SSH Protocol Assigned Numbers
draft-ietf-secsh-assignednumbers-07.txt

Status of this Memo

This document is an Internet-Draft and is subject to all provisions of [section 3 of RFC 3667](#). By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she become aware will be disclosed, in accordance with [RFC 3668](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on April 24, 2005.

Abstract

This document defines the instructions to the IANA and the initial state of the IANA assigned numbers for the SSH protocol. It is intended only for the initialization of the IANA registries referenced in the documents.

[1.](#) Editor's Note

The references in this document are statically defined. However, the locations of the referenced materials are dynamic and are changing with the whims of the Working Group. Please do not comment to the editor or the Working Group about inaccuracies along those lines in this document at this time. (This paragraph will be removed before this document is submitted to the RFC Editor.)

[2.](#) Introduction

This document does not define any new protocols. It is intended only to create the initial state of the IANA databases for the SSH protocol and also contains instructions for future assignments. Except for one HISTORIC algorithm generally regarded as obsolete, this document does not define any new protocols or any number ranges not already defined in: [[SSH-ARCH](#)], [[SSH-TRANS](#)], [[SSH-USERAUTH](#)], [[SSH-CONNECT](#)].

[3.](#) Conventions Used in This Document

The keywords "MUST", "MUST NOT", "REQUIRED", "SHOULD", "SHOULD NOT", and "MAY" that appear in this document are to be interpreted as described in [[RFC2119](#)].

The keywords "PRIVATE USE", "HIERARCHICAL ALLOCATION", "FIRST COME FIRST SERVED", "EXPERT REVIEW", "SPECIFICATION REQUIRED", "IESG APPROVAL", "IETF CONSENSUS", and "STANDARDS ACTION" that appear in this document when used to describe namespace allocation are to be interpreted as described in [[RFC2434](#)]. These designations are repeated in this document for clarity.

PRIVATE USE - For private or local use only, with the type and purpose defined by the local site. No attempt is made to prevent multiple sites from using the same value in different (and

incompatible) ways. There is no need for IANA to review such assignments and assignments are not generally useful for interoperability.

HIERARCHICAL ALLOCATION - Delegated managers can assign values provided they have been given control over that part of the name space. IANA controls the higher levels of the namespace according to one of the other policies.

FIRST COME FIRST SERVED - Anyone can obtain an assigned number, so long as they provide a point of contact and a brief description of what the value would be used for. For numbers, the exact value is generally assigned by the IANA; with names, specific names are

Lonvick

Expires April 24, 2005

[Page 3]

Internet-Draft

SSH Protocol Assigned Numbers

October 2004

usually requested.

EXPERT REVIEW - approval by a Designated Expert is required.

SPECIFICATION REQUIRED - Values and their meaning must be documented in an RFC or other permanent and readily available reference, in sufficient detail so that interoperability between independent implementations is possible.

IESG APPROVAL - New assignments must be approved by the IESG, but there is no requirement that the request be documented in an RFC (though the IESG has discretion to request documents or other supporting materials on a case-by-case basis).

IETF CONSENSUS - New values are assigned through the IETF consensus process. Specifically, new assignments are made via RFCs approved by the IESG. Typically, the IESG will seek input on prospective assignments from appropriate persons (e.g., a relevant Working Group if one exists).

STANDARDS ACTION - Values are assigned only for Standards Track RFCs approved by the IESG.

[4.](#) IANA Considerations

This entire document is the IANA considerations for the SSH protocol as is defined in [[SSH-ARCH](#)], [[SSH-TRANS](#)], [[SSH-USERAUTH](#)], [[SSH-CONNECT](#)]. This section contains conventions used in naming the

namespaces, the initial state of the registry, and instructions for future assignments.

[4.1](#) Message Numbers

The Message Number is an 8-bit value, which describes the payload of a packet.

[4.1.1](#) Conventions

Protocol packets have message numbers in the range 1 to 255. These numbers are allocated as follows:

Transport layer protocol:

- 1 to 19 Transport layer generic (e.g. disconnect, ignore, debug, etc.)
- 20 to 29 Algorithm negotiation
- 30 to 49 Key exchange method specific (numbers can be reused

for different authentication methods)

User authentication protocol:

- 50 to 59 User authentication generic
- 60 to 79 User authentication method specific (numbers can be reused for different authentication methods)

Connection protocol:

- 80 to 89 Connection protocol generic
- 90 to 127 Channel related messages

Reserved for client protocols:

- 128 to 191 Reserved

Local extensions:

- 192 to 255 Local extensions

4.1.2 Initial Assignments

| Message ID ----- | Value ----- | Reference ----- |
|-----------------------------------|----------------|----------------------------------|
| SSH_MSG_DISCONNECT | 1 | [SSH-TRANS] |
| SSH_MSG_IGNORE | 2 | [SSH-TRANS] |
| SSH_MSG_UNIMPLEMENTED | 3 | [SSH-TRANS] |
| SSH_MSG_DEBUG | 4 | [SSH-TRANS] |
| SSH_MSG_SERVICE_REQUEST | 5 | [SSH-TRANS] |
| SSH_MSG_SERVICE_ACCEPT | 6 | [SSH-TRANS] |
| SSH_MSG_KEXINIT | 20 | [SSH-TRANS] |
| SSH_MSG_NEWKEYS | 21 | [SSH-TRANS] |
| SSH_MSG_KEXDH_INIT | 30 | [SSH-TRANS] |
| SSH_MSG_KEXDH_REPLY | 31 | [SSH-TRANS] |
| SSH_MSG_USERAUTH_REQUEST | 50 | [SSH-USERAUTH] |
| SSH_MSG_USERAUTH_FAILURE | 51 | [SSH-USERAUTH] |
| SSH_MSG_USERAUTH_SUCCESS | 52 | [SSH-USERAUTH] |
| SSH_MSG_USERAUTH_BANNER | 53 | [SSH-USERAUTH] |
| SSH_MSG_USERAUTH_PK_OK | 60 | [SSH-USERAUTH] |
| SSH_MSG_GLOBAL_REQUEST | 80 | [SSH-CONNECT] |
| SSH_MSG_REQUEST_SUCCESS | 81 | [SSH-CONNECT] |
| SSH_MSG_REQUEST_FAILURE | 82 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_OPEN | 90 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_OPEN_CONFIRMATION | 91 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_OPEN_FAILURE | 92 | [SSH-CONNECT] |

| | | |
|-------------------------------|-----|---------------------------------|
| SSH_MSG_CHANNEL_WINDOW_ADJUST | 93 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_DATA | 94 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_EXTENDED_DATA | 95 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_EOF | 96 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_CLOSE | 97 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_REQUEST | 98 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_SUCCESS | 99 | [SSH-CONNECT] |
| SSH_MSG_CHANNEL_FAILURE | 100 | [SSH-CONNECT] |

4.1.3 Future Assignments

Requests for assignments of new message numbers in the range of 1 to 127 MUST be done through the STANDARDS ACTION method as described in

[RFC2434].

Requests for assignments of new message numbers in the range of 128 to 191 MUST be done through the IETF CONSENSUS method as described in [RFC2434].

The IANA will not control the message numbers range of 192 through 255. This range will be left for PRIVATE USE.

4.2 Disconnection Messages Reason Codes and Descriptions

The Disconnection Message 'reason code' is a uint32 value. The associated Disconnection Message 'description string' is a human-readable message which describes the disconnect reason.

4.2.1 Conventions

Protocol packets containing the SSH_MSG_DISCONNECT message MUST have Disconnection Message 'reason code' values in the range of 0x00000001 to 0xFFFFFFFF.

4.2.2 Initial Assignments

| description string | reason code | Reference |
|-----------------------------------------------|-------------|-------------|
| ----- | ---- | ----- |
| SSH_DISCONNECT_HOST_NOT_ALLOWED_TO_CONNECT | 1 | [SSH-TRANS] |
| SSH_DISCONNECT_PROTOCOL_ERROR | 2 | [SSH-TRANS] |
| SSH_DISCONNECT_KEY_EXCHANGE_FAILED | 3 | [SSH-TRANS] |
| SSH_DISCONNECT_RESERVED | 4 | [SSH-TRANS] |
| SSH_DISCONNECT_MAC_ERROR | 5 | [SSH-TRANS] |
| SSH_DISCONNECT_COMPRESSION_ERROR | 6 | [SSH-TRANS] |
| SSH_DISCONNECT_SERVICE_NOT_AVAILABLE | 7 | [SSH-TRANS] |
| SSH_DISCONNECT_PROTOCOL_VERSION_NOT_SUPPORTED | 8 | [SSH-TRANS] |

| | | |
|-----------------------------------------------|----|-------------|
| SSH_DISCONNECT_HOST_KEY_NOT_VERIFIABLE | 9 | [SSH-TRANS] |
| SSH_DISCONNECT_CONNECTION_LOST | 10 | [SSH-TRANS] |
| SSH_DISCONNECT_BY_APPLICATION | 11 | [SSH-TRANS] |
| SSH_DISCONNECT_TOO_MANY_CONNECTIONS | 12 | [SSH-TRANS] |
| SSH_DISCONNECT_AUTH_CANCELLED_BY_USER | 13 | [SSH-TRANS] |
| SSH_DISCONNECT_NO_MORE_AUTH_METHODS_AVAILABLE | 14 | [SSH-TRANS] |
| SSH_DISCONNECT_ILLEGAL_USER_NAME | 15 | [SSH-TRANS] |

[4.2.3](#) Future Assignments

Disconnection Message 'reason code' values MUST be assigned sequentially. Requests for assignments of new Disconnection Message 'reason codes', and their associated Disconnection Message 'description string', in the range of 0x00000010 through 0xFFFFFFFFE9 MUST be done through the IETF CONSENSUS method as described in [[RFC2434](#)]. The IANA will not assign Disconnection Message 'reason codes' in the range of 0xFFFFFFFF0 through 0xFFFFFFFF. Disconnection Message 'reason code' values in that range are left for PRIVATE USE as described in [[RFC2434](#)].

[4.3](#) Channel Connection Failure Reason Codes and Descriptions

The Channel Connection Failure 'reason code' is a uint32 value. The associated Channel Connection Failure 'description string' is a human-readable message which describes the channel connection failure reason.

[4.3.1](#) Conventions

Protocol packets containing the SSH_MSG_CHANNEL_OPEN_FAILURE message MUST have Channel Connection Failure 'reason code' values in the range of 0x00000001 to 0xFFFFFFFF.

[4.3.2](#) Initial Assignments

| description string | reason code | Reference |
|--------------------------------------|-------------|---------------------------------|
| ----- | ----- | ----- |
| SSH_OPEN_ADMINISTRATIVELY_PROHIBITED | 1 | [SSH-CONNECT] |
| SSH_OPEN_CONNECT_FAILED | 2 | [SSH-CONNECT] |
| SSH_OPEN_UNKNOWN_CHANNEL_TYPE | 3 | [SSH-CONNECT] |
| SSH_OPEN_RESOURCE_SHORTAGE | 4 | [SSH-CONNECT] |

[4.3.3](#) Future Assignments

Channel Connection Failure 'reason code' values MUST be assigned

sequentially. Requests for assignments of new Channel Connection Failure 'reason code' values, and their associated Channel Connection Failure 'description string', in the range of 0x00000005 to 0xFFFFFFFFE9 MUST be done through the IETF CONSENSUS method as described in [RFC2434]. The IANA will not assign Channel Connection Failure 'reason code' values in the range of 0xFFFFFFFF0 to 0xFFFFFFFF. Channel Connection Failure 'reason code' values in that range are left for PRIVATE USE as described in [RFC2434].

[4.4](#) Extended Channel Data Transfer data_type_code and Data

The Extended Channel Data Transfer 'data_type_code' is an uint23 value. The associated Extended Channel Data Transfer 'data' is a human-readable message which describes the type of data allowed to be transferred in the channel.

[4.4.1](#) Conventions

Protocol packets containing the SSH_MSG_CHANNEL_EXTENDED_DATA message MUST have Extended Channel Data Transfer 'data_type_code' values in the range of 0x00000001 to 0xFFFFFFFF.

[4.4.2](#) Initial Assignments

| data | data_type_code | Reference |
|--------------------------|----------------|---------------------------------|
| ---- | ----- | ----- |
| SSH_EXTENDED_DATA_STDERR | 1 | [SSH-CONNECT] |

[4.4.3](#) Future Assignments

Extended Channel Data Transfer 'data_type_code' values MUST be assigned sequentially. Requests for assignments of new Extended Channel Data Transfer 'data_type_code' values, and their associated Extended Channel Data Transfer 'data' strings, in the range of 0x00000002 to 0xFFFFFFFFE9 MUST be done through the IETF CONSENSUS method as described in [RFC2434]. The IANA will not assign Extended Channel Data Transfer 'data_type_code' values in the range of 0xFFFFFFFF0 to 0xFFFFFFFF. Extended Channel Data Transfer 'data_type_code' values in that range are left for PRIVATE USE as described in [RFC2434].

[4.5](#) Pseudo-Terminal Encoded Terminal Modes

SSH_MSG_CHANNEL_REQUEST messages with a "pty-req" string MUST contain "encoded terminal modes". These "encoded terminal modes" are opcode-argument pairs consisting of an opcode and an argument.

Internet-Draft

SSH Protocol Assigned Numbers

October 2004

[4.5.1](#) Conventions

Protocol packets containing the SSH_MSG_CHANNEL_REQUEST message with a "pty-req" string MUST contain "encoded terminal modes" with an opcode of 1 byte. The opcode values are in the range of 1 to 255. Opcodes 1 to 159 have a single uint32 argument. Opcodes 160 to 255 are not yet defined.

[4.5.2](#) Initial Assignments

| opcode | argument | description |
|--------|------------|---------------------------------------------------------------------------------------------------------------------------------|
| ----- | ----- | ----- |
| 0 | TTY_OP_END | Indicates end of options. |
| 1 | VINTR | Interrupt character; 255 if none. Similarly for the other characters. Not all of these characters are supported on all systems. |
| 2 | VQUIT | The quit character (sends SIGQUIT signal on POSIX systems). |
| 3 | VERASE | Erase the character to left of the cursor. |
| 4 | VKILL | Kill the current input line. |
| 5 | VEOF | End-of-file character (sends EOF from the terminal). |
| 6 | VEOL | End-of-line character in addition to carriage return and/or linefeed. |
| 7 | VEOL2 | Additional end-of-line character. |
| 8 | VSTART | Continues paused output (normally control-Q). |
| 9 | VSTOP | Pauses output (normally control-S). |
| 10 | VSUSP | Suspends the current program. |
| 11 | VDSUSP | Another suspend character. |
| 12 | VREPRINT | Reprints the current input line. |
| 13 | VWERASE | Erases a word left of cursor. |
| 14 | VLNEXT | Enter the next character typed literally, even if it is a special character |
| 15 | VFLUSH | Character to flush output. |
| 16 | VSWTCH | Switch to a different shell layer. |
| 17 | VSTATUS | Prints system status line (load, command, pid, etc). |
| 18 | VDISCARD | Toggles the flushing of terminal output. |
| 30 | IGNPAR | The ignore parity flag. The parameter SHOULD be 0 if this flag is FALSE set, and 1 if it is TRUE. |
| 31 | PARMRK | Mark parity and framing errors. |

| | | |
|----|--------|-----------------------------------|
| 32 | INPCK | Enable checking of parity errors. |
| 33 | ISTRIP | Strip 8th bit off characters. |
| 34 | INLCR | Map NL into CR on input. |
| 35 | IGNCR | Ignore CR on input. |
| 36 | ICRNL | Map CR to NL on input. |

| | | |
|----|---------|----------------------------------------------------------------------------------------------------|
| 37 | IUCLC | Translate uppercase characters to lowercase. |
| 38 | IXON | Enable output flow control. |
| 39 | IXANY | Any char will restart after stop. |
| 40 | IXOFF | Enable input flow control. |
| 41 | IMAXBEL | Ring bell on input queue full. |
| 50 | ISIG | Enable signals INTR, QUIT, [D]SUSP. |
| 51 | ICANON | Canonicalize input lines. |
| 52 | XCASE | Enable input and output of uppercase characters by preceding their lowercase equivalents with "\". |
| 53 | ECHO | Enable echoing. |
| 54 | ECHOE | Visually erase chars. |
| 55 | ECHOK | Kill character discards current line. |
| 56 | ECHONL | Echo NL even if ECHO is off. |
| 57 | NOFLSH | Don't flush after interrupt. |
| 58 | TOSTOP | Stop background jobs from output. |
| 59 | IEXTEN | Enable extensions. |
| 60 | ECHOCTL | Echo control characters as ^(Char). |
| 61 | ECHOKE | Visual erase for line kill. |
| 62 | PENDIN | Retype pending input. |
| 70 | OPOST | Enable output processing. |
| 71 | OLCUC | Convert lowercase to uppercase. |
| 72 | ONLCR | Map NL to CR-NL. |
| 73 | OCRNL | Translate carriage return to newline (output). |
| 74 | ONOCR | Translate newline to carriage return-newline (output). |
| 75 | ONLRET | Newline performs a carriage return (output). |
| 90 | CS7 | 7 bit mode. |
| 91 | CS8 | 8 bit mode. |
| 92 | PARENB | Parity enable. |
| 93 | PARODD | Odd parity, else even. |

128 TTY_OP_ISPEED Specifies the input baud rate in

bits per second.
129 TTY_OP_OSPEED Specifies the output baud rate in
bits per second.

[4.5.3](#) Future Assignments

Requests for assignments of new opcodes and their associated arguments MUST be done through the IETF CONSENSUS method as described in [[RFC2434](#)].

Lonvick

[Page 10]

Internet-Draft

SSH Protocol Assigned Numbers

October 2004

[4.6](#) Names

In the following sections, the values for the name spaces are textual. The conventions and instructions to the IANA for future assignments are given in this section. The initial assignments are given in their respective sections.

[4.6.1](#) Conventions for Names

All names registered by the IANA in the following sections MUST be printable US-ASCII strings, and MUST NOT contain the characters at-sign ("@"), comma (","), or whitespace or control characters (ASCII codes 32 or less). Names are case-sensitive, and MUST NOT be longer than 64 characters.

A provision is made here for locally extensible names. The IANA will not register, and will not control names with the at-sign ("@" in them. Names with the at-sign in them will have the format of "name@domainname" (without the double quotes) where the part preceding the at-sign is the name. The format of the part preceding the at sign is not specified, however these names MUST be printable US-ASCII strings, and MUST NOT contain the comma character (","), or whitespace, or control characters (ASCII codes 32 or less). The part following the at-sign MUST be a valid, fully qualified internet domain name [[RFC1034](#)] controlled by the person or organization defining the name. Names are case-sensitive, and MUST NOT be longer than 64 characters. It is up to each domain how it manages its local namespace. It has been noted that these names resemble [[RFC0822](#)] email addresses. This is purely coincidental and actually has

nothing to do with [[RFC0822](#)]. An example of a locally defined name is "ourcipher-cbc@example.com" (without the double quotes).

[4.6.2](#) Future Assignments of Names

Requests for assignments of new Names MUST be done through the IETF CONSENSUS method as described in [[RFC2434](#)].

[4.7](#) Service Names

The Service Name is used to describe a protocol layer.

| Service name ----- | Reference ----- |
|-----------------------|----------------------------------|
| ssh-userauth | [SSH-USERAUTH] |
| ssh-connection | [SSH-CONNECT] |

[4.8](#) Authentication Method Names

The Authentication Method Name is used to describe an authentication method for the "ssh-userauth" service [[SSH-USERAUTH](#)].

| Method name ----- | Reference ----- |
|----------------------|----------------------------------------------------------------|
| publickey | [SSH-USERAUTH , Section 4] |
| password | [SSH-USERAUTH , Section 5] |
| hostbased | [SSH-USERAUTH , Section 6] |
| none | [SSH-USERAUTH , Section 2.3] |

[4.9](#) Connection Protocol Assigned Names

The following are the Connection Protocol Type and Request names.

[4.9.1](#) Connection Protocol Channel Types

| Channel type ----- | Reference ----- |
|-----------------------|---------------------------------------------------------------|
| session | [SSH-CONNECT , Section 4.1] |

| | |
|-----------------|-----------------------------------------------|
| x11 | [SSH-CONNECT, Section 4.3.2] |
| forwarded-tcpip | [SSH-CONNECT, Section 5.2] |
| direct-tcpip | [SSH-CONNECT, Section 5.2] |

[4.9.2](#) Connection Protocol Global Request Names

| Request type | Reference |
|----------------------|---------------------------------------------|
| ----- | ----- |
| tcpip-forward | [SSH-CONNECT, Section 5.1] |
| cancel-tcpip-forward | [SSH-CONNECT, Section 5.1] |

[4.9.3](#) Connection Protocol Channel Request Names

| Request type | Reference |
|---------------|-----------------------------------------------|
| ----- | ----- |
| pty-req | [SSH-CONNECT, Section 4.2] |
| x11-req | [SSH-CONNECT, Section 4.3.1] |
| env | [SSH-CONNECT, Section 4.4] |
| shell | [SSH-CONNECT, Section 4.5] |
| exec | [SSH-CONNECT, Section 4.5] |
| subsystem | [SSH-CONNECT, Section 4.5] |
| window-change | [SSH-CONNECT, Section 4.7] |
| xon-xoff | [SSH-CONNECT, Section 4.8] |
| signal | [SSH-CONNECT, Section 4.9] |

| | |
|-------------|----------------------------------------------|
| exit-status | [SSH-CONNECT, Section 4.10] |
| exit-signal | [SSH-CONNECT, Section 4.10] |

[4.9.4](#) Initial Assignment of Signal Names

| Signal | Reference |
|--------|---------------|
| ----- | ----- |
| ABRT | [SSH-CONNECT] |
| ALRM | [SSH-CONNECT] |
| FPE | [SSH-CONNECT] |
| HUP | [SSH-CONNECT] |
| ILL | [SSH-CONNECT] |
| INT | [SSH-CONNECT] |
| KILL | [SSH-CONNECT] |

| | |
|------|---------------------------------|
| PIPE | [SSH-CONNECT] |
| QUIT | [SSH-CONNECT] |
| SEGV | [SSH-CONNECT] |
| TERM | [SSH-CONNECT] |
| USR1 | [SSH-CONNECT] |
| USR2 | [SSH-CONNECT] |

[4.10](#) Key Exchange Method Names

The Key Exchange Method Name describes a key-exchange method for the protocol [[SSH-TRANS](#)]. Note that, for historical reasons, the name "diffie-hellman-group1-sha1" is used for a key exchange method using Oakley Group 2. This is considered an aberration and should not be repeated. Any future specifications of Diffie Hellman key exchange using Oakley groups defined in [[RFC2412](#)] or its successors should be named using the group numbers assigned by IANA, and names of the form "diffie-hellman-groupN-sha1" should be reserved for this purpose.

Editor's Note: diffie-hellman-group14-sha1 is controversial at the moment. It is being discussed on the mailing list.

| Method name | Reference |
|-----------------------------|-------------------------------------------|
| ----- | ----- |
| diffie-hellman-group1-sha1 | [SSH-TRANS, Section 8.1] |
| diffie-hellman-group14-sha1 | [SSH-TRANS, Section 8.2] |

[4.11](#) Assigned Algorithm Names

The following names identify the Encryption Algorithm Names.

[4.11.1](#) Encryption Algorithm Names

| Cipher name | Reference |
|----------------|-------------------------------------------|
| ----- | ----- |
| 3des-cbc | [SSH-TRANS, Section 4.3] |
| blowfish-cbc | [SSH-TRANS, Section 4.3] |
| twofish256-cbc | [SSH-TRANS, Section 4.3] |
| twofish-cbc | [SSH-TRANS, Section 4.3] |

| | |
|----------------|----------------------------------------------------------------------------------------|
| twofish192-cbc | [SSH-TRANS, Section 4.3] |
| twofish128-cbc | [SSH-TRANS, Section 4.3] |
| aes256-cbc | [SSH-TRANS, Section 4.3] |
| aes192-cbc | [SSH-TRANS, Section 4.3] |
| aes128-cbc | [SSH-TRANS, Section 4.3] |
| serpent256-cbc | [SSH-TRANS, Section 4.3] |
| serpent192-cbc | [SSH-TRANS, Section 4.3] |
| serpent128-cbc | [SSH-TRANS, Section 4.3] |
| arcfour | [SSH-TRANS, Section 4.3] |
| idea-cbc | [SSH-TRANS, Section 4.3] |
| cast128-cbc | [SSH-TRANS, Section 4.3] |
| none | [SSH-TRANS, Section 4.3] |
| des-cbc | [FIPS-46-3] HISTORIC; See page 4 of [FIPS 46-3] |

[4.11.2](#) MAC Algorithm Names

The following names identify the MAC Algorithm Names.

| MAC name | Reference |
|--------------|-------------------------------------------|
| ----- | ----- |
| hmac-sha1 | [SSH-TRANS, Section 4.4] |
| hmac-sha1-96 | [SSH-TRANS, Section 4.4] |
| hmac-md5 | [SSH-TRANS, Section 4.4] |
| hmac-md5-96 | [SSH-TRANS, Section 4.4] |
| none | [SSH-TRANS, Section 4.4] |

[4.11.3](#) Public Key Algorithm Names

This table identifies the Public Key Algorithm names.

| Algorithm name | Reference |
|-----------------|-------------------------------------------|
| ----- | ----- |
| ssh-dss | [SSH-TRANS, Section 4.6] |
| ssh-rsa | [SSH-TRANS, Section 4.6] |
| x509v3-sign-rsa | [SSH-TRANS, Section 4.6] |
| x509v3-sign-dss | [SSH-TRANS, Section 4.6] |

| | |
|---------------|-------------------------------------------|
| spki-sign-dss | [SSH-TRANS, Section 4.6] |
| pgp-sign-rsa | [SSH-TRANS, Section 4.6] |
| pgp-sign-dss | [SSH-TRANS, Section 4.6] |

[4.11.4](#) Compression Algorithm Names

The following names identify the Compression Algorithm names.

| Algorithm name | Reference |
|----------------|-------------------------------------------|
| ----- | ----- |
| none | [SSH-TRANS, Section 4.2] |
| zlib | [SSH-TRANS, Section 4.2] |

Intellectual Property Statement

The IETF takes no position regarding the validity or scope of any Intellectual Property Rights or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; nor does it represent that it has made any independent effort to identify any such rights. Information on the procedures with respect to rights in RFC documents can be found in [BCP 78](#) and [BCP 79](#).

Copies of IPR disclosures made to the IETF Secretariat and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this specification can be obtained from the IETF on-line IPR repository at <http://www.ietf.org/ipr>.

The IETF invites any interested party to bring to its attention any copyrights, patents or patent applications, or other proprietary rights that may cover technology that may be required to implement this standard. Please address the information to the IETF at ietf-ipr@ietf.org.

The IETF has been notified of intellectual property rights claimed in regard to some or all of the specification contained in this document. For more information consult the online list of claimed rights.

Disclaimer of Validity

This document and the information contained herein are provided on an "AS IS" basis and THE CONTRIBUTOR, THE ORGANIZATION HE/SHE REPRESENTS OR IS SPONSORED BY (IF ANY), THE INTERNET SOCIETY AND THE INTERNET ENGINEERING TASK FORCE DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Copyright Statement
