LISP Configuration YANG Model
draft-ietf-lisp-yang-00

Abstract

This document describes a YANG data model to use with the Locator/ID Separation Protocol (LISP).

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on March 4, 2016.

[1.](#) Introduction

The Locator/ID Separation Protocol (LISP) defines several network elements subject to be configured. This document presents the YANG data models required for basic configuration of all major LISP

[RFC6830]elements. The models also capture some essential operational data elements as well.

[2.](#) LISP Module

This module is the base LISP module that is augmented in multiple models to represent various LISP device roles.

[2.1.](#) Module Structure

```
module: ietf-lisp
  +--rw lisp
  |   +--rw devices
  |       +--rw device* [type id]
  |           +--rw type      device-ref
  |           +--rw id        string
  |           +--rw enabled?  boolean
  +--ro lisp-state
      +--ro devices
          +--ro device* [type id]
              +--ro type      device-ref
              +--ro id        string
```

[2.2.](#) Module Definition

```
module ietf-lisp {
  namespace "urn:ietf:params:xml:ns:yang:ietf-lisp";
  prefix lisp;
  import ietf-interfaces {
    prefix if;
  }
  import lisp-address-types {
    prefix lcaf;
  }
  organization

3. LISP-ITR Module

This module captures the configuration data model of a LISP ITR. The model also captures some operational data elements.

3.1. Module Structure

```

[4.](#) LISP ETR Module

This module captures the configuration data model of a LISP ETR. The model also captures some operational data elements.

[4.1.](#) Module Structure

5. LISP Map Server Module

This module captures the configuration data model of a LISP Map Server [RFC6833]. The model also captures some operational data elements.

5.1. Module Structure

```

module: lisp-map-server
augment /lisp:lisp/lisp:devices/lisp:device:
  +--rw map-server-cfg!
