I2NSF Network Security Function-Facing Interface YANG Data Model  
draft-ietf-i2nsf-nsf-facing-interface-dm-00

## Abstract

This document defines a YANG data model corresponding to the information model for Network Security Functions (NSF) facing interface in Interface to Network Security Functions (I2NSF). It describes a data model for the features provided by generic security functions. This data model provides generic components whose vendors is well understood, so that the generic component can be used even if it has some vendor specific functions. These generic functions represent a point of interoperability, and can be provided by any product that offers the required Capabilities. Also, if vendors need additional features for its network security function, they can add the features by extending the YANG data model.

## Status of This Memo

This Internet-Draft is submitted to IETF in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

## 1. Introduction

This document defines a YANG [[RFC6020](#)] data model for the configuration of security services with the information model for Network Security Functions (NSF) facing interface in Interface to Network Security Functions (I2NSF). It provides a specific information model and the corresponding data models for generic network security functions (i.e., network security functions), as defined in [[i2nsf-nsf-cap-im](#)]. With these data model, I2NSF controller can control the capabilities of NSFs.

The "Event-Condition-Action" (ECA) policy model is used as the basis for the design of I2NSF Policy Rules.

The "ietf-i2nsf-nsf-facing-interface" YANG module defined in this document provides the following features:

- o configuration of I2NSF security policy rule for generic network security function policy
- o configuration of event clause for generic network security function policy
- o configuration of condition clause for generic network security function policy
- o configuration of action clause for generic network security function policy

## 2. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

## 3. Terminology

This document uses the terminology described in [\[i2nsf-nsf-cap-im\]](#)[\[i2rs-rib-data-model\]](#)[\[supa-policy-info-model\]](#). Especially, the following terms are from [\[supa-policy-info-model\]](#):

- o Data Model: A data model is a representation of concepts of interest to an environment in a form that is dependent on data repository, data definition language, query language, implementation language, and protocol.
- o Information Model: An information model is a representation of concepts of interest to an environment in a form that is

NSF-Facing Interface YANG Data Model

March 2018

independent of data repository, data definition language, query language, implementation language, and protocol.

### [3.1.](#) Tree Diagrams

A simplified graphical representation of the data model is used in this document. The meaning of the symbols in these diagrams [\[i2rs-rib-data-model\]](#) is as follows:

- o Brackets "[" and "]" enclose list keys.
- o Abbreviations before data node names: "rw" means configuration (read-write) and "ro" state data (read-only).
- o Symbols after data node names: "?" means an optional node and "\*" denotes a "list" and "leaf-list".
- o Parentheses enclose choice and case nodes, and case nodes are also marked with a colon (":").
- o Ellipsis ("...") stands for contents of subtrees that are not shown.

## [4.](#) The Structure and Objective of I2NSF Security Policy

### [4.1.](#) I2NSF Security Policy Rule

This shows a policy rule for generic network security functions. The object of a policy rule is defined as policy information and rule

information. This includes ECA Policy Rule such as Event Clause Objects, Condition Clause Objects, Action Clause Objects, Resolution Strategy, and Default Action.

#### [4.2.](#) Event Clause

This shows an event clause for generic network security functions. An Event is any important occurrence in time of a change in the system being managed, and/or in the environment of the system being managed. When used in the context of I2NSF Policy Rules, it is used to determine whether the Condition clause of the I2NSF Policy Rule can be evaluated or not. The object of an event clauses is defined as user security event, device security event, system security event, and time security event. The objects of event clauses can be extended according to specific vendor event features.

#### [4.3.](#) Condition Clause

This shows a condition clause for generic network security functions. A condition is defined as a set of attributes, features, and/or values that are to be compared with a set of known attributes, features, and/or values in order to determine whether or not the set of Actions in that (imperative) I2NSF Policy Rule can be executed or not. These objects are defined as packet security condition, packet payload security condition, target security condition, user security condition, context condition, and generic context condition. The objects of action clauses can be extended according to specific vendor condition features.

#### [4.4.](#) Action Clause

This shows an action clause for generic network security functions. An action is used to control and monitor aspects of flow-based NSFs when the event and condition clauses are satisfied. NSFs provide security functions by executing various Actions. The object of an action clause is defined as ingress action, egress action, and apply profile action. The objects of action clauses can be extended according to specific vendor action features.

## 5. Data Model Structure

This section shows a data model structure tree of generic network security functions that are defined in the [[i2nsf-nsf-cap-im](#)].

- o Consideration of ECA Policy Model by Aggregating the Event, Condition, and Action Clauses Objects.
- o Consideration of Capability Algebra.
- o Consideration of NSFs Capability Categories (i.e., Network Security, Content Security, and Attack Mitigation Capabilities).
- o Definitions for Network Security Event Class, Network Security Condition Class, and Network Security Action Class.

### 5.1. I2NSF Security Policy Rule

The data model for the identification of network security policy has the following structure:

```
module: ietf-i2nsf-policy-rule-for-nsf
+--rw i2nsf-security-policy* [policy-name]
|   +--rw policy-name          string
|   +--rw eca-policy-rules* [rule-id]
```

```
| |   +--rw rule-id          uint8
| |   +--rw rule-description? string
| |   +--rw rule-rev?        uint8
| |   +--rw rule-priority?   uint8
| |   +--rw policy-event-clause-agg-ptr*   instance-identifier
| |   +--rw policy-condition-clause-agg-ptr* instance-identifier
| |   +--rw policy-action-clause-agg-ptr*  instance-identifier
| |   +--rw time-zone
| |       +--rw absolute-time-zone
| |           |   +--rw time
| |           |       |   +--rw start-time?   yang:date-and-time
| |           |       |   +--rw end-time?     yang:date-and-time
| |           |       +--rw date
| |           |           |   +--rw absolute-date* yang:date-and-time
| |           +--rw periodic-time-zone
```

The data model for event rule has the following structure:

```
module: ietf-i2nsf-policy-rule-for-nsf
+--rw i2nsf-security-policy* [policy-name]
|   ...
|   +--rw eca-policy-rules* [rule-id]
|   ...
|   +--rw resolution-strategy
|   ...
|   +--rw default-action
|   ...
+--rw event-clause-container
|   +--rw event-clause-list* [eca-object-id]
|       +--rw entity-class?          identityref
|       +--rw eca-object-id          string
|       +--rw manual?                string
|       +--rw sec-event-content      string
|       +--rw sec-event-format       sec-event-format
|       +--rw sec-event-type         string
+--rw condition-clause-container
|   ...
+--rw action-clause-container
|   ...
```

Figure 2: Data Model Structure for Event Rule

These objects are defined as user security event, device security event, system security event, and time security event. These objects can be extended according to specific vendor event features. We will add additional event objects for more generic network security functions.

### [5.3.](#) Condition Clause

The data model for condition rule has the following structure:

```
module: ietf-i2nsf-policy-rule-for-nsf
+--rw i2nsf-security-policy* [policy-name]
|   ...
```

```
|   +--rw eca-policy-rules* [rule-id]
```

```

|     ...
|     +--rw resolution-strategy
|     ...
|     +--rw default-action
|     ...
+--rw event-clause-container
|     ...
+--rw condition-clause-container
|     +--rw condition-clause-list* [eca-object-id]
|         +--rw entity-class?                identityref
|         +--rw eca-object-id                string
|         +--rw packet-security-condition
|             +--rw packet-manual?            string
|             +--rw packet-security-mac-condition
|                 +--rw pkt-sec-cond-mac-dest*    yang:phys-address
|                 +--rw pkt-sec-cond-mac-src*    yang:phys-address
|                 +--rw pkt-sec-cond-mac-8021q*  string
|                 +--rw pkt-sec-cond-mac-ether-type* string
|                 +--rw pkt-sec-cond-mac-tci*    string
|             +--rw packet-security-ipv4-condition
|                 +--rw pkt-sec-cond-ipv4-header-length*    uint8
|                 +--rw pkt-sec-cond-ipv4-tos*              uint8
|                 +--rw pkt-sec-cond-ipv4-total-length*     uint16
|                 +--rw pkt-sec-cond-ipv4-id*               uint8
|                 +--rw pkt-sec-cond-ipv4-fragment*         uint8
|                 +--rw pkt-sec-cond-ipv4-fragment-offset*  uint16
|                 +--rw pkt-sec-cond-ipv4-ttl*              uint8
|                 +--rw pkt-sec-cond-ipv4-protocol*         uint8
|                 +--rw pkt-sec-cond-ipv4-src*              inet:ipv4-address
|                 +--rw pkt-sec-cond-ipv4-dest*             inet:ipv4-address
|                 +--rw pkt-sec-cond-ipv4-ipopts?           string
|                 +--rw pkt-sec-cond-ipv4-sameip?           boolean
|                 +--rw pkt-sec-cond-ipv4-geoip*            string
|             +--rw packet-security-ipv6-condition
|                 +--rw pkt-sec-cond-ipv6-dscp*             string
|                 +--rw pkt-sec-cond-ipv6-ecn*              string

```

Figure 4: Data Model Structure for Action Rule

These objects are defined as ingress action, egress action, and apply profile action. These objects can be extended according to specific vendor action feature. We will add additional action objects for more generic network security functions.

## [6.](#) YANG Module

### [6.1.](#) IETF NSF-Facing Interface YANG Data Module

This section introduces a YANG module for the information model of network security functions, as defined in the [[i2nsf-nsf-cap-im](#)].

[Appendix A](#). Changes from  
[draft-kim-i2nsf-nsf-facing-interface-data-model-04](#)

The following changes are made from  
[draft-kim-i2nsf-nsf-facing-interface-data-model-04](#):

1. We replaced "Objectives" section with "The Structure and Objective of I2NSF Security Policy" in order to convey clearer meaning.
2. We replaced the module name for this YANG data model in order to convey clearer meaning.
3. We modified it to support not only absolute time zone but also periodic time zone.
4. We added port number to the condition clause.
5. We modified the choice-case structure into a container structure to allow for the selection of multiple catalogues for condition and action clauses.
