YANG Data Model for IS-IS Segment Routing
draft-ietf-isis-sr-yang-10

Abstract

This document defines a YANG data module that can be used to configure and manage IS-IS Segment Routing, as well as a YANG data module for the management of Signaling Maximum SID Depth (MSD) Using IS-IS.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on August 25, 2021.

[1. Overview](#)

YANG [[RFC6020](#)] [[RFC7950](#)] is a data definition language used to define the contents of a conceptual data store that allows networked devices to be managed using NETCONF [[RFC6241](#)]. YANG is proving relevant beyond its initial confines, as bindings to other interfaces (e.g., REST) and encodings other than XML (e.g., JSON) are being defined. Furthermore, YANG data models can be used as the basis for implementation of other interfaces, such as CLI and programmatic APIs.

This document defines a YANG data module that can be used to configure and manage IS-IS Segment Routing [[RFC8667](#)] and it is an augmentation to the IS-IS YANG data model.

This document also defines a YANG data module for the management of Signaling Maximum SID Depth (MSD) Using IS-IS [[RFC8491](#)], which augments the base IS-IS YANG data model.

The YANG modules in this document conform to the Network Management Datastore Architecture (NMDA) [[RFC8342](#)].

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [BCP 14](#) [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

1.2. Tree Diagrams

This document uses the graphical representation of data models defined in [[RFC8340](#)].

2. IS-IS MSD

This document defines a model for Signaling Maximum SID Depth (MSD) Using IS-IS[RFC8667]. It is an augmentation of the IS-IS base model.

The figure below describes the overall structure of the isis-msd YANG module:

```
module: ietf-isis-msd
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:database
    /isis:levels/isis:lsp/isis:router-capabilities:
        +-+ro node-msd-tlv
            +-+ro node-msds* [msd-type]
                +-+ro msd-type      identityref
                +-+ro msd-value?   uint8
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:database
    /isis:levels/isis:lsp/isis:extended-is-neighbor
        /isis:neighbor:
            +-+ro link-msd-sub-tlv
                +-+ro link-msds* [msd-type]
                    +-+ro msd-type      identityref
                    +-+ro msd-value?   uint8
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:database
    /isis:levels/isis:lsp/isis:mt-is-neighbor/isis:neighbor:
        +-+ro link-msd-sub-tlv
            +-+ro link-msds* [msd-type]
                +-+ro msd-type      identityref
                +-+ro msd-value?   uint8

3. IS-IS Segment Routing

This document defines a model for IS-IS Segment Routing feature. It is an augmentation of the IS-IS base model.

The IS-IS SR YANG module requires support for the base segment routing module [[I-D.ietf-spring-sr-yang](#)], which defines the global segment routing configuration independent of any specific routing protocol configuration, and support of IS-IS base model [[I-D.ietf-isis-yang-isis-cfg](#)] which defines basic IS-IS configuration and state.

The figure below describes the overall structure of the isis-sr YANG module:

```

module: ietf-isis-sr
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:
        +-rw segment-routing
            |  +-rw enabled?      boolean
            |  +-rw bindings
            |  |  +-rw advertise
            |  |  |  +-rw policies*   string
            |  |  +-rw receive?      boolean
            +-rw protocol-srgb {sr-mpls:protocol-srgb}?
                +-rw srgb* [lower-bound upper-bound]
                    +-rw lower-bound    uint32
                    +-rw upper-bound    uint32
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis/isis:interfaces
        /isis:interface:
            +-rw segment-routing
                +-rw adjacency-sid
                    +-rw adj-sids* [value]
                        |  +-rw value-type?    enumeration
                        |  +-rw value          uint32
                        |  +-rw protected?     boolean
                        +-rw advertise-adj-group-sid* [group-id]
                            |  +-rw group-id      uint32
                            +-rw advertise-protection?    enumeration
augment /rt:routing/rt:control-plane-protocols

3.1. IS-IS Segment Routing configuration

3.1.1. Segment Routing activation

Activation of segment-routing IS-IS is done by setting the "enable" leaf to true. This triggers advertisement of segment-routing extensions based on the configuration parameters that have been setup using the base segment routing module.

3.1.2. Advertising mapping server policy

The base segment routing module defines mapping server policies. By default, IS-IS will not advertise nor receive any mapping server entry. The IS-IS segment-routing module allows to advertise one or multiple mapping server policies through the "bindings/advertise/policies" leaf-list. The "bindings/receive" leaf allows to enable the reception of mapping server entries.

3.1.3. IP Fast reroute

IS-IS SR model augments the fast-reroute container under interface. It brings the ability to activate TI-LFA (topology independent LFA) and also enhances remote LFA to use segment-routing tunneling instead of LDP.

3.2. IS-IS Segment Routing YANG Module

```

4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF Access Control Model (NACM) [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a pre-configured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., config true, which is the

default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

```
/isis:isis/segment-routing  
/isis:isis/protocol-srgb  
/isis:isis/isis:interfaces/isis:interface/segment-routing
```

Some of the readable data nodes in the modules may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes.

```
/isis:router-capabilities/sr-capability  
/isis:router-capabilities/sr-algorithms  
/isis:router-capabilities/local-blocks  
/isis:router-capabilities/srms-preference  
/isis:router-capabilities/node-msd-tlv
```

And the augmentations to the ISIS link state database.

Unauthorized access to any data node of these subtrees can disclose the operational state information of IS-IS protocol on this device.

5. Contributors

Authors would like to thank Derek Yeung, Acee Lindem, Yi Yang for their major contributions to the draft.

6. Acknowledgements

MITRE has approved this document for Public Release, Distribution Unlimited, with Public Release Case Number 19-3033.

7. IANA Considerations

The IANA is requested to assign two new URIs from the IETF XML registry ([[RFC3688](#)]). Authors are suggesting the following URI:

URI: urn:ietf:params:xml:ns.yang:ietf-isis-sr
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace

URI: urn:ietf:params:xml:ns.yang:ietf-isis-msd
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace

This document also requests one new YANG module name in the YANG Module Names registry ([[RFC6020](#)]) with the following suggestion :

name: ietf-isis-sr
namespace: urn:ietf:params:xml:ns.yang:ietf-isis-sr
prefix: isis-sr
reference: RFC XXXX

name: ietf-isis-msd
namespace: urn:ietf:params:xml:ns.yang:ietf-isis-msd
prefix: isis-msd
reference: RFC XXXX

8. Normative References
