SSH Protocol Assigned Numbers
draft-ietf-secsh-assignednumbers-00.txt

Status of this Memo

This document is an Internet-Draft and is in full conformance with all provisions of [Section 10 of RFC2026](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on October 30, 2002.

Abstract

This document defines the initial state of the IANA assigned numbers for the SSH protocol as defined in [[SSH-ARCH](#)], [[SSH-TRANS](#)], [[SSH-CONNECT](#)], [[SSH-USERAUTH](#)]. This document does not define any new protocols or any number ranges not already defined in the above referenced documents. It is intended only for initialization of the IANA databases referenced in those documents.

1. Message Numbers

The Message Number is an 8-bit value, which describes the payload of a packet.

Protocol packets have message numbers in the range 1 to 255. These numbers have been allocated as follows in [[SSH-ARCH](#)]:

Transport layer protocol:

1 to 19	Transport layer generic (e.g. disconnect, ignore, debug, etc.)
20 to 29	Algorithm negotiation
30 to 49	Key exchange method specific (numbers can be reused for different authentication methods)

User authentication protocol:

50 to 59	User authentication generic
60 to 79	User authentication method specific (numbers can be reused for different authentication methods)

Connection protocol:

80 to 89	Connection protocol generic
90 to 127	Channel related messages

Reserved for client protocols:

128 to 191 Reserved

Local extensions:

192 to 255 Local extensions

Requests for assignments of new message numbers must be accompanied by an RFC which describes the new packet type. If the RFC is not on the standards-track (i.e. it is an informational or experimental RFC), it must be explicitly reviewed and approved by the IESG before the RFC is published and the message number is assigned.

1.1 Disconnect Codes

The Disconnect code is an 8-bit value, which describes the disconnect reason. Requests for assignments of new disconnect codes must be accompanied by an RFC which describes the new disconnect reason code.

Disconnect code	Value	Reference
-----	-----	-----
SSH_DISCONNECT_HOST_NOT_ALLOWED_TO_CONNECT	1	[SSH-TRANS]
SSH_DISCONNECT_PROTOCOL_ERROR	2	[SSH-TRANS]

SSH_DISCONNECT_BY_APPLICATION	11	[SSH-TRANS]
SSH_DISCONNECT_TOO_MANY_CONNECTIONS	12	[SSH-TRANS]
SSH_DISCONNECT_AUTH_CANCELLED_BY_USER	13	[SSH-TRANS]

SSH_DISCONNECT_NO_MORE_AUTH_METHODS_AVAILABLE	14	[SSH-TRANS]
SSH_DISCONNECT_ILLEGAL_USER_NAME	15	[SSH-TRANS]

2. Service Names

The Service Name is used to describe a protocol layer. These names MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ('@'), comma (','), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

Requests for assignments of new service names must be accompanied by an RFC which describes the interpretation for the service name. If the RFC is not on the standards-track (i.e. it is an informational or experimental RFC), it must be explicitly reviewed and approved by the IESG before the RFC is published and the service name is assigned.

-----	-----
ssh-userauth	[SSH-USERAUTH]
ssh-connection	[SSH-CONNECT]

2.1 Authentication Method Names

The Authentication Method Name is used to describe an authentication method for the "ssh-userauth" service [\[SSH-USERAUTH\]](#). These names MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ('@'), comma (','), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

Requests for assignments of new authentication method names must be accompanied by an RFC which describes the interpretation for the authentication method.

Method name	Reference
-----	-----
publickey	[SSH-USERAUTH, Section 4]
password	[SSH-USERAUTH, Section 5]
hostbased	[SSH-USERAUTH, Section 6]
none	[SSH-USERAUTH, Section 2.3]

2.2 Connection Protocol Assigned Names

The following request and type names MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ('@'), comma (','), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

Requests for assignments of new assigned names must be accompanied by an RFC which describes the interpretation for the type or request.

2.2.1 Connection Protocol Channel Types

exit-signal	[SSH-CONNECT, Section 4.10]

3. Key Exchange Method Names

The Key Exchange Method Name describes a key-exchange method for the protocol [[SSH-TRANS](#)]. The names MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ('@'), comma (','), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

Requests for assignment of new key-exchange method names must be accompanied by a reference to a standards-track or Informational RFC which describes this method.

4. Assigned Algorithm Names

The following identifiers (names) MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ('@'), comma (','), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

Requests for assignment of new algorithm names must be accompanied by a reference to a standards-track or Informational RFC or a reference to published cryptographic literature which describes the algorithm.
