Abstract

This document specifies additional type3 keyword values for the IPP/1.1 "media" Job Template attribute for use with the Internet Printing Protocol/1.1 (IPP). These additional attribute values permit the client to specify additional media options, including values of media common to engineering drawings. For completeness, all of the existing "media" keyword values are included as well.

INTERNET-DRAFT IPP/1.1: "media" attribute values extension October 8, 1999

The full set of IPP documents includes:

- Design Goals for an Internet Printing Protocol [[RFC2567](#)]
- Rationale for the Structure and Model and Protocol for the Internet Printing Protocol [[RFC2568](#)]
- Internet Printing Protocol/1.1: Model and Semantics [[ipp-mod](#)]
- Internet Printing Protocol/1.1: Encoding and Transport [[ipp-pro](#)]
- Internet Printing Protocol/1.1: Implementer's Guide [[ipp-iig](#)]
- Mapping between LPD and IPP Protocols [[RFC2569](#)]

The "Design Goals for an Internet Printing Protocol" document takes a broad look at distributed printing functionality, and it enumerates real-life scenarios that help to clarify the features that need to be included in a printing protocol for the Internet. It identifies requirements for three types of users: end users, operators, and administrators. It calls out a subset of end user requirements that are satisfied in IPP/1.0. A few OPTIONAL operator operations have been added to IPP/1.1.

The "Rationale for the Structure and Model and Protocol for the Internet Printing Protocol" document describes IPP from a high level view, defines a roadmap for the various documents that form the suite of IPP specification documents, and gives background and rationale for the IETF working group's major decisions.

The "Internet Printing Protocol/1.1: Encoding and Transport" document is a formal mapping of the abstract operations and attributes defined in

the model document onto HTTP/1.1 [[RFC2616](#)]. It defines the encoding rules for a new Internet MIME media type called "application/ipp". This document also defines the rules for transporting over HTTP a message body whose Content-Type is "application/ipp". This document defines a new scheme named 'ipp' for identifying IPP printers and jobs.

The "Internet Printing Protocol/1.1: Implementer's Guide" document gives insight and advice to implementers of IPP clients and IPP objects. It is intended to help them understand IPP/1.1 and some of the considerations that may assist them in the design of their client and/or IPP object implementations. For example, a typical order of processing requests is given, including error checking. Motivation for some of the specification decisions is also included.

The "Mapping between LPD and IPP Protocols" document gives some advice to implementers of gateways between IPP and LPD (Line Printer Daemon) implementations.

1 Additional values for the "media" Job Template attribute

1.1 Problem

Need additional type3 keyword values for media to support the additional sizes and types of media common to engineering drawings.

1.2 Suggested solution

This solution is a new solution to address the unique requirements for the engineering market. The suggestion is to add additional type3 keyword values to the "media" Job Template attributes (also applies to "media-default", "media-supported" and "media-ready" attributes).

1.3 Proposed Text

Add the following paragraphs indicated with revision marks to the description of the "media" Job Template attribute ([section 4.2.11](#)), References ([section 9](#)), and [Appendix C](#): "media" keyword values ([section 14](#)), so that the entire sections would be:

4.2.11 media (type3 keyword | name(MAX))

This attribute identifies the medium that the Printer uses for all impressions of the Job.

The values for "media" include medium-names, medium-sizes, input-trays and electronic forms so that one attribute specifies the media. If a Printer object supports a medium name as a value of this attribute, such a medium name implicitly selects an input-tray that contains the specified medium. If a Printer object supports a medium size as a value of this attribute, such a medium size implicitly selects a medium name that in turn implicitly selects an input-tray that contains the medium with the specified size. If a Printer object supports an input-tray as the value of this attribute, such an input-tray implicitly selects the medium that is in that input-tray at the time the job prints. This case includes manual-feed input-trays. If a Printer object supports an electronic form as the value of this attribute, such an electronic form implicitly selects a medium-name that in turn implicitly selects an

input-tray that contains the medium specified by the electronic form. The electronic form also implicitly selects an image that the Printer MUST merge with the document data as its prints each page.

Standard keyword values are taken from ISO DPA, the Printer MIB and ASME-Y14.1M and are listed in [section 14](#). An administrator MAY define

Expires April 8, 2000

INTERNET-DRAFTIPP/1.1: "media" attribute values extensionOctober 8, 1999

additional values using the 'name' or 'keyword' attribute syntax, depending on implementation.

There is also an additional Printer attribute named "media-ready" which differs from "media-supported" in that legal values only include the subset of "media-supported" values that are physically loaded and ready for printing with no operator intervention required. If an IPP object supports "media-supported", it NEED NOT support "media-ready".

The relationship of this attribute and the other attributes that control document processing is described in [section 15.3](#).

The following text includes all of the current [Appendix C](#) in [[ipp-mod](#)] plus additional values:

[2](#) IANA Considerations

These "media" type3 keyword attribute values will be published by IANA according to the procedures in [RFC 2566 \[rfc2566\] section 6.1](#) with the following URL:

ftp.isi.edu/iana/assignments/ipp/attribute-values/media/engineering.txt

[3](#) Internationalization Considerations

Normally a client will provide localization of the keywords values of this attribute to the language of the user. On the other hand, the client will not localize any name values for the "media" attribute defined by the system administrator of the IPP Printer (see [\[ipp-mod\] section 4.1.2](#) and 4.1.3).

[4](#) Security Considerations

This extension poses no additional security threats or burdens than those in IPP/1.0 [RFC2566, [RFC2565](#)] and IPP/1.1 [[ipp-mod](#), [ipp-pro](#)]. However, implementations MAY support different access control to various media, depending on the identity of the job submitting user.
