LISP YANG Model
draft-ietf-lisp-yang-05

Abstract

This document describes a YANG data model to use with the Locator/ID Separation Protocol (LISP).

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 4, 2018.

[1.](#) Introduction

The Locator/ID Separation Protocol (LISP) defines several network elements subject to be configured. This document presents the YANG data models required for basic configuration of all major LISP [[RFC6830](#)] elements. The models also capture some essential operational data elements as well.

[2.](#) LISP Module

This module is the base LISP module that is augmented in multiple models to represent various LISP device roles.

<CODE ENDS>

```

[6.](#) LISP-Map-Resolver Module

This module captures the configuration data model of a LISP Map Resolver [[RFC6833](#)]. The model also captures some operational data elements.

[6.1.](#) Module Structure

```

module: ietf-lisp-mapresolver
augment /lisp:lisp/lisp:lisp-router-instances/lisp:lisp-router-instance:
  +--rw map-resolver!
    +--rw mapping-system-type?    lisp:mapping-system-ref
    +--rw ms-address?             inet:ip-address

```

[6.2.](#) Module Definition
