Workgroup: RIFT Internet-Draft: draft-ietf-rift-kv-registry-01 Published: 24 June 2022 Intended Status: Standards Track Expires: 26 December 2022 Authors: J. Head, Ed. T. Przygienda Juniper Networks Juniper Networks RIFT Key/Value Structure and Registry

## Abstract

The Routing in Fat-Trees <u>RIFT</u> [<u>RIFT</u>] protocol allows for key/value pairs to be advertised within Key-Value Topology Information Elements (KV-TIEs). The data contained within these KV-TIEs can be used for any imaginable purpose. This document defines the various Key-Types (i.e. Well-Known, OUI, and Experimental) and a method to structure corresponding values.

#### **Requirements Language**

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in <u>RFC 2119</u> [<u>RFC2119</u>].

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <u>https://datatracker.ietf.org/drafts/current/</u>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 26 December 2022.

Authors' Addresses

# 1. Description

The Routing in Fat-Trees <u>RIFT</u> [<u>RIFT</u>] protocol allows for key/value pairs to be advertised within Key-Value Topology Information Elements (KV-TIEs). There are no restrictions placed on the type of data that is contained in KV-TIEs nor what the data is used for.

For example, it might be beneficial to advertise overlay protocol state from leaf nodes to the Top-of-Fabric (ToF) nodes. This would make it possible to view critical state of a fabric-wide service from a single ToF node rather than retrieving and reconciling the same state from multiple leaf nodes.

2. Key Structure

This section describes the generic Key structure and semantics, <u>Figure 1</u> further illustrates these components.

0										1										2										3	
0	1 3	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1

Figure 1: Generic Key-Value Structure

#### where:

#### Key-Type:

A 1-byte value that identifies the Key-Type. It MUST be a reserved value from the RIFT Key-Type Registry that is defined later in this document.

The range of valid values is  $1 - 255 (2^8-1)$ .

0 is an illegal value and MUST NOT be allocated to or used by any implementation. It MUST be ignored on receipt.

#### Key Identifier:

A 3-byte value that identifies the specific key and describes the structure of the contained values.

The range of valid values is 1 - 16777215 (2^24-1).

0 is an illegal value and MUST NOT be allocated to or used by any implementation. It MUST be ignored on receipt.

#### Values:

A variable length value that contains data associated with the Key Identifier. It SHOULD contain 1 or more elements. Whether the collection of elements allows duplicates and/or is ordered is governed by the particular Key Identifier's specification.

#### 2.1. Experimental Key-Type

This section reserves a value in the RIFT Key-Type Registry to indicate an Experimental Key-Type.

As shown in <u>Figure 2</u>, the Key-Type will be used to identify the Key-Type as Experimental. The Key Identifier will be used to identify the specific key and describe the structure of the contained values.

0									1										2										3	
0	1 2	2 3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1

+-+	+-																													

Figure 2: Experimental Key-Type

# 2.2. Well-Known Key-Type

This section reserves a value in the RIFT Key-Type Registry to indicate Well-Known Key-Types that all implementations SHOULD support.

As shown in <u>Figure 3</u>, the Key-Type will be used to identify the Key-Type as Well-Known. The Key Identifier will be used to identify the specific key and describe the structure of the contained values.

Θ						1										2										3	
0 1	234	5	6	7	89	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1

					We	11	-Kr	nov	٧n	Vá	alı	les	5 (	(va	ari	Lab	ole	e)									
+-+	+-																										

Figure 3: Well-Known Key-Type

# 2.3. OUI Key-Type

This section reserves a value in the RIFT Key-Type Registry to indicate an OUI (vendor-specific) Key-Type that any implementation MAY support.

As shown in Figure 4, the Key-Type will be used to identify the Key-Type as OUI. The Key Identifier MUST use the implementing organization's reserved OUI space to indicate the key and value structure.

0		1		2	3					
0	12345	67890123	4 5 6 7 8 9	012345	5678901

Ι		Vendor Speci	fic Values (	variable)						
+-+	+-									

Figure 4: OUI Key-Type

## 3. Operational Considerations

While no restrictions are placed on Key-Value data or what it is used for, it is RECOMMENDED that a serialized Thrift model be used for simpler interoperability. [<u>RIFT-AUTO-EVPN</u>] is an example of this type of implementation.

Key-Value elements SHOULD NOT be used to carry topology information used by RIFT itself to perform distributed computations.

In cases where KV-TIEs are flooded from north to south, policies SHOULD be implemented in order to avoid network-wide flooding.

For networks with more than one ToF node, it is RECOMMENDED that those ToF nodes contain identical KV-TIE information when being distributed from north to south. <u>RIFT</u> [<u>RIFT</u>] requires that only one KV-TIE is selected when identical keys are received from multiple northbound neighbors. If this is not considered then the tiebreaking rules may cause a node to select a suboptimal KV-TIE. Consider a case where failure conditions cause the ToF nodes to become split-brained. While the Key-Type and Key Identifier will be identical, the value(s) contained within may differ. The node(s) receiving these differing KV-TIEs will select the one from the ToF node with the highest System ID, potentially leading to unintended effects.

## 4. IANA Considerations

This section requests that IANA create two new registries the "RIFT Key-Type" and "RIFT Well-Known Key-Type" registries in accordance with [<u>RFC8126</u>].

Experts reviewing requests for new values to either registry MUST consider the items in the <u>Expert Review Guidance</u> (<u>Section 4.3</u>) section.

The following sections detail each registry's requirements and suggested values.

## 4.1. RIFT Key-Type Registry

This section requests that IANA create and help govern the following registry:

**Registry Name:** RIFT Key-Type Registry

## **Registration Procedures:**

Expert Review

## **Description:**

Key-Type registry for the RIFT protocol.

#### **Reference:**

This document.

## 4.1.1. RIFT Key-Type Registry Requested Entries

This section requests that IANA register the following suggested values to the "RIFT Key-Type Registry".

Value	Кеу-Туре	Description	Status/ Reference
Θ	Illegal	Not allowed.	This document
1	Experimental	Indicates that the Key-Type is Experimental.	This document.
2	Well-Known	Indicates that the Key-Type is Well-Known.	This document.
3	OUI	Indicates that the Key-Type is OUI (vendor specific).	This document.

Table 1

# 4.2. RIFT Well-Known Key-Type Registry

This section requests that IANA create and help govern the following registry:

# Registry Name:

RIFT Well-Known Key-Type Registry

# **Registration Procedures:**

Expert Review

# Description:

Well-Known Key-Type (2) registry for the RIFT protocol.

# Reference:

This document.

## 4.2.1. RIFT Well-Known Key-Type Registry Requested Entries

This section requests that IANA register the following suggested values to the "RIFT Well-Known Key-Type Registry".

Value	Key-Identifier	Description	Status/ Reference
Θ	Illegal	Not allowed.	This document.
1	MAC/IP Binding	To be defined.	To be defined.
2	FAM Security Roll-Over Key	To be defined.	To be defined.

Table 2

#### 4.3. Expert Review Guidance

Experts reviewing requests for values from the RIFT Key-Type Registry or the the Well-Known RIFT Key-Type Registry are responsible for the following:

1. Determining the existence of a specification that clearly defines the purpose supporting the request and MUST contain all required fields for given registry.

The document MUST also be permenent and publically available.

- 2. Ensuring that any requests are made available to the RIFT working group for review should the work originate from outside of the RIFT Working Group.
- 3. Ensuring that any work produce outside of the IETF does not conflict with any work that is already published or actively pursuing being published.

## 5. Security Considerations

This document introduces no new security concerns to RIFT or other specifications referenced in this document given that the Key-Value TIEs are already extensively secured by the <u>RIFT</u> [<u>RIFT</u>] protocol specification itself.

#### 6. Acknowledgements

To be provided.
