**Mobile IPv6 Vendor Specific Option**  
**draft-ietf-mip6-vsm-01.txt**

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on August 25, 2007.

Abstract

There is a need for vendor specific extensions to Mobility Header messages so that Mobile IPv6 vendors are able to extend the protocol for research or deployment purposes. This document defines a new vendor specific mobility option.

## **1. Introduction**

Vendor specific messages have traditionally allowed vendors to implement extensions to some protocols and distinguish themselves from other vendors. These messages are clearly marked by a Vendor ID that identifies the vendor. A particular vendor's implementation identifies the vendor extension by recognizing the Vendor ID. Implementations that do not recognize the Vendor ID either discard or skip processing the message.

Mobile IPv6 [2] is being deployed and there is a need for vendor specific extensions to Mobility Header messages so that vendors are able to extend the Mobile IPv6 protocol for research or deployment purposes.

This document defines a new mobility option, the Vendor Specific Mobility option, which can be carried in any Mobility Header message. The Vendor Specific mobility option MUST be used only with a Mobility Header message. Mobility options, by definition, can be skipped if an implementation does not recognize the mobility option type [2].

The messages defined in this document can also be used for NEMO [3] and Proxy MIPv6 [4] since these protocols also use Mobility Header messages.

Vendor specific extensions to protocols can cause serious interoperability issues if they are not used carefully. The vendor specific extensions MUST be standardized in the IETF if they are to be deployed in a large scale or if multiple vendors are involved in a particular system or deployment. Experience has shown that vendor specific extensions benefit from IETF review and standardization.

## **2. Terminology**

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [1].

## **3. Vendor Specific Mobility Option**

The Vendor Specific Mobility Option can be included in any Mobility Header message and has an alignment requirement of 4n+2. If the Mobility Header message includes a Binding Authorization Data option [2], then the Vendor Specific mobility option should appear before the Binding Authorization Data option. Multiple Vendor Specific mobility options MAY be present in a Mobility Header message.

## **6. Acknowledgements**

The author would like to thank Jari Arkko and Basavaraj Patil with whom the contents of this document were discussed first.
