Addition of Camellia Ciphersuites to Transport Layer Security (TLS)

<[draft-ietf-tls-camellia-03.txt](#)>

## Status of this Memo

This document is an Internet-Draft and is in full conformance with all provisions of [Section 10 of RFC2026](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress".

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

## Abstract

This document proposes the addition of new cipher suites to the Transport Layer Security (TLS) protocol to support the Camellia encryption algorithm as a bulk cipher algorithm.

## 1. Introduction

This document proposes the addition of new cipher suites to the TLS protocol [[TLS](#)] to support the Camellia encryption algorithm as a bulk cipher algorithm. This proposal provides a new option for fast, efficient, and royalty-free bulk cipher algorithms.

Note: This work was done when the first author worked for NTT.

## 1.1. Camellia

Camellia was selected as a recommended cryptographic primitive by the EU NESSIE (New European Schemes for Signatures, Integrity and Encryption) project [[NESSIE](#)] and included in the list of cryptographic techniques for Japanese e-Government systems, which were selected by the Japan CRYPTREC (Cryptography Research and Evaluation Committees) [[CRYPTREC](#)]. Camellia is also included in specification of the TV-Anytime Forum [[TV-ANYTIME](#)]. The TV-Anytime Forum is an association of organizations that seeks to develop specifications to enable audio-visual and other services based on mass-market high volume digital storage in consumer platforms. Camellia is specified as Ciphersuite in TLS used by Phase 1 S-7 (Bi-directional Metadata Delivery Protection) specification. Camellia has been submitted to other several standardization bodies such as ISO (ISO/IEC 18033) and IETF S/MIME Mail Security Working Group [[Camellia-CMS](#)].

Camellia supports 128-bit block size and 128-, 192-, and 256-bit key sizes, i.e. the same interface specifications as the Advanced Encryption Standard (AES) [[AES](#)].

Camellia was jointly developed by NTT and Mitsubishi Electric Corporation in 2000. It was carefully designed to withstand all known cryptanalytic attacks and even to have a sufficiently large security leeway. It has been scrutinized by worldwide cryptographic experts.

Camellia was also designed to have suitability for both software and hardware implementations and to cover all possible encryption applications that range from low-cost smart cards to high-speed network systems. Compared to the AES, Camellia offers at least comparable encryption speed in software and hardware. In addition, a distinguishing feature is its small hardware design. Camellia perfectly meets one of the current TLS market requirements, where low power consumption is a mandatory condition.

The Camellia homepage, <http://info.isl.ntt.co.jp/camellia/>, contains a wealth of information about camellia, including

detailed specification, security analysis, performance figures, reference implementation, test vectors, and intellectual property information.

## [1.2.](#) Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document (in uppercase, as shown) are to be interpreted as described in [[RFC2119](#)].

## [2.](#) Proposed Cipher Suites

The new ciphersuites proposed here have the following definitions:

```
CipherSuite TLS_RSA_WITH_CAMELLIA_128_CBC_SHA      = { 0x00,0x41 };
CipherSuite TLS_DH_DSS_WITH_CAMELLIA_128_CBC_SHA   = { 0x00,0x42 };
CipherSuite TLS_DH_RSA_WITH_CAMELLIA_128_CBC_SHA   = { 0x00,0x43 };
CipherSuite TLS_DHE_DSS_WITH_CAMELLIA_128_CBC_SHA  = { 0x00,0x44 };
CipherSuite TLS_DHE_RSA_WITH_CAMELLIA_128_CBC_SHA  = { 0x00,0x45 };
CipherSuite TLS_DH_anon_WITH_CAMELLIA_128_CBC_SHA  = { 0x00,0x46 };
```

```
CipherSuite TLS_RSA_WITH_CAMELLIA_256_CBC_SHA      = { 0x00,0x84 };
CipherSuite TLS_DH_DSS_WITH_CAMELLIA_256_CBC_SHA   = { 0x00,0x85 };
CipherSuite TLS_DH_RSA_WITH_CAMELLIA_256_CBC_SHA   = { 0x00,0x86 };
CipherSuite TLS_DHE_DSS_WITH_CAMELLIA_256_CBC_SHA  = { 0x00,0x87 };
CipherSuite TLS_DHE_RSA_WITH_CAMELLIA_256_CBC_SHA  = { 0x00,0x88 };
CipherSuite TLS_DH_anon_WITH_CAMELLIA_256_CBC_SHA  = { 0x00,0x89 };
```

## [3.](#) CipherSuite Definitions

### [3.1.](#) Cipher

All the ciphersuites described here use Camellia in cipher block chaining (CBC) mode as a bulk cipher algorithm. Camellia is a 128-bit block cipher with 128-, 192-, and 256-bit key sizes, i.e. it supports the same block and key sizes as the Advanced Encryption Standard (AES). However, this document only defines ciphersuites for 128- and 256-bit keys as well as AES ciphersuites for TLS [[AES-TLS](#)]. They are enough for use in efficient and practical cases

as well as high-security applications.

Cipher	Type	Key Material	Expanded Key Material	Effective Key Bits	IV Size	Block Size
CAMELLIA_128_CBC	Block	16	16	128	16	16
CAMELLIA_256_CBC	Block	32	32	256	16	16

### 3.2. Hash

All the ciphersuites described here use SHA-1 [[SHA-1](#)] in an HMAC construction as described in section 5 of [[TLS](#)].

### 3.3. Key exchange

The ciphersuites defined here differ in the type of certificate and key exchange method. They use the following options:

CipherSuite	Key Exchange Algorithm
TLS_RSA_WITH_CAMELLIA_128_CBC_SHA	RSA
TLS_DH_DSS_WITH_CAMELLIA_128_CBC_SHA	DH_DSS
TLS_DH_RSA_WITH_CAMELLIA_128_CBC_SHA	DH_RSA
TLS_DHE_DSS_WITH_CAMELLIA_128_CBC_SHA	DHE_DSS

TLS_DHE_RSA_WITH_CAMELLIA_128_CBC_SHA	DHE_RSA
TLS_DH_anon_WITH_CAMELLIA_128_CBC_SHA	DH_anon
TLS_RSA_WITH_CAMELLIA_256_CBC_SHA	RSA
TLS_DH_DSS_WITH_CAMELLIA_256_CBC_SHA	DH_DSS
TLS_DH_RSA_WITH_CAMELLIA_256_CBC_SHA	DH_RSA
TLS_DHE_DSS_WITH_CAMELLIA_256_CBC_SHA	DHE_DSS
TLS_DHE_RSA_WITH_CAMELLIA_256_CBC_SHA	DHE_RSA
TLS_DH_anon_WITH_CAMELLIA_256_CBC_SHA	DH_anon

For the meanings of the terms RSA, DH\_DSS, DH\_RSA, DHE\_DSS, DHE\_RSA and DH\_anon, please refer to sections [7.4.2](#) and [7.4.3](#) of [[TLS](#)].

## 4. Security Considerations

It is not believed that the new ciphersuites are ever less secure than the corresponding older ones. Camellia is considered to be secure, and it has withstood extensive cryptanalytic efforts in

several open, worldwide cryptographic evaluation projects [[CRYPTREC](#)] [[NESSIE](#)].

At the time of writing this document there are no known weak keys for Camellia.

For other security considerations, please refer to the security considerations of the corresponding older ciphersuites described in [[TLS](#)] and [[AES-TLS](#)].

## [5.](#) Intellectual Property Rights

The IETF takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on the IETF's procedures with respect to rights in standards-track and standards-related documentation can be found in [BCP-11](#). Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementors or users of this specification can be obtained from the IETF Secretariat.

The IETF invites any interested party to bring to its attention any copyrights, patents or patent applications, or other proprietary rights which may cover technology that may be required to practice this standard. Please address the information to the IETF Executive Director.

The IETF has been notified of intellectual property rights
