A YANG Data Model for Flexi-Grid Optical Networks
[draft-ietf-ccamp-flexigrid-yang-07](#)

Abstract

This document defines a YANG module for managing flexi-grid optical networks. The model defined in this document specifies a flexi-grid traffic engineering database that is used to describe the topology of a flexi-grid network. It is based on and augments existing YANG models that describe network and traffic engineering topologies.

A partner document defines a second YANG module for flexi-grid media channels, i.e., the paths from source to destination through a number of intermediate nodes.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on March 26, 2021.

[1. Introduction](#)

The flexible grid (flexi-grid) optical network technology defined by the International Telecommunication Union Telecommunication Standardization Sector (ITU-T) and documented in Recommendation G.694.1 [[G.694.1](#)] and G.872 [[G.872](#)] provides an enhanced Dense Wavelength Division Multiplexing (DWDM) grid by defining a set of nominal central frequencies, channel spacings, and the concept of the "frequency slot". In such an environment, a data-plane connection is switched based on allocated, variable-sized frequency ranges within the optical spectrum, creating what is known as a flexible grid (flexi-grid). This technology increases both transport network

scalability and flexibility, allowing the optimization of bandwidth usage.

[RFC7698] provides a framework GMPLS-Based control of flexi-grid DWDM networks while [RFC7699] defines generalized labels for the use in flexi-grid in GMPLS networks.

This document presents a YANG [RFC7950] model for flexi-grid objects in the dynamic optical network, including the nodes, transponders and links between them, as well as how such links interconnect nodes and transponders.

The YANG model for flexi-grid networks allows the representation of the flexi-grid optical layer of a network, combined with the underlying physical layer.

This document identifies the flexi-grid components, parameters and their values, characterizes the features and the performances of the flexi-grid elements. An application example is provided towards the end of the document to better understand their utility.

A partner document defines a second YANG module that described flexi-grid tunnels, i.e., the paths from source to destination through a number of intermediate nodes

[I-D.ietf-ccamp-flexigrid-media-channel-yang].

2. Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] [RFC8174] when, and only when, they appear in all capitals, as shown here.

3. Terminology

Refer to [RFC7446] and [RFC7581] for the key terms used in this document.

The following terms are defined in [RFC7950] and are not redefined here:

- o client
- o server
- o augment

- o data model

- o data node

The following terms are defined in [[RFC6241](#)] and are not redefined here:

- o configuration data

- o state data

The terminology for describing YANG data models is found in [[RFC7950](#)].

[4.](#) Tree Diagram

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in these diagrams is defined in [[RFC8340](#)].

[4.1.](#) Prefixes in Data Node Names

In this document, names of data nodes and other data model objects are prefixed using the standard prefix associated with the corresponding YANG imported modules, as shown in Figure 1. It uses prefixes from [[I-D.ietf-ccamp-layer0-types](#)], [[RFC8345](#)], and [[RFC8795](#)].

Prefix	YANG module	Reference
l0-types	ietf-layer0-types	[RFCXXXX]
flexi-grid	ietf-flexi-grid-topology	[RFCYYYY]
nw	ietf-network	[RFC8345]
nt	ietf-network-topology	[RFC8345]
tet	ietf-te-topology	[RFC8795]

Figure 1: Prefixes and Corresponding YANG modules

RFC Editor Note: Please replace XXXX with the RFC numbers assigned to [draft-ietf-ccamp-layer0-types](#). Please replace YYYY with the RFC number assigned to this document. Please remove this note.

5. Main Components of the Flexi-grid Topology

This section describes the YANG module. It is specified in [Section 8](#).

The description of the three main components, flexi-grid-node, flexi-grid-transponder and flexi-grid-link is provided below. flexi-grid-sliceable-transponders are also defined.

The syntax specification below uses the augmented Backus-Naur Form (BNF) as described in [[RFC5234](#)].

```
<flexi-grid-node> ::= <config> <state>
```

<flexi-grid-node>: This element designates a node in the network.

```
<config> ::= <flexi-grid-node-attributes-config>
```

<config>: Contains the configuration of a node.

```
<flexi-grid-node-attributes-config> ::= <list-interface>
                                         <connectivity_matrix>
```

<flexi-grid-node-attributes-config>: Contains all the attributes related to the node configuration, such as its interfaces or its management addresses.

```
<list-interface> ::= <name> <port-number>
                  <input-port> <output-port> <description>
                  <interface-type>
                  [<numbered-interface> / <unnumbered-interface>]
```

<list-interface>: The list containing all the information of the interfaces.

<name>: Determines the interface name.

<port-number>: Port number of the interface.

<input-port>: Boolean value that defines whether the interface is input or not.

<output-port>: Boolean value that defines whether the interface is output or not.

<description>: Description of the usage of the interface.

<interface-type>: Determines if the interface is numbered or unnumbered.

<numbered-interface> ::= <n-i-ip-address>

<numbered-interface>: An interface with its own IP address.

<n-i-ip-address>: Only available if <interface-type> is "numbered-interface". Determines the IP address of the interface.

<unnumbered-interface> ::= <u-i-ip-address> <label>

<unnumbered-interface>: An interface that needs a label to be unique.

<u-i-ip-address>: Only available if <interface-type> is "numbered-interface". Determines the node IP address, which with the label defines the interface.

<label>: Label that determines the interface, joint with the node IP address.

<connectivity-matrix> ::= <connections>

<connectivity-matrix>: Determines whether a connection port in/port out exists.

<connections> ::= <input-port-id> <output-port-id>

<flexi-grid-transponder> ::= <transponder-type> <config> <state>

<flexi-grid-transponder>: This item designates a transponder of a node.

<config> ::= <flexi-grid-transponder-attributes-config>

<config>: Contains the configuration of a transponder.

<flexi-grid-transponder-attributes-config> ::=
<available-operational-mode> <operational-mode>

<flexi-grid-transponder-attributes>: Contains all the attributes related to the transponder.

<available-operational-mode>: It provides a list of the operational modes available at this transponder.

<operational-mode>: Determines the type of operational mode in use.

<state> ::= <flexi-grid-transponder-attributes-config>
 <flexi-grid-transponder-attributes-state>

<state>: Contains the state of a transponder.

<flexi-grid-transponder-attributes-config>: See above.

<flexi-grid-transponder-attributes-state>: Contains the state of a transponder.

<flexi-grid-link> ::= <config> <state>

<flexi-grid-link>: This element describes all the information of a link.

<config> ::= <flexi-grid-link-attributes-config>

<config>: Contains the configuration of a link.

<flexi-grid-link-attributes-config> ::= <technology-type>
 <available-label-flexi-grid> <N-max> <base-frequency>
 <nominally-central-frequency-granularity>
 <slot-width-granularity>

<flexi-grid-link-attributes>: Contains all the attributes related to the link, such as its unique id, its N value, its latency, etc.

<link-id>: Unique id of the link.

<available-label-flexi-grid>: Array of bits that determines, with each bit, the availability of each interface for flexi-grid technology.

<N-max>: The max value of N in this link, being N the number of slots.

<base-frequency>: The default central frequency used in the link.

<nominally-central-frequency-granularity>: It is the spacing between allowed nominal central frequencies and it is set to 6.25 GHz (note: sometimes referred to as 0.00625 THz).

<slot-width-granularity>: 12.5 GHz, as defined in G.694.1.

```
<state> ::= <flexi-grid-link-attributes-config>
           <flexi-grid-link-attributes-state>

<state>: Contains the state of a link.

<flexi-grid-link-attributes-config>: See above.

<flexi-grid-link-attributes-state>: Contains all the
                                   information related to the state of a link.

<flexi-grid-transponder> ::= <transponder-type> <config> <state>

<flexi-grid-transponder>: This item designates a transponder
                           of a node.

<config> ::= <flexi-grid-transponder-attributes-config>

<config>: Contains the configuration of a transponder.

<flexi-grid-transponder-attributes-config> ::=
               <available-operational-mode> <operational-mode>

<flexi-grid-transponder-attributes>: Contains all the
                                   attributes related to the transponder.

<available-operational-mode>: It provides a list of the
                               operational modes available at this transponder.

<operational-mode>: Determines the type of operational
                     mode in use.

<state> ::= <flexi-grid-transponder-attributes-config>
           <flexi-grid-transponder-attributes-state>

<state>: Contains the state of a transponder.

<flexi-grid-transponder-attributes-config>: See above.

<flexi-grid-transponder-attributes-state>: Contains the
                                         state of a transponder.

<flexi-grid-link> ::= <config> <state>

<flexi-grid-link>: This element describes all the information
                   of a link.

<config> ::= <flexi-grid-link-attributes-config>
```

<config>: Contains the configuration of a link.

<flexi-grid-link-attributes-config> ::= <technology-type>
 <available-label-flexi-grid> <N-max> <base-frequency>
 <nominally-central-frequency-granularity>
 <slot-width-granularity>

<flexi-grid-link-attributes>: Contains all the attributes related to the link, such as its unique id, its N value, its latency, etc.

<link-id>: Unique id of the link.

<available-label-flexi-grid>: Array of bits that determines, with each bit, the availability of each interface for flexi-grid technology.

<N-max>: The max value of N in this link, being N the number of slots.

<base-frequency>: The default central frequency used in the link.

<nominally-central-frequency-granularity>: It is the spacing between allowed nominal central frequencies and it is set to 6.25 GHz (note: sometimes referred to as 0.00625 THz).

<slot-width-granularity>: 12.5 GHz, as defined in G.694.1.

<state> ::= <flexi-grid-link-attributes-config>
 <flexi-grid-link-attributes-state>

<state>: Contains the state of a link.

<flexi-grid-link-attributes-config>: See above.

<flexi-grid-link-attributes-state>: Contains all the information related to the state of a link.

<flexi-grid-transponder> ::= <transponder-type> <config> <state>

<flexi-grid-transponder>: This item designates a transponder of a node.

<config> ::= <flexi-grid-transponder-attributes-config>

<config>: Contains the configuration of a transponder.

```
<flexi-grid-transponder-attributes-config> ::=  
    <available-operational-mode> <operational-mode>  
  
    <flexi-grid-transponder-attributes>: Contains all the  
        attributes related to the transponder.  
  
    <available-operational-mode>: It provides a list of the  
        operational modes available at this transponder.  
  
    <operational-mode>: Determines the type of operational mode  
        in use.  
  
<state> ::= <flexi-grid-transponder-attributes-config>  
    <flexi-grid-transponder-attributes-state>  
  
    <state>: Contains the state of a transponder.  
  
    <flexi-grid-transponder-attributes-config>: See above.  
  
    <flexi-grid-transponder-attributes-state>: Contains the  
        state of a transponder.  
  
<flexi-grid-link> ::= <config> <state>  
  
    <flexi-grid-link>: This element describes all the information  
        of a link.  
  
<config> ::= <flexi-grid-link-attributes-config>  
  
    <config>: Contains the configuration of a link.  
  
<flexi-grid-link-attributes-config> ::= <technology-type>  
    <available-label-flexi-grid> <N-max> <base-frequency>  
    <nominal-central-frequency-granularity>  
    <slot-width-granularity>  
  
    <flexi-grid-link-attributes>: Contains all the attributes  
        related to the link, such as its unique id, its N value,  
        its latency, etc.  
  
    <link-id>: Unique id of the link.  
  
    <available-label-flexi-grid>: Array of bits that determines,  
        with each bit, the availability of each interface for  
        flexi-grid technology.  
  
    <N-max>: The max value of N in this link, being N the number  
        of slots.
```

<base-frequency>: The default central frequency used in the link.

<nominal-central-frequency-granularity>: It is the spacing between allowed nominal central frequencies and it is set to 6.25 GHz (note: sometimes referred to as 0.00625 THz).

<slot-width-granularity>: 12.5 GHz, as defined in G.694.1.

<state> ::= <flexi-grid-link-attributes-config>
 <flexi-grid-link-attributes-state>

<state>: Contains the state of a link.

<flexi-grid-link-attributes-config>: See above.

<flexi-grid-link-attributes-state>: Contains all the information related to the state of a link.

6. Example of Use

In order to explain how this model is used, we provide the following example. An optical network usually has multiple transponders, switches (nodes) and links between them. Figure 1 shows a simple topology, where two physical paths interconnect two optical transponders.

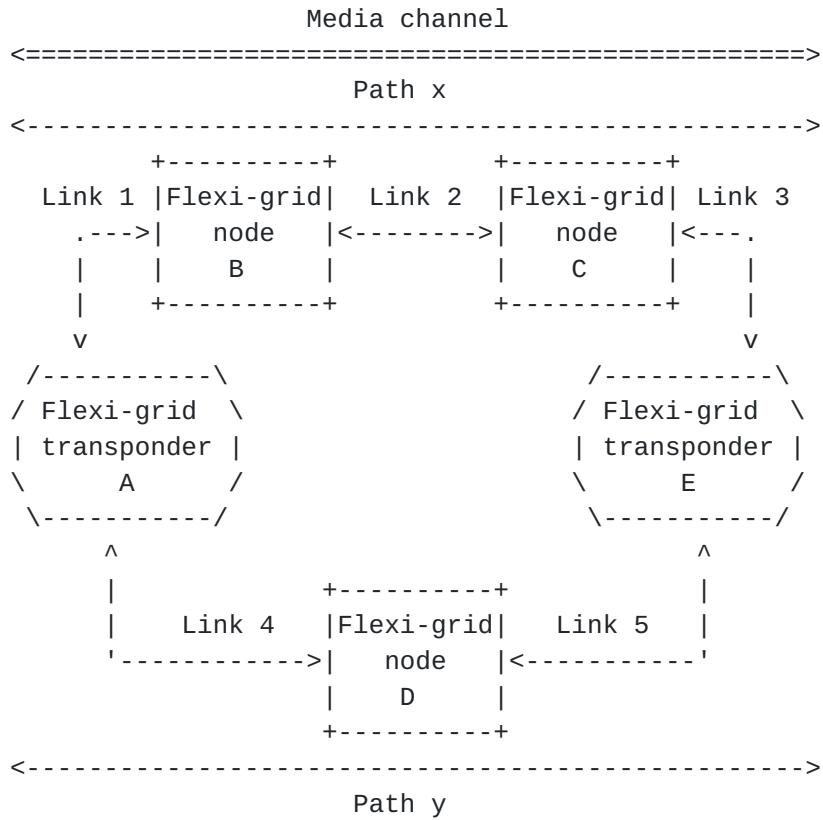

Figure 3: Topology Example

In order to configure a media channel to interconnect transponders A and E, first of all we have to populate the flexi-grid topology YANG model with all elements in the network:

- o We define the transponders A and E, including their FEC type, if enabled, and modulation type. We also provide node identifiers and addresses for the transponders, as well as interfaces included in the transponders. Sliceable transponders can also be defined if needed.
- o We do the same for the nodes B, C and D, providing their identifiers, addresses and interfaces, as well as the internal connectivity matrix between interfaces.
- o Then, we also define the links 1 to 5 that interconnect nodes and transponders, indicating which flexi-grid labels are available.
- o Other information, such as the slot frequency and granularity are also provided.

- o Next, we can configure the media channel from the information we have stored in the flexi-grid TED, by querying which elements are available, and planning the resources that have to be provided on each situation. Note that every element in the flexi-grid TED has a reference, and this is the way in which they are called in the media channel. We refer to [[I-D.ietf-ccamp-flexigrid-media-channel-yang](#)] to complete this example.

9. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF access control model [[RFC8341](#)] provides the means to restrict access for particular NETCONF users to a preconfigured subset of all available NETCONF protocol operations and content. The NETCONF Protocol over Secure Shell (SSH) [[RFC6242](#)] describes a method for invoking and running NETCONF within a Secure Shell (SSH) session as an SSH subsystem. The Network Configuration Access Control Model (NACM) [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

A number of configuration data nodes defined in this document are writable/deletable (i.e., "config true"). These data nodes may be considered sensitive or vulnerable in some network environments.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable

in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

```
/nw:networks/nw:network/nw:network-types/tet:te-topology  
  
/nw:networks/nw:network/nt:link/tet:te/tet:te-link-attributes  
  
/nw:networks/nw:network/nw:node/nt:termination-point/tet:te  
  
/nw:networks/nw:network/nw:node/tet:te/tet:te-node-attributes  
/te-connectivity-matrices/te-connectivity-matrix/tet:path-  
constraints/tet:te-bandwidth/tet:technology  
  
/nw:networks/nw:network/nw:node/tet:te  
/tet:tunnel-termination-point/tet:local-link-connectivities  
/tet:label-restrictions/tet:label-restriction
```

10. IANA Considerations

IANA is requested to assigned a new URI from the "IETF XML Registry" [[RFC3688](#)] as follows:

URI: urn:ietf:params:xml:ns:yang:ietf-fexi-grid-topology
Registrant Contact: The IESG
XML: N/A; the requested URI is an XML namespace.

IANA is requested to assign a new YANG module name in the "YANG Module Names" registry [[RFC6020](#)] as follows:

Name: ietf-fexi-grid-topology
Namespace: urn:ietf:params:xml:ns:yang:ietf-fexi-grid-topology
Prefix: fexi-grid-topology
Reference: [This.I-D]
