This document specifies the way in which the label mapping information
for a particular route is piggybacked in the same Border Gateway
Protocol (BGP) Update message that is used to distribute the route
itself. When BGP is used to distribute a particular route, it can
be also be used to distribute a Multiprotocol Label Switching (MPLS)
label which is mapped to that route.

This document is a product of the Multiprotocol Label Switching
Working Group of the IETF.

This is now a Proposed Standard Protocol.

This document specifies an Internet standards track protocol for
the Internet community, and requests discussion and suggestions
for improvements. Please refer to the current edition of the
"Internet Official Protocol Standards" (STD 1) for the
standardization state and status of this protocol. Distribution
of this memo is unlimited.

This announcement is sent to the IETF list and the RFC-DIST list.
Requests to be added to or deleted from the IETF distribution list
should be sent to IETF-REQUEST@IETF.ORG. Requests to be
added to or deleted from the RFC-DIST distribution list should
