFC 2046](#), November 1996.
