Tunnel Interface Types YANG Module
draft-ietf-softwire-iftunnel-00

Abstract

This document specifies a YANG module containing a collection of IANA maintained YANG identities, used as interface types for tunnel interfaces.

Editorial Note (To be removed by RFC Editor)

Please update these statements in the document with the RFC number to be assigned to this document:

- o "This version of this YANG module is part of RFC XXXX;"
- o "RFC XXXX: Tunnel Interface Types YANG Module";
- o "reference: RFC XXXX"

Please update the "revision" date of the YANG module.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on June 15, 2019.

Copyright Notice

[1. Introduction](#)

This document specifies the initial version of the `iana-tunnel-type` YANG module identifying tunnel interface types. The module reflects IANA's registry maintained at [[TUNNELTYPE-IANA-REGISTRY](#)]. The latest revision of this module can be obtained from the IANA web site.

Tunnel-specific extensions may be added to the Interface module [[RFC8343](#)] as a function of the tunnel type. An example of this is provided in [Appendix A](#). It is not the intention of this document to define tunnel-specific extensions for every tunnel encapsulation technology; those are discussed in dedicated documents such as [[I-D.ietf-software-yang](#)].

This document uses the common YANG types defined in [[RFC6991](#)] and adopts the Network Management Datastore Architecture (NMDA [[RFC8342](#)]).

Boucadair & Farrer

Expires June 15, 2019

[Page 2]

The terminology for describing YANG modules is defined in [[RFC7950](#)]. The meanings of the symbols used in tree diagrams are defined in [[RFC8340](#)].

2. IANA Tunnel Type YANG Module

The iana-tunnel-type module imports the 'iana-if-type' module defined in [[RFC7224](#)].

The initial version of the modules includes tunnels types defined in [[RFC4087](#)], [[RFC7856](#)], [[RFC7870](#)], and [[RFC6346](#)].

[Page 6]

3. Security Considerations

The YANG module defined in this document is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF access control model [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

4. IANA Considerations

This document requests IANA to register the following URI in the "IETF XML Registry" [[RFC3688](#)]:

```
URI: urn:ietf:params:xml:ns:yang:iana-tunnel-type
Registrant Contact: IANA.
XML: N/A; the requested URI is an XML namespace.
```

This document requests IANA to register the following YANG module in the "YANG Module Names" registry [[RFC7950](#)].

```
name: iana-tunnel-type
namespace: urn:ietf:params:xml:ns:yang:iana-tunnel-type
prefix: iana-tunnel-type
reference: RFC XXXX
```

This document defines the initial version of the IANA-maintained iana-tunnel-type YANG module. IANA is requested to add this note:

Tunnel type values must not be directly added to the iana-tunnel-type YANG module. They must instead be respectively added to the "tunnelType" sub-registry (under "ifType definitions" registry).

When a tunnel type is added to the "tunnelType" sub-registry, a new "identity" statement must be added to the iana-tunnel-type YANG module. The name of the "identity" is the same as the corresponding enumeration in the IANAifType-MIB (i.e., IANATunnelType). The "identity" statement should have the following sub-statements defined:

"base": Contains the name assigned to the tunnel type, in lowercase.

Boucadair & Farrer

Expires June 15, 2019

[Page 7]

"description": Replicate the description from the registry.

"reference": Replicate the reference from the registry and add the title of the document.

Unassigned or reserved values are not present in the module.

When the iana-tunnel-type YANG module is updated, a new "revision" statement must be added in front of the existing revision statements.

IANA is requested to add this note to "tunnelType" sub-registry:

When this registry is modified, the YANG module iana-tunnel-type must be updated as defined in [RFC XXXX].

Appendix A. Example Usage

The following example illustrates how the Interface YANG module can be augmented with tunnel-specific parameters. In this example, the module is augmented with a 'remote-endpoint' for the tunnel. A tree structure is provided below:

```
module: ietf-extension-example
augment /if:interfaces/if:interface:
  +--rw remote-endpoint?    inet:ipv6-address
```

The 'extension-example' module imports the modules defined in [\[RFC6991\]](#) and [\[RFC8343\]](#) in addition to the "iana-tunnel-type" module defined in this document.

```
<CODE BEGINS> file "ietf-extension-example@2018-11-30.yang"

module ietf-extension-example {
  yang-version 1.1;

  namespace "urn:ietf:params:xml:ns:yang:ietf-extension-example";
  prefix example;

  import ietf-inet-types {
    prefix inet;
