YANG Module for IS-IS Reverse Metric

Abstract

This document defines a YANG module for managing the reverse metric extension to the the intermediate system to intermediate system routeing protocol.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 9 July 2021.

1. Introduction

This document defines a YANG module for managing the reverse metric extension to the intermediate system to intermediate system routing protocol (IS-IS) [[RFC8500](#)], [[IS010589](#)]. Please refer to [[RFC8500](#)] for the description and definition of the functionality managed by this module.

The YANG data model described in this document conforms to the Network Management Datastore Architecture defined in [[RFC8342](#)].

2. YANG Management

2.1. YANG Tree

The following is the YANG tree diagram ([[RFC8340](#)]) for the IS-IS reverse metric extension additions.

```

module: ietf-isis-reverse-metric
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis:
    +--rw reverse-metric
        +--rw enable-receive?    boolean
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis/isis:interfaces
    /isis:interface:
    +--rw reverse-metric
        +--rw reverse-metric
            | +--rw metric?          isis:wide-metric
            | +--rw flags
            | | +--rw whole-lan?      boolean
            | | +--rw allow-unreachable? boolean
            | +--rw exclude-te-metric? boolean
        +--rw level-1
            | +--rw reverse-metric
            |   +--rw metric?          isis:wide-metric
            |   +--rw flags
            |   | +--rw whole-lan?      boolean
            |   | +--rw allow-unreachable? boolean
            |   +--rw exclude-te-metric? boolean
        +--rw level-2
            +--rw reverse-metric
                +--rw metric?          isis:wide-metric
                +--rw flags
                | +--rw whole-lan?      boolean
                | +--rw allow-unreachable? boolean
                +--rw exclude-te-metric? boolean
augment /rt:routing/rt:control-plane-protocols
    /rt:control-plane-protocol/isis:isis/isis:interfaces
    /isis:interface/isis:adjacencies/isis:adjacency:
    +--ro reverse-metric
        +--ro metric?          isis:wide-metric
        +--ro flags
            | +--ro whole-lan?      boolean
            | +--ro allow-unreachable? boolean
        +--ro te-metric?    uint32

```

2.2. YANG Module

The following is the YANG module for managing the IS-IS reverse metric functionality defined in [\[RFC8500\]](#). It imports modules from the following RFCs: [\[RFC8349\]](#), [\[I-D.ietf-isis-yang-isis-cfg\]](#).

```

<CODE BEGINS> file "ietf-isis-reverse-metric@2021-01-05.yang"
module ietf-isis-reverse-metric {
  yang-version 1.1;
  namespace "urn:ietf:params:xml:ns:yang:ietf-isis-reverse-metric";
  prefix isis-rmetric;

  import ietf-routing {
    prefix rt;
    reference
      "RFC8349: A YANG Data Model for Routing Management (NMDA Version)";
  }
  import ietf-isis {

}
<CODE ENDS>

```

3. IANA Considerations

3.1. Updates to the IETF XML Registry

This document registers a URI in the "IETF XML Registry" [[RFC3688](#)]. Following the format in [[RFC3688](#)], the following registration has been made:

URI urn:ietf:params:xml:ns:yang:ietf-isis-reverse-metric

Registrant Contact The IESG.

XML N/A; the requested URI is an XML namespace.

3.2. Updates to the YANG Module Names Registry

This document registers one YANG module in the "YANG Module Names" registry [[RFC6020](#)]. Following the format in [[RFC6020](#)], the following registration has been made:

name ietf-isis-reverse-metric

namespace urn:ietf:params:xml:ns:yang:ietf-isis-reverse-metric

prefix isis-rmetric

reference RFC XXXX (RFC Ed.: replace XXX with actual RFC number and remove this note.)

4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF access control model [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

The YANG module defined in this document can enable, disable and modify the behavior of metrics used by routing. For the security implications regarding these types of changes consult the [[RFC8500](#)] which defines the functionality.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., "config true", which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations.

These are the subtrees and data nodes and their sensitivity/vulnerability:

Under "/rt:routing/rt:control-plane-protocols/" +
"rt:control-plane-protocol/isis:isis"

- /isis-rmetric:reverse-metric/isis-rmetric:enable-receive

Under `"/rt:routing/rt:control-plane-protocols/" +`
`"rt:control-plane-protocol/isis:isis/" +`
`"isis:interfaces/isis:interface/" +`
`"isis-rmetric:reverse-metric"`

- `/isis-rmetric:metric`
- `/isis-rmetric:flags/isis-rmetric:whole-lan`
- `/isis-rmetric:flags/isis-rmetric:allow-unreachable`
- `/isis-rmetric:exclude-te-metric`

Under `"/rt:routing/rt:control-plane-protocols/" +`
`"rt:control-plane-protocol/isis:isis/" +`
`"isis:interfaces/isis:interface/" +`
`"isis:level-1/isis-rmetric:reverse-metric"`

- `/isis-rmetric:metric`
- `/isis-rmetric:flags/isis-rmetric:whole-lan`
- `/isis-rmetric:flags/isis-rmetric:allow-unreachable`
- `/isis-rmetric:exclude-te-metric`

Under `"/rt:routing/rt:control-plane-protocols/" +`
`"rt:control-plane-protocol/isis:isis/" +`
`"isis:interfaces/isis:interface/" +`
`"isis:level-2/isis-rmetric:reverse-metric"`

- `/isis-rmetric:metric`
- `/isis-rmetric:flags/isis-rmetric:whole-lan`
- `/isis-rmetric:flags/isis-rmetric:allow-unreachable`
- `/isis-rmetric:exclude-te-metric`

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via `get`, `get-config`, or `notification`) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

All nodes are under the following subtree, so that prefix will be assume for each node description.

Under `"/rt:routing/rt:control-plane-protocols/" +`
`"rt:control-plane-protocol/isis:isis/" +`
`"isis:interfaces/isis:interface/" +`
`"isis:adjacencies/isis:adjacency/" +`
`"isis-rmetric:reverse-metric"`

- `/isis-rmetric:metric`
- `/isis-rmetric:flags/isis-rmetric:whole-lan`
- `/isis-rmetric:flags/isis-rmetric:allow-unreachable`
- `/isis-rmetric:te-metric`

Appendix A. Examples

A.1. Example Enable XML

Below is an example of XML instance data to enable reverse metric processing.

```
<rt:routing
  xmlns:rt="urn:ietf:params:xml:ns:yang:ietf-routing"
  xmlns:isis="urn:ietf:params:xml:ns:yang:ietf-isis"
  xmlns:isis-rmetric=
    "urn:ietf:params:xml:ns:yang:ietf-isis-reverse-metric">
<rt:control-plane-protocols>
  <rt:control-plane-protocol>
    <rt:type>isis:isis</rt:type>
    <rt:name>default</rt:name>
    <isis:isis>
      <isis:area-address>00</isis:area-address>
      <isis-rmetric:reverse-metric>
        <isis-rmetric:enable-receive>true</isis-rmetric:enable-receive>
      </isis-rmetric:reverse-metric>
    </isis:isis>
  </rt:control-plane-protocol>
</rt:control-plane-protocols>
</rt:routing>
```

Figure 1: Example XML data to enable reverse metric processing.

A.2. Example Use XML

Below is an example of XML instance data for the `ietf-isis-reverse-metric` module.

```
<if:interfaces
  xmlns:if="urn:ietf:params:xml:ns:yang:ietf-interfaces"
  xmlns:ianaift="urn:ietf:params:xml:ns:yang:iana-if-type">
  <if:interface>
    <if:name>eth0</if:name>
    <if:type>ianaift:ethernetCsmacd</if:type>
  </if:interface>
</if:interfaces>
<rt:routing
  xmlns:rt="urn:ietf:params:xml:ns:yang:ietf-routing"
  xmlns:isis="urn:ietf:params:xml:ns:yang:ietf-isis"
  xmlns:isis-rmetric=
    "urn:ietf:params:xml:ns:yang:ietf-isis-reverse-metric">
  <rt:control-plane-protocols>
    <rt:control-plane-protocol>
      <rt:type>isis:isis</rt:type>
      <rt:name>default</rt:name>
      <isis:isis>
        <isis:area-address>00</isis:area-address>
        <isis:interfaces>
          <isis:interface>
            <isis:name>eth0</isis:name>
            <isis-rmetric:reverse-metric>
              <isis-rmetric:reverse-metric>
                <isis-rmetric:metric>
                  65535
                </isis-rmetric:metric>
              </isis-rmetric:reverse-metric>
            </isis-rmetric:reverse-metric>
          </isis:interface>
        </isis:interfaces>
      </isis:isis>
    </rt:control-plane-protocol>
  </rt:control-plane-protocols>
</rt:routing>
```

Figure 2: Example XML data for `ietf-isis-reverse-metric` module.

A.3. Example JSON

Below is an example of JSON instance data for the `ietf-isis-reverse-metric` module.

```

{
  "ietf-interfaces:interfaces": {
    "interface": [
      {
        "name": "eth0",
        "type": "iana-if-type:ethernetCsmacd"
      }
    ]
  },
  "ietf-routing:routing": {
    "control-plane-protocols": {
      "control-plane-protocol": [
        {
          "type": "ietf-isis:isis",
          "name": "default",
          "ietf-isis:isis": {
            "area-address": [
              "00"
            ],
            "interfaces": {
              "interface": [
                {
                  "name": "eth0",
                  "ietf-isis-reverse-metric:reverse-metric": {
                    "level-1": {
                      "reverse-metric": {
                        "metric": 65535,
                        "exclude-te-metric": true
                      }
                    }
                  }
                }
              ]
            }
          }
        }
      ]
    }
  }
}

```
