

Simple Network Time Protocol Configuration Option for DHCPv6  
draft-ietf-dhc-dhcpv6-opt-sntp-01

Status of this Memo

This document is an Internet-Draft and is subject to all provisions of [section 3 of RFC 3667](#). By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she become aware will be disclosed, in accordance with [RFC 3668](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on April 2005.

Abstract

This document describes a new DHCPv6 option for passing a list of Simple Network Time Protocol (SNTP) server addresses to a client.

## [1.](#) Introduction

This document describes a new option called SNTP [\[3\]](#) servers Option for passing information about SNTP servers in DHCPv6 [\[1\]](#).

## [2.](#) Requirements

The keywords MUST, MUST NOT, REQUIRED, SHALL, SHALL NOT, SHOULD, SHOULD NOT, RECOMMENDED, MAY, and OPTIONAL, when they appear in this document, are to be interpreted as described in [RFC 2119](#) [\[2\]](#).

SNTP Configuration Option for DHCPv6

Oct 2004

## [3.](#) Terminology

This document uses terminology specific to IPv6 and DHCPv6 as defined in "Terminology" section of the DHCPv6 specification [\[1\]](#).

## [4.](#) Simple Network Time Protocol (SNTP) Servers option

The Simple Network Time Protocol Servers option provides a list of one or more IPv6 addresses of SNTP [\[3\]](#) servers available to the client for synchronization. The clients use these SNTP servers to synchronize their system time to that of the standard time servers. Clients MUST treat the list of SNTP servers as an ordered list. The server MAY list the SNTP servers in the order of preference.

The option defined in this document can only be used to configure information about SNTP servers that can be reached using IPv6. The DHCP option to configure information about IPv4 SNTP servers can be

messages specified above, the receiver SHOULD ignore the option.

The option number for this option MAY appear in the Option Request Option [1] in the following messages: Solicit, Request, Renew, Rebind, Information-Request and Reconfigure. If this option number appear in the Option Request Option in other than the messages specified above, the receiver SHOULD ignore the option number.

## 6. Security Considerations

The SNTP servers option may be used by an intruder DHCPv6 server to cause DHCPv6 clients to contact a rogue SNTP server, resulting in invalid synchronization of time in client and finally leading to time critical applications running inaccurately in client machine. The time accuracy can be crucial to some security algorithms. For example, it may cause expired certificates to gain a new life, making the applications running on the client machine less secure. It can even cause clients to set their time incorrectly, making them vulnerable to replay attacks in protocols that use time stamps to detect replays.

To avoid attacks through these options, the DHCPv6 client SHOULD use authenticated DHCPv6 (see "Authentication of DHCP messages" section in the DHCPv6 specification [1]).

## 7. IANA Considerations

IANA is requested to assign an option code to the following options from the option-code space defined in "DHCPv6 Options" section of the DHCPv6 specification [1].

Option Name	Value	Described in
OPTION_SNTP_SERVERS	tbd	<a href="#">Section 4</a> .
