Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

By submitting this Internet-Draft, I accept the provisions of [Section 3 of BCP 78](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress".

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/1id-abstracts.html>

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>

This document is intended to be, after appropriate review and revision, submitted to the RFC Editor as a Standard Track document. Distribution of this document is unlimited. Technical discussion of this document should take place on the IETF LDAP Revision Working Group (LDAPbis) mailing list <ietf-ldapbis@openldap.org>. Please send editorial comments directly to the editor <andrew.sciberras@eb2bcom.com>.

This Internet-Draft expires on 30 July 2006.

Abstract

This document is an integral part of the Lightweight Directory Access Protocol (LDAP) technical specification [[Roadmap](#)]. It provides a technical specification of attribute types and object classes intended for use by LDAP directory clients for many directory services, such as, White Pages. These objects are widely used as a basis for the schema in many LDAP directories. This document does not cover attributes used for the administration of directory servers, nor does it include directory objects defined for specific uses in other documents.

1. Introduction

This document provides an overview of attribute types and object classes intended for use by Lightweight Directory Access Protocol (LDAP) directory clients for many directory services, such as, White Pages. Originally specified in the X.500 [[X.500](#)] documents, these objects are widely used as a basis for the schema in many LDAP directories. This document does not cover attributes used for the administration of directory servers, nor does it include directory objects defined for specific uses in other documents.

1.1 Relationship with other specifications

This document is an integral part of the LDAP technical specification [[Roadmap](#)] which obsoletes the previously defined LDAP technical specification, [RFC 3377](#), in its entirety. In terms of [RFC 2256](#), Sections [6](#) and [8](#) of [RFC 2256](#) are obsoleted by [[Syntaxes](#)]. Sections 5.1, 5.2, 7.1 and 7.2 of [RFC 2256](#) are obsoleted by [[Models](#)]. The remainder of [RFC 2256](#) is obsoleted by this document. [Section 2.4](#) of this document supersedes the technical specification for the 'dc' attribute type and 'dcObject' object class found in [RFC 2247](#). The remainder of [RFC 2247](#) remains in force.

This document updates [RFC 2798](#) by replacing the informative description of the 'uid' attribute type, with the definitive description provided in [Section 2.39](#) of this document.

A number of schema elements which were included in the previous revision of the LDAP Technical Specification are not included in this revision of LDAP. PKI-related schema elements are now specified in [[LDAP-PKI](#)]. Unless reintroduced in future technical specifications, the remainder are to be considered Historic.

The descriptions in this document SHALL be considered definitive for use in LDAP.

1.2 Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC 2119](#) [[RFC2119](#)].

1.3 General Issues

This document references Syntaxes defined in Section 3 of [[Syntaxes](#)] and Matching Rules defined in Section 4 of [[Syntaxes](#)].

The definitions of Attribute Types and Object Classes are written

using the Augmented Backus-Naur Form (ABNF) [[RFC4234](#)] of AttributeTypeDescription and ObjectClassDescription given in [[Models](#)]. Lines have been folded for readability. When such values are transferred as attribute values in the LDAP Protocol the values will not contain line breaks.

2. Attribute Types

The Attribute Types contained in this section hold user information.

There is no requirement that servers implement the 'searchGuide' and 'teletexTerminalIdentifier' attribute types. In fact, their use is greatly discouraged.

An LDAP server implementation SHOULD recognize the rest of the attribute types described in this section.

2.1 'businessCategory'

The 'businessCategory' attribute type describes the kinds of business performed by an organization. Each kind is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.15 NAME 'businessCategory'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Examples: "banking", "transportation" and "real estate".

2.2 'c'

The 'c' ('countryName' in X.500) attribute type contains a two-letter ISO 3166 [[ISO3166](#)] country code.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.6 NAME 'c'
  SUP name
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.11
  SINGLE-VALUE )
```

1.3.6.1.4.1.1466.115.121.1.11 refers to the Country String syntax [[Syntaxes](#)].

Examples: "DE", "AU" and "FR".

2.3 'cn'

The 'cn' ('commonName' in X.500) attribute type contains names of an object. Each name is one value of this multi-valued attribute. If the object corresponds to a person, it is typically the person's full name.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.3 NAME 'cn'
  SUP name )
```

Examples: "Martin K Smith", "Marty Smith" and "printer12".

2.4 'dc'

The 'dc' ('domainComponent' in [RFC 2247](#)) attribute type is a string holding one component, a label, of a DNS domain name [[RFC1034](#)]. The encoding of IA5String for use in LDAP is simply the characters of the ASCII label. The equality matching rule is case insensitive, as is today's DNS.

(Source: [RFC 2247](#) [[RFC2247](#)])

```
( 0.9.2342.19200300.100.1.25 NAME 'dc'
  EQUALITY caseIgnoreIA5Match
  SUBSTR caseIgnoreIA5SubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.26
  SINGLE-VALUE )
```

1.3.6.1.4.1.1466.115.121.1.26 refers to the IA5 String syntax [[Syntaxes](#)].

Examples: Valid values include "example" and "com". The value "example.com" is invalid, because it contains two label components.

Directory applications supporting International Domain Names SHALL use the ToASCII method [[RFC3490](#)] to produce the domain name component label. The special considerations discussed in [section 4 of RFC 3490](#) [[RFC3490](#)] should be taken, depending on whether the domain component is used for "stored" or "query" purposes.

2.5 'description'

The 'description' attribute type contains human-readable descriptive phrases about the object. Each description is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.13 NAME 'description'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Examples: "a color printer", "Maintenance is done every Monday, at 1pm." and "distribution list for all technical staff".

2.6 'destinationIndicator'

The 'destinationIndicator' attribute type contains country and city strings, associated with the object (the addressee), needed to provide the Public Telegram Service. The strings are composed in accordance with CCITT Recommendations F.1 [[F.1](#)] and F.31 [[F.31](#)]. Each string is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.27 NAME 'destinationIndicator'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.44 )
```

1.3.6.1.4.1.1466.115.121.1.44 refers to the Printable String syntax [[Syntaxes](#)].

Examples: "AASD" as a destination indicator for Sydney, Australia.
 "GBLD" as a destination indicator for London, United Kingdom.

It is noted that the directory will not ensure that values of this attribute conform to the F.1 and F.30 CCITT Recommendations. It is the application's responsibility to ensure destination indicators that it stores in this attribute are appropriately constructed.

2.7 'distinguishedName'

The 'distinguishedName' attribute type is not used as the name of the object itself, but it is instead a base type from which some user

attribute types with a DN syntax can inherit.

It is unlikely that values of this type itself will occur in an entry. LDAP server implementations which do not support attribute subtyping need not recognize this attribute in requests. Client implementations MUST NOT assume that LDAP servers are capable of performing attribute subtyping.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.49 NAME 'distinguishedName'
  EQUALITY distinguishedNameMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.12 )
```

1.3.6.1.4.1.1466.115.121.1.12 refers to the DN syntax [[Syntaxes](#)].

[2.8](#) 'dnQualifier'

The 'dnQualifier' attribute type contains disambiguating information strings to add to the relative distinguished name of an entry. The information is intended for use when merging data from multiple sources in order to prevent conflicts between entries which would otherwise have the same name. Each string is one value of this multi-valued attribute. It is recommended that a value of the 'dnQualifier' attribute be the same for all entries from a particular source.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.46 NAME 'dnQualifier'
  EQUALITY caseIgnoreMatch
  ORDERING caseIgnoreOrderingMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.44 )
```

1.3.6.1.4.1.1466.115.121.1.44 refers to the Printable String syntax [[Syntaxes](#)].

Examples: "20050322123345Z" - timestamps can be used to disambiguate information.
 "123456A" - serial numbers can be used to disambiguate information.

[2.9](#) 'enhancedSearchGuide'

The 'enhancedSearchGuide' attribute type contains sets of information for use by directory clients in constructing search filters. Each set is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.47 NAME 'enhancedSearchGuide'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.21 )
```

1.3.6.1.4.1.1466.115.121.1.21 refers to the Enhanced Guide syntax [[Syntaxes](#)].

Examples: "person#(sn\$APPROX)#wholeSubtree" and
"organizationalUnit#(ou\$SUBSTR)#oneLevel".

[2.10](#) 'facsimileTelephoneNumber'

The 'facsimileTelephoneNumber' attribute type contains telephone numbers (and, optionally, the parameters) for facsimile terminals. Each telephone number is one value of this multi-valued attribute. (Source: X.520 [[X.520](#)])

```
( 2.5.4.23 NAME 'facsimileTelephoneNumber'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.22 )
```

1.3.6.1.4.1.1466.115.121.1.22 refers to the Facsimile Telephone Number syntax [[Syntaxes](#)].

Examples: "+61 3 9896 7801" and "+81 3 347 7418\$fineResolution".

[2.11](#) 'generationQualifier'

The 'generationQualifier' attribute type contains name strings that are the part of a person's name which typically is the suffix. Each string is one value of this multi-valued attribute. (Source: X.520 [[X.520](#)])

```
( 2.5.4.44 NAME 'generationQualifier'
  SUP name )
```

Examples: "III", "3rd" and "Jr.".

[2.12](#) 'givenName'

The 'givenName' attribute type contains name strings that are the part of a person's name which is not their surname. Each string is one value of this multi-valued attribute. (Source: X.520 [[X.520](#)])

```
( 2.5.4.42 NAME 'givenName'
  SUP name )
```

Examples: "Andrew", "Charles" and "Joanne".

2.13 'houseIdentifier'

The 'houseIdentifier' attribute type contains identifiers for a building within a location. Each identifier is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.51 NAME 'houseIdentifier'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Examples: "20" to represent the house number 20.

2.14 'initials'

The 'initials' attribute type contains strings of initials of some or all of an individual's names, except the surname(s). Each string is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.43 NAME 'initials'
  SUP name )
```

Examples: "K. A." and "K".

2.15 'internationalISDNNumber'

The 'internationalISDNNumber' attribute type contains Integrated Services Digital Network (ISDN) addresses, as defined in the International Telecommunication Union (ITU) Recommendation E.164 [[E.164](#)]. Each address is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.25 NAME 'internationalISDNNumber'
  EQUALITY numericStringMatch
  SUBSTR numericStringSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.36 )
```

1.3.6.1.4.1.1466.115.121.1.36 refers to the Numeric String syntax [[Syntaxes](#)].

Example: "0198 333 333".

2.16 'l'

The 'l' ('localityName' in X.500) attribute type contains names of a locality or place, such as a city, county or other geographic region. Each name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.7 NAME 'l'
  SUP name )
```

Examples: "Geneva", "Paris" and "Edinburgh".

2.17 'member'

The 'member' attribute type contains the Distinguished Names of objects that are on a list or in a group. Each name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.31 NAME 'member'
  SUP distinguishedName )
```

Examples: "cn=James Clarke,ou=Finance,o=Widget\, Inc." and "cn=John Xerri,ou=Finance,o=Widget\, Inc." may be two members of the financial team (group) at Widget, Inc. In which case, both of these distinguished names would be present as individual values of the member attribute.

2.18 'name'

The 'name' attribute type is the attribute supertype from which user attribute types with the name syntax inherit. Such attribute types are typically used for naming. The attribute type is multi-valued.

It is unlikely that values of this type itself will occur in an entry. LDAP server implementations which do not support attribute subtyping need not recognize this attribute in requests. Client implementations MUST NOT assume that LDAP servers are capable of performing attribute subtyping.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.41 NAME 'name'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

[2.19](#) 'o'

The 'o' ('organizationName' in X.500) attribute type contains the names of an organization. Each name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.10 NAME 'o'
   SUP name )
```

Examples: "Widget", "Widget, Inc." and "Widget, Incorporated.".

[2.20](#) 'ou'

The 'ou' ('organizationalUnitName' in X.500) attribute type contains the names of an organizational unit. Each name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.11 NAME 'ou'
   SUP name )
```

Examples: "Finance", "Human Resources" and "Research and Development".

[2.21](#) 'owner'

The 'owner' attribute type contains the Distinguished Names of objects that have an ownership responsibility for the object that is owned. Each owner's name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.32 NAME 'owner'
   SUP distinguishedName )
```

Example: The mailing list object, whose DN is "cn=All Employees, ou=Mailing List,o=Widget\, Inc.", is owned by the Human Resources Director. Therefore, the value of the 'owner' attribute within the mailing list object, would be the DN of the director (role): "cn=Human Resources Director,ou=employee,o=Widget\, Inc.".

[2.22](#) 'physicalDeliveryOfficeName'

The 'physicalDeliveryOfficeName' attribute type contains names that a Postal Service uses to identify a post office.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.19 NAME 'physicalDeliveryOfficeName'  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Examples: "Bremerhaven, Main" and "Bremerhaven, Bonnstrasse".

2.23 'postalAddress'

The 'postalAddress' attribute type contains addresses used by a Postal Service to perform services for the object. Each address is one value of this multi-valued attribute.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.16 NAME 'postalAddress'  
  EQUALITY caseIgnoreListMatch  
  SUBSTR caseIgnoreListSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.41 )
```

1.3.6.1.4.1.1466.115.121.1.41 refers to the Postal Address syntax [[Syntaxes](#)].

Example: "15 Main St.\$Ottawa\$Canada".

2.24 'postalCode'

The 'postalCode' attribute type contains codes used by a Postal Service to identify postal service zones. Each code is one value of this multi-valued attribute.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.17 NAME 'postalCode'  
  EQUALITY caseIgnoreMatch  
  SUBSTR caseIgnoreSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Example: "22180", to identify Vienna, VA in the USA.

2.25 'postOfficeBox'

The 'postOfficeBox' attribute type contains postal box identifiers that a Postal Service uses when a customer arranges to receive mail

at a box on premises of the Postal Service. Each postal box identifier is a single value of this multi-valued attribute.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.18 NAME 'postOfficeBox'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Example: "Box 45".

[2.26](#) 'preferredDeliveryMethod'

The 'preferredDeliveryMethod' attribute type contains an indication of the preferred method of getting a message to the object.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.28 NAME 'preferredDeliveryMethod'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.14
  SINGLE-VALUE )
```

1.3.6.1.4.1.1466.115.121.1.14 refers to the Delivery Method syntax [[Syntaxes](#)].

Example: If the mhs-delivery Delivery Method is preferred over telephone-delivery, which is preferred over all other methods, the value would be: "mhs \$ telephone".

[2.27](#) 'registeredAddress'

The 'registeredAddress' attribute type contains postal addresses suitable for reception of telegrams or expedited documents, where it is necessary to have the recipient accept delivery. Each address is one value of this multi-valued attribute.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.26 NAME 'registeredAddress'
  SUP postalAddress
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.41 )
```

1.3.6.1.4.1.1466.115.121.1.41 refers to the Postal Address syntax [[Syntaxes](#)].

Example: "Receptionist\$Widget, Inc.\$15 Main St.\$Ottawa\$Canada".

[2.28](#) 'roleOccupant'

The 'roleOccupant' attribute type contains the Distinguished Names of objects (normally people) that fulfill the responsibilities of a role object. Each distinguished name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.33 NAME 'roleOccupant'
  SUP distinguishedName )
```

Example: The role object, "cn=Human Resources Director,ou=Position,o=Widget\, Inc.", is fulfilled by two people whose object names are "cn=Mary Smith,ou=employee,o=Widget\, Inc." and "cn=James Brown,ou=employee,o=Widget\, Inc.". The 'roleOccupant' attribute will contain both of these distinguished names, since they are the occupants of this role.

[2.29](#) 'searchGuide'

The 'searchGuide' attribute type contains sets of information for use by clients in constructing search filters. It is superseded by 'enhancedSearchGuide', described above in [section 2.9](#). Each set is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.14 NAME 'searchGuide'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.25 )
```

1.3.6.1.4.1.1466.115.121.1.25 refers to the Guide syntax [[Syntaxes](#)].

Example: "person#sn\$EQ".

[2.30](#) 'seeAlso'

The 'seeAlso' attribute type contains Distinguished Names of objects that are related to the subject object. Each related object name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.34 NAME 'seeAlso'
  SUP distinguishedName )
```

Example: The person object, "cn=James Brown,ou=employee,o=Widget\, Inc." is related to the role objects, "cn=Football Team Captain,ou=sponsored activities,o=Widget\, Inc." and "cn=Chess Team,ou=sponsored activities,o=Widget\, Inc.".

Since the role objects are related to the person object, the 'seeAlso' attribute will contain the distinguished name of each role object as separate values.

2.31 'serialNumber'

The 'serialNumber' attribute type contains the serial numbers of devices. Each serial number is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.5 NAME 'serialNumber'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.44 )
```

1.3.6.1.4.1.1466.115.121.1.44 refers to the Printable String syntax [[Syntaxes](#)].

Examples: "WI-3005" and "XF551426".

2.32 'sn'

The 'sn' ('surname' in X.500) attribute type contains name strings for the family names of a person. Each string is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.4 NAME 'sn'
  SUP name )
```

Example: "Smith".

2.33 'st'

The 'st' ('stateOrProvinceName' in X.500) attribute type contains the full names of states or provinces. Each name is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.8 NAME 'st'
  SUP name )
```

Example: "California".

2.34 'street'

The 'street' ('streetAddress' in X.500) attribute type contains site information from a postal address (i.e., the street name, place, avenue, and the house number.). Each street is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.9 NAME 'street'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Example: "15 Main St.".

2.35 'telephoneNumber'

The 'telephoneNumber' attribute type contains telephone numbers that comply with the ITU Recommendation E.123 [[E.123](#)]. Each number is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.20 NAME 'telephoneNumber'
  EQUALITY telephoneNumberMatch
  SUBSTR telephoneNumberSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.50 )
```

1.3.6.1.4.1.1466.115.121.1.50 refers to the Telephone Number syntax [[Syntaxes](#)].

Example: "+1 234 567 8901".

2.36 'teletexTerminalIdentifier'

The withdrawal of Rec. F.200 has resulted in the withdrawal of this attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.22 NAME 'teletexTerminalIdentifier'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.51 )
```

1.3.6.1.4.1.1466.115.121.1.51 refers to the Teletex Terminal Identifier syntax [[Syntaxes](#)].

[2.37](#) 'telexNumber'

The 'telexNumber' attribute type contains sets of strings which are a telex number, country code, and answerback code of a telex terminal. Each set is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.21 NAME 'telexNumber'
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.52 )
```

1.3.6.1.4.1.1466.115.121.1.52 refers to the Telex Number syntax [[Syntaxes](#)].

Example: "12345\$023\$ABCDE".

[2.38](#) 'title'

The 'title' attribute type contains the title of a person in their organizational context. Each title is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.12 NAME 'title'
  SUP name )
```

Examples: "Vice President", "Software Engineer" and "CEO".

[2.39](#) 'uid'

The 'uid' ('userid' in [RFC 1274](#)) attribute type contains computer system login names associated with the object. Each name is one value of this multi-valued attribute.

(Source: [RFC 2798](#) [[RFC2798](#)] and [RFC 1274](#) [[RFC1274](#)])

```
( 0.9.2342.19200300.100.1.1 NAME 'uid'
  EQUALITY caseIgnoreMatch
  SUBSTR caseIgnoreSubstringsMatch
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.15 )
```

1.3.6.1.4.1.1466.115.121.1.15 refers to the Directory String syntax [[Syntaxes](#)].

Examples: "s9709015", "admin" and "Administrator".

[2.40](#) 'uniqueMember'

The 'uniqueMember' attribute type contains the Distinguished Names of an object that is on a list or in a group, where the Relative Distinguished Names of the object include a value that distinguishes

between objects when a distinguished name has been reused. Each distinguished name is one value of this multi-valued attribute.
(Source: X.520 [[X.520](#)])

```
( 2.5.4.50 NAME 'uniqueMember'  
  EQUALITY uniqueMemberMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.34 )
```

1.3.6.1.4.1.1466.115.121.1.34 refers to the Name and Optional UID syntax [[Syntaxes](#)].

Example: If "ou=1st Battalion,o=Defense,c=US" is a battalion that was disbanded, establishing a new battalion with the "same" name would have a unique identifier value added, resulting in "ou=1st Battalion, o=Defense,c=US#'010101'B".

[2.41](#) 'userPassword'

The 'userPassword' attribute contains octet strings that are known only to the user and the system to which the user has access. Each string is one value of this multi-valued attribute.

The application SHOULD prepare textual strings used as passwords by transcoding them to Unicode, applying SASLprep [[RFC4013](#)], and encoding as UTF-8. The determination of whether a password is textual is a local client matter.
(Source: X.509 [[X.509](#)])

```
( 2.5.4.35 NAME 'userPassword'  
  EQUALITY octetStringMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.40 )
```

1.3.6.1.4.1.1466.115.121.1.40 refers to the Octet String syntax [[Syntaxes](#)].

Passwords are stored using an Octet String syntax and are not encrypted. Transfer of cleartext passwords is strongly discouraged where the underlying transport service cannot guarantee confidentiality and may result in disclosure of the password to unauthorized parties.

An example of a need for multiple values in the 'userPassword' attribute is an environment where every month the user was expected to use a different password generated by some automated system. During transitional periods, like the last and first day of the periods, it may be necessary to allow two passwords for the two consecutive periods to be valid in the system.

[2.42](#) 'x121Address'

The 'x121Address' attribute type contains data network addresses as defined by ITU Recommendation X.121 [[X.121](#)]. Each address is one value of this multi-valued attribute.

(Source: X.520 [[X.520](#)])

```
( 2.5.4.24 NAME 'x121Address'  
  EQUALITY numericStringMatch  
  SUBSTR numericStringSubstringsMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.36 )
```

1.3.6.1.4.1.1466.115.121.1.36 refers to the Numeric String syntax [[Syntaxes](#)].

Example: "36111222333444555".

[2.43](#) 'x500UniqueIdentifier'

The 'x500UniqueIdentifier' attribute type contains binary strings that are used to distinguish between objects when a distinguished name has been reused. Each string is one value of this multi-valued attribute.

In X.520 [[X.520](#)], this attribute type is called 'uniqueIdentifier'. This is a different attribute type from both the 'uid' and 'uniqueIdentifier' LDAP attribute types. The 'uniqueIdentifier' attribute type is defined in [[RFC1274](#)].

(Source: X.520 [[X.520](#)])

```
( 2.5.4.45 NAME 'x500UniqueIdentifier'  
  EQUALITY bitStringMatch  
  SYNTAX 1.3.6.1.4.1.1466.115.121.1.6 )
```

1.3.6.1.4.1.1466.115.121.1.6 refers to the Bit String syntax [[Syntaxes](#)].

3. Object Classes

LDAP servers SHOULD recognize all the Object Classes listed here as values of the 'objectClass' attribute (see [[Models](#)]).

3.1 'applicationProcess'

The 'applicationProcess' object class definition is the basis of an entry which represents an application executing in a computer system. (Source: X.521 [[X.521](#)])

```
( 2.5.6.11 NAME 'applicationProcess'
  SUP top
  STRUCTURAL
  MUST cn
  MAY ( seeAlso $
        ou $
        l $
        description ) )
```

3.2 'country'

The 'country' object class definition is the basis of an entry which represents a country. (Source: X.521 [[X.521](#)])

```
( 2.5.6.2 NAME 'country'
  SUP top
  STRUCTURAL
  MUST c
  MAY ( searchGuide $
        description ) )
```

3.3 'dcObject'

The 'dcObject' object class permits an entry to contains domain component information. This object class is defined as auxiliary, because it will be used in conjunction with an existing structural object class. (Source: [RFC 2247](#) [[RFC2247](#)])

```
( 1.3.6.1.4.1.1466.344 NAME 'dcObject'
  SUP top
  AUXILIARY
  MUST dc )
```

[3.4](#) 'device'

The 'device' object class is the basis of an entry which represents an appliance, computer or network element.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.14 NAME 'device'
  SUP top
  STRUCTURAL
  MUST cn
  MAY ( serialNumber $
        seeAlso $
        owner $
        ou $
        o $
        l $
        description ) )
```

[3.5](#) 'groupOfNames'

The 'groupOfNames' object class is the basis of an entry which represents a set of named objects including information related to the purpose or maintenance of the set.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.9 NAME 'groupOfNames'
  SUP top
  STRUCTURAL
  MUST ( member $
        cn )
  MAY ( businessCategory $
        seeAlso $
        owner $
        ou $
        o $
        description ) )
```

[3.6](#) 'groupOfUniqueNames'

The 'groupOfUniqueNames' object class is the same as the 'groupOfNames' object class except that the object names are not repeated or reassigned within a set scope.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.17 NAME 'groupOfUniqueNames'
  SUP top
  STRUCTURAL
  MUST ( uniqueMember $
```

```
        cn )
    MAY ( businessCategory $
          seeAlso $
          owner $
          ou $
          o $
          description ) )
```

3.7 'locality'

The 'locality' object class is the basis of an entry which represents a place in the physical world.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.3 NAME 'locality'
  SUP top
  STRUCTURAL
  MAY ( street $
        seeAlso $
        searchGuide $
        st $
        l $
        description ) )
```

3.8 'organization'

The 'organization' object class is the basis of an entry which represents a structured group of people.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.4 NAME 'organization'
  SUP top
  STRUCTURAL
  MUST o
  MAY ( userPassword $ searchGuide $ seeAlso $
        businessCategory $ x121Address $ registeredAddress $
        destinationIndicator $ preferredDeliveryMethod $
        telexNumber $ teletexTerminalIdentifier $
        telephoneNumber $ internationaliSDNNumber $
        facsimileTelephoneNumber $ street $ postOfficeBox $
        postalCode $ postalAddress $ physicalDeliveryOfficeName $
        st $ l $ description ) )
```

3.9 'organizationalPerson'

The 'organizationalPerson' object class is the basis of an entry which represents a person in relation to an organization.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.7 NAME 'organizationalPerson'
  SUP person
  STRUCTURAL
  MAY ( title $ x121Address $ registeredAddress $
        destinationIndicator $ preferredDeliveryMethod $
        telexNumber $ teletexTerminalIdentifier $

        seeAlso $ roleOccupant $ preferredDeliveryMethod $
        street $ postOfficeBox $ postalCode $ postalAddress $
        physicalDeliveryOfficeName $ ou $ st $ l $
        description ) )
```

3.11 'organizationalUnit'

The 'organizationalUnit' object class is the basis of an entry which represents a piece of an organization.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.5 NAME 'organizationalUnit'
  SUP top
  STRUCTURAL
  MUST ou
  MAY ( businessCategory $ description $ destinationIndicator $
        facsimileTelephoneNumber $ internationaliSDNNumber $ l $
        physicalDeliveryOfficeName $ postalAddress $ postalCode $
        postOfficeBox $ preferredDeliveryMethod $
        registeredAddress $ searchGuide $ seeAlso $ st $ street $
        telephoneNumber $ teletexTerminalIdentifier $
        telexNumber $ userPassword $ x121Address ) )
```

[3.12](#) 'person'

The 'person' object class is the basis of an entry which represents a human being.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.6 NAME 'person'
  SUP top
  STRUCTURAL
  MUST ( sn $
        cn )
  MAY ( userPassword $
        telephoneNumber $
        seeAlso $ description ) )
```

[3.13](#) 'residentialPerson'

The 'residentialPerson' object class is the basis of an entry which includes a person's residence in the representation of the person.

(Source: X.521 [[X.521](#)])

```
( 2.5.6.10 NAME 'residentialPerson'
  SUP person
  STRUCTURAL
  MUST 1
  MAY ( businessCategory $ x121Address $ registeredAddress $
        destinationIndicator $ preferredDeliveryMethod $
        telexNumber $ teletexTerminalIdentifier $

        facsimileTelephoneNumber $ preferredDeliveryMethod $
        street $ postOfficeBox $ postalCode $ postalAddress $
        physicalDeliveryOfficeName $ st $ l ) )
```

[3.14](#) 'uidObject'

The 'uidObject' object class permits an entry to contains user identification information. This object class is defined as auxiliary, because it will be used in conjunction with an existing structural object class.

(Source: [RFC 2377](#) [[RFC2377](#)])

```
( 1.3.6.1.1.3.1 NAME 'uidObject'
  SUP top
  AUXILIARY
  MUST uid )
```

4. IANA Considerations

It is requested that the Internet Assigned Numbers Authority (IANA) update the LDAP descriptors registry as indicated in the following template:

Subject: Request for LDAP Descriptor Registration Update
 Descriptor (short name): see comment
 Object Identifier: see comment
 Person & email address to contact for further information:
 Andrew Sciberras <andrew.sciberras@eb2bcom.com>
 Usage: (A = attribute type, O = Object Class) see comment
 Specification: RFC XXXX [editor's note: The RFC number will be
 the one assigned to this document.]
 Author/Change Controller: IESG

Comments

In the LDAP descriptors registry, the following descriptors (short names) should be updated to refer to RFC XXXX [editor's note: This document]. Names that need to be reserved, rather than assigned to an Object Identifier, will contain an Object Identifier value of RESERVED.

NAME	Type	OID

5. Security Considerations

Attributes of directory entries are used to provide descriptive information about the real-world objects they represent, which can be people, organizations or devices. Most countries have privacy laws

regarding the publication of information about people.

Transfer of cleartext passwords is strongly discouraged where the underlying transport service cannot guarantee confidentiality and integrity, since this may result in disclosure of the password to unauthorized parties.

Multiple attribute values for the 'userPassword' attribute need to be used with care. Especially reset/deletion of a password by an admin without knowing the old user password gets tricky or impossible if multiple values for different applications are present.

Certainly, applications which intend to replace the 'userPassword' value(s) with new value(s) should use modify/replaceValues (or modify/deleteAttribute+addAttribute). Additionally, server implementations are encouraged to provide administrative controls which, if enabled, restrict the 'userPassword' attribute to one value.

Note that when used for authentication purposes [[AuthMeth](#)], the user need only prove knowledge of one of the values, not all of the values.

6. Acknowledgements

The definitions, on which this document is based, have been developed by committees for telecommunications and international standards.

This document is an update of [RFC 2256](#) by Mark Wahl. [RFC 2256](#) was a product of the IETF ASID Working Group.

The 'dc' attribute type definition and the 'dcObject' object class definition in this document supersede the specification in [RFC 2247](#) by S. Kille, M. Wahl, A. Grimstad, R. Huber, and S. Sataluri.

The 'uid' attribute type definition in this document supersedes the specification of the 'userid' in [RFC 1274](#) by P. Barker and S. Kille and of the uid in [RFC 2798](#) by M. Smith.

The 'uidObject' object class definition in this document supersedes the specification of the 'uidObject' in [RFC 2377](#) by A. Grimstad, R. Huber, S. Sataluri and M. Smith.

This document is based upon input of the IETF LDAPBIS working group. The author wishes to thank S. Legg and K. Zeilenga for their significant contribution to this update. The author would also like to thank Kathy Dally who edited early drafts of this document.

9. Intellectual Property Statement

The IETF takes no position regarding the validity or scope of any Intellectual Property Rights or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; nor does it represent that it has made any independent effort to identify any such rights. Information on the procedures with respect to rights in RFC documents can be found in [BCP 78](#) and [BCP 79](#).

Copies of IPR disclosures made to the IETF Secretariat and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this specification can be obtained from the IETF on-line IPR repository at <http://www.ietf.org/ipr>.

The IETF invites any interested party to bring to its attention any copyrights, patents or patent applications, or other proprietary rights that may cover technology that may be required to implement this standard. Please address the information to the IETF at ietf-ipr@ietf.org.

10. Full Copyright Statement

Copyright (C) The Internet Society (2006).

This document is subject to the rights, licenses and restrictions contained in [BCP 78](#), and except as set forth therein, the authors retain all their rights.

This document and the information contained herein are provided on an "AS IS" basis and THE CONTRIBUTOR, THE ORGANIZATION HE/SHE REPRESENTS OR IS SPONSORED BY (IF ANY), THE INTERNET SOCIETY AND THE INTERNET ENGINEERING TASK FORCE DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

[Appendix A](#) Changes Made Since [RFC 2256](#)

This appendix lists the changes that have been made from [RFC 2256](#) to this I-D.

This appendix is not a normative part of this specification, which has been provided for informational purposes only.

1. Replaced the document title.
2. Removed the IESG Note.
3. Dependencies on [RFC 1274](#) have been eliminated.
4. Added a Security Considerations section and an IANA considerations section.
5. Deleted the conformance requirement for subschema object classes in favor of a statement in [[Syntaxes](#)].
6. Added explanation to attribute types and to each object class.
7. Removed [Section 4](#), Syntaxes, and [Section 6](#), Matching Rules, (moved to [[Syntaxes](#)]).
8. Removed the certificate-related attribute types:
authorityRevocationList, cACertificate,
certificateRevocationList, crossCertificatePair,
deltaRevocationList, supportedAlgorithms, and userCertificate.

Removed the certificate-related Object Classes:
certificationAuthority, certificationAuthority-V2,
cRLDistributionPoint, strongAuthenticationUser, and
userSecurityInformation

LDAP PKI is now discussed in [LDAP-CRL] and [LDAP-CERT].
9. Removed the dmdName, knowledgeInformation,
presentationAddress, protocolInformation, and
supportedApplicationContext attribute types and the dmd,
applicationEntity, and dSA object classes.
10. Deleted the aliasedObjectName and objectClass attribute type
definitions. Deleted the alias and top object class
definitions. They are included in [[Models](#)].
11. Added the 'dc' attribute type from [RFC 2247](#).

12. Numerous editorial changes.

13. Removed upper bound after the SYNTAX oid in all attribute definitions where it appeared.

14. Added text about Unicode, SASLprep and UTF-8 for userPassword.

changes since 07:

15. Corrected examples in preferredDeliveryMethod, uniqueMember, postalAddress, and registeredAddress attribute types.

16. Clarified and corrected examples in owner and roleOccupant attribute types.

17. Added [RFC 2234](#) to normative references.

18. Added [RFC 1274](#) and [RFC 2798](#) to informative references.

19. Removed the statement about [RFC 2026](#) conformance.

20. Added the IPR Disclosure and Notice

21. Updated the Copyright text.

changes since 08:

22. Included [RFC 2377](#) into Updates header and Informative References

23. Changed Editor information to Andrew Sciberras.

24. Updated I-D Template information.

25. References made consistent with other LDAPbis ID's. [ROADMAP] -> [RoadMap] and [AUTHMETH] -> [[AuthMeth](#)].

26. Changed Introduction to include an (LDAP) acronym after the first usage.

27. Renamed [section 1.1](#) to "Relationship with other specifications" from "Situation".

28. Included definitions, comments and references for 'dcObject' and 'uidObject'.

29. Replaced PKI schema references to use [draft-zeilenga-ldap-x509-xx](#)

30. Spelt out and referenced ABNF on first usage.
31. Removed [Section 2.4](#) (Source). Replaced the source table with explicit references for each definition.
32. All references to an attribute type or object class are enclosed in single quotes.
33. The layout of attribute type definitions has been changed to provide consistency throughout the document:
 - > Section Heading
 - > Description of Attribute type
 - > Multivalued description
 - > Source Information
 - > Definition
 - > Example
 - > Additional Comments

Adding this consistent output included the addition of examples to some definitions.
34. References to alternate names for attributes types are provided with a reference to where they were originally specified.
35. Clarification of the description of 'distinguishedName' and 'name', in regards to these attribute types being supertypes.
36. Spelt out ISDN on first usage.
37. Inserted a reference to [\[Syntaxes\]](#) for the 'teletexTerminalIdentifier' definition's SYNTAX OID.
38. Additional names were added to the IANA Considerations. Names include 'commonName', 'dcObject', 'domainComponent', 'GN', 'localityName', 'organizationName', 'organizationUnitName', 'surname', 'uidObject' and 'userid'.
39. Renamed all instances of supercede to supersede.
40. Moved [\[F.1\]](#), [F.30] and [SASLprep] from informative to normative references.
41. Changed the 'c' definition to be consistent with X.500.
42. Added text to 'dc', making the distinction between 'stored' and 'query' values when preparing IDN strings.
