Internet-Draft   P. Sarda
Intended status: Standards Track   Ericsson
Expires: January 18, 2017   V. Choudhary
                                                   Huawei Technologies
                                                        July 18, 2016

            A YANG Data Model for Routing Information Protocol (RIP)
                     draft-ietf-rtgwg-yang-rip-02.txt

Abstract

   This document describes a data model for the Routing Information
   Protocol (RIP). Both RIP version 2 and RIPng are covered.

Status of this Memo

   This Internet-Draft is submitted in full conformance with the
   provisions of [BCP 78](BCP 78) and [BCP 79](BCP 79).

   Internet-Drafts are working documents of the Internet Engineering
   Task Force (IETF), its areas, and its working groups. Note that
   other groups may also distribute working documents as Internet-
   Drafts.

   Internet-Drafts are draft documents valid for a maximum of six months
   and may be updated, replaced, or obsoleted by other documents at any
   time. It is inappropriate to use Internet-Drafts as reference
   material or to cite them other than as "work in progress."

   The list of current Internet-Drafts can be accessed at
   http://www.ietf.org/ietf/1id-abstracts.txt

   The list of Internet-Draft Shadow Directories can be accessed at
   http://www.ietf.org/shadow.html

   This Internet-Draft will expire on January 18, 2017.

Table of Contents

1. Introduction

   This document introduces a YANG [RFC6020] data model for the Routing
   Information Protocol (RIP)[RFC2453][RFC2080]. RIP was designed to
   work as an Interior Gateway Protocol (IGP) in moderate-size
   Autonomous Systems (AS).

   This YANG model supports both RIP version 2 and RIPng. RIP version 2
   (defined in [RFC2453]) supports IPv4. RIPng (defined in [RFC2080])
   supports IPv6.

1.1. Terminology

   The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT",
   "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and
   "OPTIONAL" in this document are to be interpreted as described in BCP
   14, [RFC2119].

   The following terms are defined in [RFC6020] and are not redefined
   here:

o augment

        o data model

---

        o data node

[1.2](1.2). Tree Diagrams

   A simplified graphical representation of the data model is used in
   this document. The meaning of the symbols in these diagrams is as
   follows:

      o Brackets "[" and "]" enclose list keys.

      o Curly braces "{" and "}" contain names of optional features
         that make the corresponding node conditional.

      o Abbreviations before data node names: "rw" means configuration
         (read-write), and "ro" means state data (read-only).

      o Symbols after data node names: "?" means an optional node, "!"
         means a presence container, and "*" denotes a list and leaf-
         list.

      o Parentheses enclose choice and case nodes, and case nodes are
         also marked with a colon (":").

      o Ellipsis ("...") stands for contents of subtrees that are not
         shown.

[2](2). RIP YANG model overview

   This document defines the YANG module "ietf-rip", which has the
   following structure:

   module: ietf-rip
   augment /rt:routing/rt:control-plane-protocols/rt:control-plane-
   protocol:
      +--rw rip
         +--rw originate-default-route!
         | +--rw route-policy?   route-policy-ref
         +--rw default-metric?   uint8

```
            +--rw distance?                      uint8
            +--rw triggered-update-threshold?    uint8
            +--rw maximum-paths?                 uint8
            +--rw output-delay?                  uint8
            +--rw distribute-list* [prefix-set-name direction]
            |  +--rw prefix-set-name    prefix-set-ref
            |  +--rw direction          enumeration
```

```
            |  +--rw if-name?           if:interface-ref
            +--rw redistribute
            |  +--rw bgp* [asn]
            |  |  +--rw asn              inet:as-number
            |  |  +--rw metric?          uint8
            |  |  +--rw route-policy?    route-policy-ref

4. IANA Considerations

   RFC Ed.: In this section, replace all occurrences of 'XXXX' with the
   actual RFC number (and remove this note).

   This document registers the following namespace URIs in the IETF XML
   registry [RFC3688]:

```
   ------------------------------------------------------------------
   name:         ietf-rip
   namespace:    urn:ietf:params:xml:ns:yang:ietf-rip
   prefix:       rip
   reference:    RFC XXXX
   ------------------------------------------------------------------
```

5. Security Considerations

The configuration, state, and action data defined in this document
are designed to be accessed via the NETCONF protocol [RFC6241]. The
data-model by itself does not create any security implications. The
security considerations for the NETCONF protocol are applicable. The
NETCONF protocol used for sending the data supports authentication
and encryption.
