**A YANG Data Model for WSON (Wavelength Switched Optical Networks)**  
**[draft-ietf-ccamp-wson-yang-28](#)**

## Abstract

This document provides a YANG data model for the routing and wavelength assignment (RWA) TE topology in wavelength switched optical networks (WSNs). The YANG data model defined in this document conforms to the Network Management Datastore Architecture (NMDA).

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on July 2, 2021.

## [1. Introduction](#)

This document provides a YANG data model for the routing and wavelength assignment (RWA) Traffic Engineering (TE) topology in transparent wavelength switched optical networks (WSONs). The YANG model described in this document is a WSON technology-specific YANG model based on the information model developed in [[RFC7446](#)] and the two encoding documents [[RFC7581](#)] and [[RFC7579](#)] that developed protocol independent encodings based on [[RFC7446](#)].

[ITU-Tg6982] defines amplified multichannel dense wavelength division multiplexing applications with single channel optical interfaces. The YANG data model defined in this document refers to the standard application mode defined in [[ITU-Tg6982](#)].

What is not in scope of this document is both impairment-aware optical networks and flexi-grid. Refer to [[I-D.ietf-ccamp-optical-impairment-topology-yang](#)] for impairment-aware optical network topology model and [[I-D.ietf-ccamp-flexigrid-yang](#)] for flexi-grid optical network topology model.

Additionally, transponders and resource blocks (e.g., 3R Regeneration) models are not in the scope of this document.

Zheng, et al.

Expires July 2, 2021

[Page 2]

This document defines one YANG model: `ietf-wson-topology` ([Section 3](#)). This document augments the generic TE topology draft [[RFC8795](#)].

There are multiple applications for the yang data model defined in this document. For example, nodes within the network can use the data model to capture their understanding of the overall WSOn topology and expose it to a controller. A controller can further propagate the topology to other controllers. The YANG model is used by NETCONF [[RFC6020](#)], [[RFC8341](#)] or a RESTCONF [[RFC8040](#)] protocol. The YANG data model defined in this document conforms to the Network Management Datastore Architecture [[RFC8342](#)].

### **[1.1.](#) Terminology and Notations**

Refer to [[RFC7446](#)] and [[RFC7581](#)] for the key terms used in this document. The following terms are defined in [[RFC7950](#)] and are not redefined here:

- o client
- o server
- o augment
- o data model
- o data node

The following terms are defined in [[RFC6241](#)] and are not redefined here:

- o configuration data
- o state data

The terminology for describing YANG data models is found in [[RFC7950](#)].

### **[1.2.](#) Tree Diagram**

A simplified graphical representation of the data model is used in [Section 2](#) of this this document. The meaning of the symbols in these diagrams is defined in [[RFC8340](#)].

### 1.3. Prefix in Data Node Names

In this document, names of data nodes and other data model objects are prefixed using the standard prefix associated with the corresponding YANG imported modules, as shown in the following table.

| Prefix   | YANG module           | Reference                 |
|----------|-----------------------|---------------------------|
| 10-types | ietf-layer0-types     | [ietf-ccamp-layer0-types] |
| wson     | ietf-wson-topology    | [RFCXXXX]                 |
| nw       | ietf-network          | [RFC8345]                 |
| nt       | ietf-network-topology | [RFC8345]                 |
| tet      | ietf-te-topology      | [RFC8795]                 |

Note: The RFC Editor will replace XXXX with the number assigned to the RFC once this draft becomes an RFC.

description  
  "This module provides a YANG data model for the routing and  
  wavelength assignment (RWA) Traffic Engineering (TE)  
  topology in wavelength switched optical networks (WSONs).  
  The YANG model described in this document is a WSON  
  technology-specific YANG model augmenting the generic TE  
  topology module (ietf-te-topology) based on the information  
  model developed in RFC 7446 and the two encoding documents  
RFC 7579 and RFC 7581.

#### 4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF Protocol over Secure Shell (SSH) [[RFC6242](#)] describes a method for invoking and running NETCONF within a Secure Shell (SSH) session as an SSH subsystem. The NETCONF access control model [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the

default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. Considerations in [Section 8 of \[RFC8795\]](#) are also applicable to their subtrees in the module defined in this document.

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. Considerations in [Section 8 of \[RFC8795\]](#) are also applicable to their subtrees in the module defined in this document.

## **5. IANA Considerations**

It is proposed to IANA to assign new URIs from the "IETF XML Registry" [[RFC3688](#)] as follows:

```
URI: urn:ietf:params:xml:ns:yang:ietf-wson-topology
Registrant Contact: The IESG
XML: N/A; the requested URI is an XML namespace.
```

This document registers a YANG module in the YANG Module Names registry [[RFC7950](#)] and [[RFC6020](#)].

```
name: ietf-wson-topology
namespace: urn:ietf:params:xml:ns:yang:ietf-wson-topology
prefix: wson
reference: RFC XXXX
```
