Constrained YANG Module Library
draft-ietf-core-yang-library-00

Abstract

This document describes a constrained version of the YANG library that provides information about the YANG modules, datastores, and datastore schemas used by a constrained network management server (e.g., a CORECONF server).

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 25, 2020.

[1. Introduction](#)

There is a need for a standard mechanism to expose which YANG modules, datastores and datastore schemas are in use by a constrained network management server. This document defines the YANG module 'ietf-constrained-yang-library' that provides this information.

YANG module 'ietf-constrained-yang-library' shares the same data model and objectives as 'ietf-yang-library', only datatypes and mandatory requirements have been updated to minimize its size to allow its implementation by Constrained Nodes and/or Constrained Networks as defined by [[RFC7228](#)]. To review the list of objectives and proposed data model, please refer to [[RFC8525](#)] section 2 and 3.

[2. Terminology and Notation](#)

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [BCP 14](#) [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

The following terms are defined in [[RFC7950](#)]: client, deviation, feature, module, submodule and server.

The following term is defined in [[I-D.ietf-core-sid](#)]: YANG Schema Item iDentifier (SID).

The following terms are defined in [[RFC8525](#)]: YANG library and YANG library checksum.

Veillette & Petrov

Expires January 25, 2020

[Page 2]

3. Overview

The conceptual model of the YANG library is depicted in Figure 1.

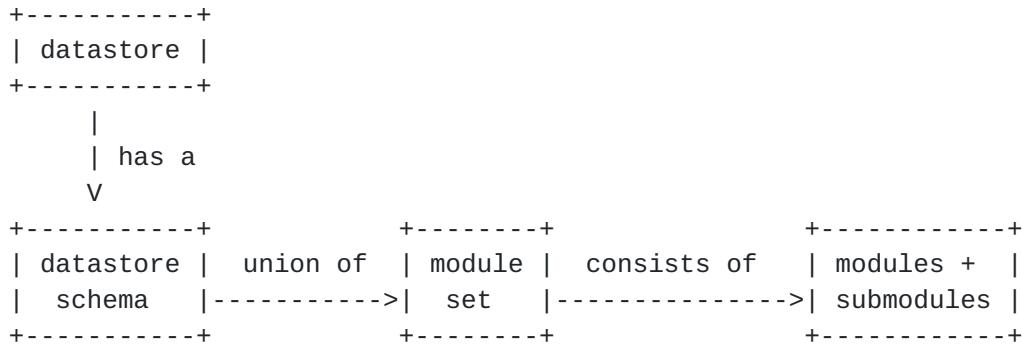

Figure 1: Conceptual model of the YANG library

It's expected that most constrained network management servers have one datastore (e.g. a unified datastore). However, some servers may have multiples datastore as described by NMDA [[RFC8342](#)]. The YANG library data model supports both cases.

In this model, every datastore has an associated datastore schema, which is the union of module sets, which is a collection of modules. Multiple datastores may refer to the same datastore schema and individual datastore schemas may share module sets.

For each module, the YANG library provides:

- o the YANG module identifier (i.e. SID)
- o its revision
- o its list of submodules
- o its list of imported modules
- o its set of features and deviations

YANG module namespace and location are also supported, but their implementation is not recommended for constrained servers.

3.1. Tree diagram

The tree diagram of YANG module `ietf-constrained-yang-library` is provided below. This graphical representation of a YANG module is defined in [[RFC8340](#)].

[3.2.](#) Major differences between `ietf-constrained-yang-library` and `ietf-yang-library`

The changes between the reference data model '`ietf-yang-library`' and its constrained version '`ietf-constrained-yang-library`' are listed below:

- o module-set 'name' and schema 'name' are implemented using an 8 bits unsigned integer and renamed 'index'.

Veillette & Petrov

Expires January 25, 2020

[Page 4]

- o module 'name', submodule 'name' and datastore 'name' are implemented using a SID (i.e. an unsigned integer) and renamed 'identifier'.
- o 'feature' and 'deviation' are implemented using a SID (i.e. an unsigned integer).
- o 'revision' fields are implemented using a 4 bytes binary string.
- o the mandatory requirement of the 'namespace' fields is removed, and implementation is not recommended. SIDs used by constrained devices and protocols don't require namespaces.
- o the implementation of the 'location' fields are not recommended, the use of the module SID as the handle to retrieve the associated YANG module is proposed instead.

4. YANG Module "ietf-constrained-yang-library"

RFC Ed.: update the date below with the date of RFC publication and remove this note.

```
<CODE BEGINS> file "ietf-constrained-yang-library@2019-03-28.yang"

<CODE ENDS>
```

5. IANA Considerations

5.1. YANG Module Registry

This document registers one YANG module in the YANG Module Names registry [[RFC7950](#)].

```
name: ietf-constrained-yang-library

namespace: urn:ietf:params:xml:ns:yang:ietf-constrained-yang-library

prefix: lib

reference: RFC XXXX

// RFC Ed.: replace XXXX with RFC number and remove this note
```

6. Security Considerations

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access to these data nodes.

Specifically, the 'module' list may help an attacker to identify the server capabilities and server implementations with known bugs. Server vulnerabilities may be specific to particular modules, module revisions, module features, or even module deviations. This information is included in each module entry. For example, if a particular operation on a particular data node is known to cause a server to crash or significantly degrade device performance, then the module list information will help an attacker to identify server

Veillette & Petrov

Expires January 25, 2020

[Page 13]

implementations with such a defect, in order to launch a denial of service attack on these devices.

[7. Acknowledgments](#)

The YANG module defined by this memo have been derived from an already existing YANG module, `ietf-yang-library` [[RFC8525](#)], we will like to thanks to the authors of this YANG module. A special thank also to Andy Bierman for his initial recommendations for the creation of this YANG module.
