

**NETCONF Client and Server Models**  
**draft-ietf-netconf-netconf-client-server-18**

**Abstract**

This document defines two YANG modules, one module to configure a NETCONF client and the other module to configure a NETCONF server. Both modules support both the SSH and TLS transport protocols, and support both standard NETCONF and NETCONF Call Home connections.

**Editorial Note (To be removed by RFC Editor)**

This draft contains many placeholder values that need to be replaced with finalized values at the time of publication. This note summarizes all of the substitutions that are needed. No other RFC Editor instructions are specified elsewhere in this document.

This document contains references to other drafts in progress, both in the Normative References section, as well as in body text throughout. Please update the following references to reflect their final RFC assignments:

- o I-D.ietf-netconf-keystore
- o I-D.ietf-netconf-tcp-client-server
- o I-D.ietf-netconf-ssh-client-server
- o I-D.ietf-netconf-tls-client-server

Artwork in this document contains shorthand references to drafts in progress. Please apply the following replacements:

- o "XXXX" --> the assigned RFC value for this draft
- o "AAAA" --> the assigned RFC value for I-D.ietf-netconf-tcp-client-server
- o "YYYY" --> the assigned RFC value for I-D.ietf-netconf-ssh-client-server

- o "ZZZZ" --> the assigned RFC value for I-D.ietf-netconf-tls-client-server

Artwork in this document contains placeholder values for the date of publication of this draft. Please apply the following replacement:

- o "2020-03-08" --> the publication date of this draft

The following Appendix section is to be removed prior to publication:

- o [Appendix B.](#) Change Log

#### Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on September 9, 2020.

[Page 3]

## **1. Introduction**

This document defines two YANG [[RFC7950](#)] modules, one module to configure a NETCONF [[RFC6241](#)] client and the other module to configure a NETCONF server. Both modules support both NETCONF over SSH [[RFC6242](#)] and NETCONF over TLS [[RFC7589](#)] and NETCONF Call Home connections [[RFC8071](#)].

## **2. Terminology**

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [BCP 14](#) [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

## **3. The NETCONF Client Model**

The NETCONF client model presented in this section supports both clients initiating connections to servers, as well as clients listening for connections from servers calling home, using either the SSH and TLS transport protocols.

YANG feature statements are used to enable implementations to advertise which potentially uncommon parts of the model the NETCONF client supports.

### **3.1. Tree Diagram**

The following tree diagram [[RFC8340](#)] provides an overview of the data model for the "ietf-netconf-client" module.

This tree diagram only shows the nodes defined in this module; it does show the nodes defined by "grouping" statements used by this module.

Please see [Appendix A.1](#) for a tree diagram that illustrates what the module looks like with all the "grouping" statements expanded.

```
module: ietf-netconf-client
  +-rw netconf-client
    +--u netconf-client-app-grouping

    grouping netconf-client-grouping
    grouping netconf-client-initiate-stack-grouping
      +- (transport)
        +--:(ssh) {ssh-initiate}?
          |  +- ssh
```

+-- name? string
+---u netconf-client-listen-stack-grouping
```

### [3.2. Example Usage](#)

The following example illustrates configuring a NETCONF client to initiate connections, using both the SSH and TLS transport protocols, as well as listening for call-home connections, again using both the SSH and TLS transport protocols.

This example is consistent with the examples presented in Section 2 of [[I-D.ietf-netconf-trust-anchors](#)] and [Section 3.2](#) of [[I-D.ietf-netconf-keystore](#)].

#### **4. The NETCONF Server Model**

The NETCONF server model presented in this section supports both listening for connections as well as initiating call-home connections, using either the SSH and TLS transport protocols.

YANG feature statements are used to enable implementations to advertise which potentially uncommon parts of the model the NETCONF server supports.

##### **4.1. Tree Diagram**

The following tree diagram [[RFC8340](#)] provides an overview of the data model for the "ietf-netconf-server" module.

This tree diagram only shows the nodes defined in this module; it does show the nodes defined by "grouping" statements used by this module.

Please see [Appendix A.2](#) for a tree diagram that illustrates what the module looks like with all the "grouping" statements expanded.

```

#### [4.2. Example Usage](#)

The following example illustrates configuring a NETCONF server to listen for NETCONF client connections using both the SSH and TLS transport protocols, as well as configuring call-home to two NETCONF clients, one using SSH and the other using TLS.

This example is consistent with the examples presented in Section 2 of [[I-D.ietf-netconf-trust-anchors](#)] and [Section 3.2](#) of [[I-D.ietf-netconf-keystore](#)].

```

## 5. Security Considerations

The YANG module defined in this document uses groupings defined in [[I-D.kwatsen-netconf-tcp-client-server](#)], [[I-D.ietf-netconf-ssh-client-server](#)], and [[I-D.ietf-netconf-tls-client-server](#)]. Please see the Security Considerations section in those documents for concerns related those groupings.

The YANG modules defined in this document are designed to be accessed via YANG based management protocols, such as NETCONF [[RFC6241](#)] and RESTCONF [[RFC8040](#)]. Both of these protocols have mandatory-to-implement secure transport layers (e.g., SSH, TLS) with mutual authentication.

The NETCONF access control model (NACM) [[RFC8341](#)] provides the means to restrict access for particular users to a pre-configured subset of all available protocol operations and content.

There are a number of data nodes defined in the YANG modules that are writable/creatable/deletable (i.e., config true, which is the default). Some of these data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

None of the subtrees or data nodes in the modules defined in this document need to be protected from write operations.

Some of the readable data nodes in the YANG modules may be considered sensitive or vulnerable in some network environments. It is thus

Watson

Expires September 9, 2020

[Page 41]

important to control read access (e.g., via get, get-config, or notification) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

None of the subtrees or data nodes in the modules defined in this document need to be protected from read operations.

Some of the RPC operations in the YANG modules may be considered sensitive or vulnerable in some network environments. It is thus important to control access to these operations. These are the operations and their sensitivity/vulnerability:

The modules defined in this document do not define any 'RPC' or 'action' statements.

## **6. IANA Considerations**

### **6.1. The IETF XML Registry**

This document registers two URIs in the "ns" subregistry of the IETF XML Registry [[RFC3688](#)]. Following the format in [[RFC3688](#)], the following registrations are requested:

URI: urn:ietf:params:xml:ns:yang:ietf-netconf-client  
Registrant Contact: The NETCONF WG of the IETF.  
XML: N/A, the requested URI is an XML namespace.

URI: urn:ietf:params:xml:ns:yang:ietf-netconf-server  
Registrant Contact: The NETCONF WG of the IETF.  
XML: N/A, the requested URI is an XML namespace.

### **6.2. The YANG Module Names Registry**

This document registers two YANG modules in the YANG Module Names registry [[RFC6020](#)]. Following the format in [[RFC6020](#)], the the following registrations are requested:

```
name:          ietf-netconf-client
namespace:     urn:ietf:params:xml:ns:yang:ietf-netconf-client
prefix:        ncc
reference:    RFC XXXX

name:          ietf-netconf-server
namespace:     urn:ietf:params:xml:ns:yang:ietf-netconf-server
prefix:        ncs
reference:    RFC XXXX
```

## [Appendix A.](#) Expanded Tree Diagrams

### A.1. Expanded Tree Diagram for 'ietf-netconf-client'

The following tree diagram [[RFC8340](#)] provides an overview of the data model for the "ietf-netconf-client" module.

This tree diagram shows all the nodes defined in this module, including those defined by "grouping" statements used by this module.

Please see [Section 3.1](#) for a tree diagram that illustrates what the module looks like without all the "grouping" statements expanded.

===== NOTE: '\\\' line wrapping per BCP XXX (RFC XXXX) =====

## [A.2. Expanded Tree Diagram for 'ietf-netconf-server'](#)

The following tree diagram [[RFC8340](#)] provides an overview of the data model for the "ietf-netconf-server" module.

This tree diagram shows all the nodes defined in this module, including those defined by "grouping" statements used by this module.

Please see [Section 4.1](#) for a tree diagram that illustrates what the module looks like without all the "grouping" statements expanded.

===== NOTE: '\\\' line wrapping per BCP XXX (RFC XXXX) =====

## [Appendix B. Change Log](#)

### [B.1. 00 to 01](#)

- o Renamed "keychain" to "keystore".

### [B.2. 01 to 02](#)

- o Added to ietf-netconf-client ability to connect to a cluster of endpoints, including a reconnection-strategy.
- o Added to ietf-netconf-client the ability to configure connection-type and also keep-alive strategy.
- o Updated both modules to accommodate new groupings in the ssh/tls drafts.

### [B.3. 02 to 03](#)

- o Refined use of tls-client-grouping to add a must statement indicating that the TLS client must specify a client-certificate.
- o Changed 'netconf-client' to be a grouping (not a container).

### [B.4. 03 to 04](#)

- o Added [RFC 8174](#) to Requirements Language Section.
- o Replaced refine statement in ietf-netconf-client to add a mandatory true.

Watson

Expires September 9, 2020

[Page 94]

- o Added refine statement in ietf-netconf-server to add a must statement.
- o Now there are containers and groupings, for both the client and server models.

#### **B.5. 04 to 05**

- o Now tree diagrams reference ietf-netmod-yang-tree-diagrams
- o Updated examples to inline key and certificates (no longer a leafref to keystore)

#### **B.6. 05 to 06**

- o Fixed change log missing section issue.
- o Updated examples to match latest updates to the crypto-types, trust-anchors, and keystore drafts.
- o Reduced line length of the YANG modules to fit within 69 columns.

#### **B.7. 06 to 07**

- o Removed "idle-timeout" from "persistent" connection config.
- o Added "random-selection" for reconnection-strategy's "starts-with" enum.
- o Replaced "connection-type" choice default (persistent) with "mandatory true".
- o Reduced the periodic-connection's "idle-timeout" from 5 to 2 minutes.
- o Replaced reconnect-timeout with period/anchor-time combo.

#### **B.8. 07 to 08**

- o Modified examples to be compatible with new crypto-types algs

#### **B.9. 08 to 09**

- o Corrected use of "mandatory true" for "address" leafs.
- o Updated examples to reflect update to groupings defined in the keystore draft.

Watson

[Page 95]

- o Updated to use groupings defined in new TCP and HTTP drafts.
- o Updated copyright date, boilerplate template, affiliation, and folding algorithm.

**B.10. 09 to 10**

- o Reformatted YANG modules.

**B.11. 10 to 11**

- o Adjusted for the top-level "demux container" added to groupings imported from other modules.
- o Added "must" expressions to ensure that keepalives are not configured for "periodic" connections.
- o Updated the boilerplate text in module-level "description" statement to match copyeditor convention.
- o Moved "expanded" tree diagrams to the Appendix.

**B.12. 11 to 12**

- o Removed the "Design Considerations" section.
- o Removed the 'must' statement limiting keepalives in periodic connections.
- o Updated models and examples to reflect removal of the "demux" containers in the imported models.
- o Updated the "periodic-connection" description statements to be more like the RESTCONF draft, especially where it described dropping the underlying TCP connection.
- o Updated text to better reference where certain examples come from (e.g., which Section in which draft).
- o In the server model, commented out the "must 'pinned-ca-certs or pinned-client-certs'" statement to reflect change made in the TLS draft whereby the trust anchors MAY be defined externally.
- o Replaced the 'listen', 'initiate', and 'call-home' features with boolean expressions.

[Page 96]

**B.13. 12 to 13**

- o Updated to reflect changes in trust-anchors drafts (e.g., s/trust-anchors/truststore/g + s/pinned//)

**B.14. 13 to 14**

- o Adjusting from change in TLS client model (removing the top-level 'certificate' container), by swapping refining-in a 'mandatory true' statement with a 'must' statement outside the 'uses' statement.
- o Updated examples to reflect ietf-crypto-types change (e.g., identities --> enumerations)

**B.15. 14 to 15**

- o Refactored both the client and server modules similar to how the ietf-restconf-server module was refactored in -13 of that draft, and the ietf-restconf-client grouping.

**B.16. 15 to 16**

- o Added refinement to make "cert-to-name/fingerprint" be mandatory false.
- o Commented out refinement to "tls-server-grouping/client-authentication" until a better "must" expression is defined.

**B.17. 16 to 17**

- o Updated examples to include the "\*-key-format" nodes.
- o Updated examples to remove the "required" nodes.
- o Updated examples to remove the "client-auth-defined-elsewhere" nodes.

**B.18. 17 to 18**

- o Updated examples to reflect new "bag" addition to truststore.
