RADIUS Attributes for Multilink PPP Banwidth Allocation Control

#### 1. Status of this Memo

This document is an Internet-Draft. Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as ``work in progress''.

To learn the current status of any Internet-Draft, please check the ``lid-abstracts.txt'' listing contained in the Internet-Drafts Shadow Directories on ds.internic.net (US East Coast), nic.nordu.net (Europe), ftp.isi.edu (US West Coast), or munnari.oz.au (Pacific Rim).

This memo provides information for the Internet community. This memo does not specify an Internet standard of any kind. The distribution of this memo is unlimited. It is filed as <<u>draft-ietf-radius-ms-ba-attr-01.txt></u> and expires August 20, 1998. Please send comments to the RADIUS Working Group mailing list (ietf-radius@livingston.com) or to the author (glennz@microsoft.com).

### 2. Abstract

This document describes a set of vendor-specific RADIUS attributes designed to support the dynamic control of bandwidth allocation in multilink PPP [1]. Attributes are defined that specify whether use of the PPP Bandwidth Allocation Protocol [2] is allowed or required on incoming calls, the level of line capacity (expressed as a percentage) below which utilization must fall before a link is eligible to be dropped, and the length of time (in seconds) that a link must be underutilized before it is dropped.

### 3. Specification of Requirements

In this document, the key words "MAY", "MUST, "MUST NOT", "optional", "recommended", "SHOULD", and "SHOULD NOT" are to be interpreted as described in [3].

#### 4. Attributes

The following sections describe sub-attributes which may be transmitted in one or more RADIUS attributes of type Vendor-Specific [4]. More than one sub-attribute MAY be transmitted in a single Vendor-Specific Attribute; if this is done, the sub-attributes SHOULD be packed as a sequence of Vendor-Type/Vendor-Length/Value triples following the inital Type, Length and Vendor-ID fields. The Length field of the Vendor-Specific Attribute MUST be set equal to the sum of the Vendor-Length fields of the sub-attributes contained in the Vendor-Specific Attribute, plus six. The Vendor-ID field of the Vendor-Specific Attribute(s) MUST be set to decimal 311 (Microsoft).

#### 4.1. MS-BAP-Usage

Description

This Attribute describes whether the use of BAP is allowed, disallowed or required on new multilink calls. It MAY be used in Access-Accept packets.

A summary of the MS-BAP-Usage Attribute format is shown below. The fields are transmitted from left to right.

#### 4.2. MS-Link-Utilization-Threshold

Description

This Attribute represents the percentage of available bandwidth utilization below which the link must fall before the link is eligible for termination. Permissible values for the MS-Link-Utilization-Threshold Attribute are in the range 1-100, inclusive. It is only used in Access-Accept packets.

A summary of the MS-Link-Utilization-Threshold Attribute format is shown below. The fields are transmitted from left to right.

Value

The Value field represents the number of seconds that a link must be underutilized (i.e., display bandwidth utilization below the threshold specified in the MS-Link-Utilization-Threshold Attribute) before the link is dropped.

### 5. Table of Attributes

The following table provides a guide to which of the above attributes may be found in which kinds of packets, and in what quantity.

	Request	Accept	Reject	Challenge	Acct-Request	#	Attribute
	0	0-1	0	0	0	13	MS-BAP-Usage
	0	0-1	0	0	0	14	MS-Link-Utilization-
Threshold							
	0	0-1	0	0	0	15	MS-Link-Drop-Time-Limit

The following table defines the meaning of the above table entries.

- O This attribute MUST NOT be present in packet.
- 0+ Zero or more instances of this attribute MAY be present in packet.
- 0-1 Zero or one instance of this attribute MAY be present in packet.

# **6**. Security Considerations

None.
