**Additional Managed Objects for Network Address Translators (NAT)
draft-ietf-behave-nat-mib-01**

Abstract

This memo defines a portion of the Management Information Base (MIB) for devices implementing Network Address Translator (NAT) function. This MIB module may be used for monitoring of a device capable of NAT function.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on December 20, 2012.

1. Introduction

[RFC4008] defines some objects for managing network address translators (NATs). Current operational practice often requires additional objects, in particular for enterprise and Internet service provider (ISP) deployments. This document defines those additional objects.

This module is designed to be completely independent from [RFC4008]. A NAT implementation could be managed using this module, the one from [RFC4008], or both.

2. Overview

New features in this module are as follows:

Counters: Many new counters are introduced. Most of them are available in two variants: global and per-transport protocol.

Limits: A few limits on the quantity of state data stored by the NAT device. Some of them can trigger notifications.

Address+Port Pools: Pools of external addresses and ports are often used in enterprise and ISP settings. Pools are listed in a table, each with its range of addresses and ports. It is possible to inspect each pool's usage, to set limits, and to receive notifications when thresholds are crossed.

Address Mappings: NATs that have an "IP address pooling" behavior of "Paired" [RFC4787] maintain a mapping from internal address to external address. This module allows inspection of this mapping table.

Mapping table indexed by external 3-tuple: It is often necessary to determine the internal address that is mapped to a given external address and port. This MIB provides this table with an index to accomplish this efficiently, without having to iterate over all mappings.

Per-subscriber counters, limits, and notifications: Carrier-Grade NATs operate with a notion of "subscriber", to which are associated a set of counters, limits, and notifications. The subscriber identifier may not necessarily be an internal address, as in the case of DS-Lite, where the identifier is the IPv6 address of the tunnel endpoint and the internal addresses are the same for each subscriber.

3. Definitions

This MIB module IMPORTs objects from [\[RFC2578\]](#), [\[RFC2579\]](#), and [\[RFC4001\]](#).

    DESCRIPTION
        "Address type of the subscriber identifier."
    ::= { newNatSubscribersTableEntry 1 }

```

```

newNatSubscriberIdentifier OBJECT-TYPE
    SYNTAX InetAddress (SIZE (4|16))
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        "Address used for uniquely identifying the subscriber."

```

In traditional NAT, this is the internal address assigned to the CPE. In case an address range is assigned to a subscriber, the first address in the range is used as identifier. For tunnelled connectivity (e.g., DS-Lite [[RFC6333](#)]), the outer address is used as identifier (i.e., the IPv6 address in the case of DS-Lite)."

```
::= { newNatSubscribersTableEntry 2 }
```

newNatSubscriberIntPrefixType OBJECT-TYPE

SYNTAX InetAddressType

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"Subscriber's internal prefix type."

```
::= { newNatSubscribersTableEntry 3 }
```

newNatSubscriberIntPrefix OBJECT-TYPE

SYNTAX InetAddress

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"Prefix assigned to a subscriber's CPE."

```
::= { newNatSubscribersTableEntry 4 }
```

newNatSubscriberIntPrefixLength OBJECT-TYPE

SYNTAX InetAddressPrefixLength

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"Length of the prefix assigned to a subscriber's CPE, in bits.

In case a single address is assigned, this will be 32 for IPv4 and 128 for IPv6."

```
::= { newNatSubscribersTableEntry 5 }
```

newNatSubscriberPool OBJECT-TYPE

SYNTAX NatPoolIndex

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"External address pool to which this subscriber belongs."

```
::= { newNatSubscribersTableEntry 6 }
```

newNatSubscriberCntTranslates OBJECT-TYPE

SYNTAX Counter64

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"The number of packets received from or sent to this subscriber

and to which NAT has been applied."
 ::= { newNatSubscribersTableEntry 7 }

newNatSubscriberCntOOP OBJECT-TYPE

SYNTAX Counter64

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"The number of packets received from this subscriber to which NAT could not be applied because no external port was available, excluding quota limitations."

::= { newNatSubscribersTableEntry 8 }

newNatSubscriberCntResource OBJECT-TYPE

SYNTAX Counter64

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"The number of packets received from this subscriber to which NAT could not be applied because of resource constraints (excluding out-of-ports condition)."

::= { newNatSubscribersTableEntry 9 }

newNatSubscriberCntStateMismatch OBJECT-TYPE

SYNTAX Counter64

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"The number of packets received from or destined to this subscriber to which NAT could not be applied because of mapping state mismatch. For example, a TCP packet that matches an existing mapping but is dropped because its flags are incompatible with the current state of the mapping would cause this counter to be incremented."

::= { newNatSubscribersTableEntry 10 }

newNatSubscriberCntQuota OBJECT-TYPE

SYNTAX Counter64

MAX-ACCESS read-only

STATUS current

DESCRIPTION

"The number of packets received from or destined to this subscriber to which NAT could not be applied because of quota limitations. Quotas include absolute limits as well as limits on the rate of allocation."

::= { newNatSubscribersTableEntry 11 }

newNatSubscriberCntMappings OBJECT-TYPE

```
SYNTAX Gauge32
MAX-ACCESS read-only
STATUS current
DESCRIPTION
    "Number of currently active mappings created by or for this
    subscriber.

    Equal to newNatSubscriberCntMapRemovals -
    newNatSubscriberCntMapCreations."
 ::= { newNatSubscribersTableEntry 12 }
```

```
newNatSubscriberCntMapCreations OBJECT-TYPE
SYNTAX Counter64
MAX-ACCESS read-only
STATUS current
DESCRIPTION
    "Number of mappings created by or for this subscriber."
 ::= { newNatSubscribersTableEntry 13 }
```

```
newNatSubscriberCntMapRemovals OBJECT-TYPE
SYNTAX Counter64
MAX-ACCESS read-only
STATUS current
DESCRIPTION
    "Number of mappings removed by or for this subscriber."
 ::= { newNatSubscribersTableEntry 14 }
```

```
newNatSubscriberLimitMappings OBJECT-TYPE
SYNTAX Unsigned32
MAX-ACCESS read-write
STATUS current
DESCRIPTION
    "Limit on the number of active mappings created by or for this
    subscriber. Zero means unlimited."

Appendix A. Change Log (to be removed by RFC Editor prior to publication)

A.1. Changed in -01

- o Added CGN stuff (per-subscriber quotas, counters, notifications).
- o Added conformance groups and compliance statements.
- o Added mapping table indexed by external 3-tuple.
