## **Bundle Protocol Version 7 Administrative Record Types Registry**

### **Abstract**

This document clarifies that a Bundle Protocol Version 7 agent is intended to use an IANA sub-registry for Administrative Record types. It also makes a code point reservation for private or experimental use.

### **Status of This Memo**

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 11 May 2023.

### 1. Introduction

The earlier Bundle Protocol (BP) Version 6 (BPv6) defined an IANA sub-registry for Administrative Record type code points under [[IANA-BP](#)]. When Bundle Protocol Version 7 (BPv7) was published in [[RFC9171](#)] it included an explicit table of Administrative Record types but made no mention of an IANA registry nor a requirement for BPv7 agents to be extensible in how they handle Administrative Record types. The BPv7 specification also did not discriminate between code point reservations and unassigned ranges for Administrative Record types.

This document updates BPv7 to explicitly use the IANA Administrative Record type registry in [Section 2](#). This document makes a reservation of the zero value for consistency with BPv6. This document also makes a reservation of high-valued code points for private or experimental use to avoid collisions with assigned code points.

#### 1.1. Scope

This document describes updates to the IANA Administrative Record type sub-registry and how a BPv7 agent is supposed to use that registry for identifying Administrative Record types.

This document does not specify how BPv6 and BPv7 can interoperate for overlapping code points or how a specific code point is to be interpreted either similarly or differently between Bundle Protocol versions. It is up to each individual Administrative Record type specification to define how it relates to each BP version.

#### 1.2. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in

BCP 14 [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

## 2. Administrative Record Types Registry

This document updates the requirements in [Section 6.1](#) of [[RFC9171](#)] to use an existing IANA registry and updates that sub-registry in [Section 4.1](#).

The code point allocated in Annex D of [[CCSDS-BP](#)] was never added to the IANA registry. To avoid a collision, this document adds that allocation to the registry.

Instead of using the explicit list of types in Table 3 of [[RFC9171](#)], a BPv7 Agent **SHALL** interpret Administrative Record type code values in accordance with the IANA "Bundle Administrative Record Types" sub-registry under [[IANA-BP](#)] for entries having a "Bundle Protocol Version" of 7.

## 3. Security Considerations

This document does not define any requirements or structures which introduce new security considerations.

The existing security considerations of [[RFC9171](#)] still apply when using the IANA Administrative Record Types sub-registry.

## 4. IANA Considerations

This specification modifies a BPv6 sub-registry to extend BPv7.

### 4.1. Bundle Administrative Record Types

Within the "Bundle Protocol" registry [[IANA-BP](#)], the "Bundle Administrative Record Types" sub-registry has been updated to include a leftmost "Bundle Protocol Version" column. New entries have been added and existing entries have been updated to have BP versions as in the following table.

Bundle Protocol Version	Value	Description	Reference
6,7	0	Reserved	[ <a href="#">RFC7116</a> ] [This specification]
6,7	1	Bundle status report	[ <a href="#">RFC5050</a> ] [ <a href="#">RFC9171</a> ]
6	2	Custody signal	[ <a href="#">RFC5050</a> ]
6,7	3	Unassigned	
6	4		[ <a href="#">CCSDS-BP</a> ]

Bundle Protocol Version	Value	Description	Reference
		Aggregate Custody Signal	
6,7	5-15	Unassigned	
7	16-65535	Unassigned	
7	greater than 65535	Reserved for Private or Experimental Use	[This specification]

Table 1: Bundle Administrative Record Types
