**YANG Data Model for SR and SR TE Topologies**  
**[draft-ietf-teas-yang-sr-te-topo-00](#)**

## Abstract

This document defines a YANG data model for Segment Routing (SR) topology and Segment Routing (SR) traffic engineering (TE) topology.

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on August 24, 2018.

## [1. Introduction](#)

This document defines a YANG [[RFC7950](#)] data model for describing the presentations of Segment Routing (SR) topology and Segment Routing (SR) traffic engineering (TE) topology.

### [1.1. Terminology](#)

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [BCP 14](#), [[RFC2119](#)].

The following terms are defined in [[RFC7950](#)] and are not redefined here:

- o augment
- o data model

Liu, et al.

Expires August 24, 2018

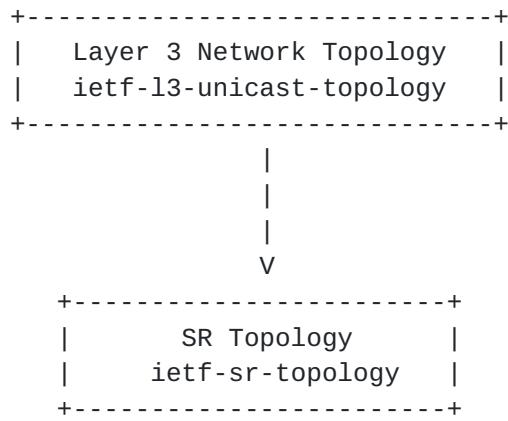

[Page 2]

- o data node

## **2. Modeling Considerations**

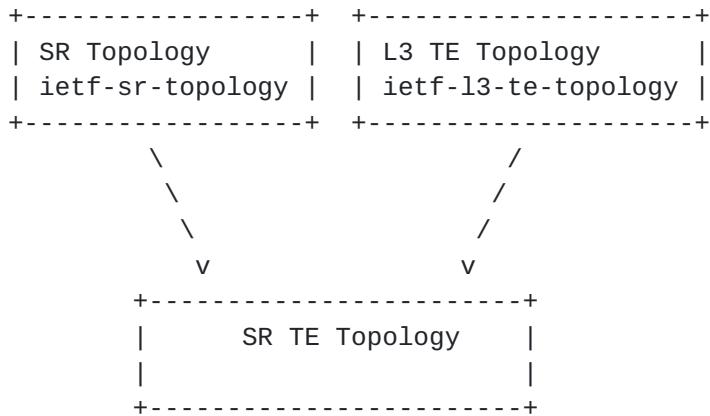

### **2.1. Segment Routing (SR) topology**

The Layer 3 network topology model is discussed in [[I-D.ietf-i2rs-yang-l3-topology](#)]. The Segment Routing (SR) topology model proposed in this document augments and uses the ietf-13-unicast-igp-topology module defined in [[I-D.ietf-i2rs-yang-l3-topology](#)]. SR related attributes are covered in the ietf-sr-topology model.

### **2.2. Segment Routing (SR) TE topology**

When traffic engineering is enabled on an SR topology, there will be associations between objects in SR topologies and objects in TE topologies. An SR TE topology is both an SR topology and a layer 3 TE topology. Multiple inheritance is used to achieve such relations.

Liu, et al.

Expires August 24, 2018

[Page 3]

Each type of topologies is indicated by "network-types" defined in [[I-D.ietf-i2rs-yang-network-topo](#)]. For the three types of topologies above, the data representations are:

L3 Topology:

```
/nd:networks/nd:network/nd:network-types/l3-unicast-topology
```

L3 TE Topology:

```
/nd:networks/nd:network/nd:network-types/l3-unicast-topology/l3-te
```

SR Topology:

```
/nd:networks/nd:network/nd:network-types/l3-unicast-topology/sr
```

SR TE Topology: (multiple inheritance)

```
/nd:networks/nd:network/nd:network-types/l3-unicast-topology/l3-te  
/nd:networks/nd:network/nd:network-types/l3-unicast-topology/sr
```

### [\*\*2.3.\*\*](#) Relations to `ietf-segment-routing`

[[I-D.ietf-spring-sr-yang](#)] defines `ietf-segment-routing` that is a model intended to be used on network elements to configure or operate segment routing; `ietf-sr-topology` defined in this document is intended to be used on a controller for the network-wide operations such as path computation.

SR topology model shares many modeling constructs defined in `ietf-segment-routing`. The module `ietf-sr-topology` uses the types and groupings defined in `ietf-segment-routing`.

### [\*\*2.4.\*\*](#) Open Items

- a. Protection on link: The feature of link protection will be modeled in the next revision.
- b. Link bundle: The feature of link bundle will be modeled in the next revision.

## [\*\*3.\*\*](#) Model Structure

The model tree structure of the Segment Routing (SR) topology module is as shown below:

```
module: ietf-sr-topology
  augment /nw:networks/nw:network/nw:network-types
/l3t:l3-unicast-topology:
  +-rw sr!
  augment /nw:networks/nw:network/l3t:l3-topology-attributes:
    +-rw sr
      +-rw srgb* [lower-bound upper-bound]
        +-rw lower-bound      uint32
        +-rw upper-bound      uint32
  augment /nw:networks/nw:network/nw:node/l3t:l3-node-attributes:

## 5. IANA Considerations

RFC Ed.: In this section, replace all occurrences of 'XXXX' with the actual RFC number (and remove this note).

This document registers the following namespace URIs in the IETF XML registry [[RFC3688](#)]:

-----  
URI: urn:ietf:params:xml:ns:yang:ietf-sr-topology  
Registrant Contact: The IESG.  
XML: N/A, the requested URI is an XML namespace.

-----  
URI: urn:ietf:params:xml:ns:yang:ietf-sr-topology-state  
Registrant Contact: The IESG.  
XML: N/A, the requested URI is an XML namespace.

This document registers the following YANG modules in the YANG Module Names registry [[RFC6020](#)]:

```
-----  
name:      ietf-sr-topology  
namespace: urn:ietf:params:xml:ns:yang:ietf-sr-topology  
prefix:    srt  
reference: RFC XXXX  
-----
```

```
-----  
name:      ietf-sr-topology-state  
namespace: urn:ietf:params:xml:ns:yang:ietf-sr-topology-state  
prefix:    srt-s  
reference: RFC XXXX  
-----
```

## [6. Security Considerations](#)

The configuration, state, action and notification data defined in this document are designed to be accessed via the NETCONF protocol [[RFC6241](#)]. The data-model by itself does not create any security implications. The security considerations for the NETCONF protocol are applicable. The NETCONF protocol used for sending the data supports authentication and encryption.

## **Appendix A. Companion YANG Model for Non-NMDA Compliant Implementations**

The YANG module `ietf-sr-topology` defined in this document is designed to be used in conjunction with implementations that support the Network Management Datastore Architecture (NMDA) defined in [[I-D.ietf-netmod-revised-datastores](#)]. In order to allow implementations to use the model even in cases when NMDA is not supported, the following companion module, `ietf-sr-topology-state`, is defined as state model, which mirrors the module `ietf-sr-topology` defined earlier in this document. However, all data nodes in the companion module are non-configurable, to represent the applied configuration or the derived operational states.

The companion module, `ietf-sr-topology-state`, is redundant and SHOULD NOT be supported by implementations that support NMDA.

As the structure of the companion module mirrors that of the cooresponding NMDA model, the YANG tree of the companion module is not depicted separately.
