ECDHE_PSK Ciphersuites for Transport Layer Security (TLS)
draft-ietf-tls-ecdh-psk-01.txt

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>

This Internet-Draft will expire on October 2, 2008.

Abstract

This document extends [RFC 4279](#), [RFC 4492](#) and [RFC 4785](#), and specifies a set of ciphersuites that use a pre-shared key (PSK) to authenticate an Elliptic Curve Diffie-Hellman exchange (ECDH). These ciphersuites provide Perfect Forward Secrecy (PFS).

Table of Contents

- [7. References.....5](#)
- [7.1. Normative References.....5](#)
- [Author's Addresses.....6](#)
- [Intellectual Property Statement.....6](#)
- [Disclaimer of Validity.....6](#)

1. Introduction

[RFC 4279](#) specifies ciphersuites for supporting TLS using pre-shared symmetric keys and they (a) use only symmetric key operations for authentication, (b) use a Diffie-Hellman exchange authenticated with a pre-shared key, or (c) combines public key authentication of the server with pre-shared key authentication of the client.

[RFC 4785](#) specifies authentication-only ciphersuites (with no encryption). These ciphersuites are useful when authentication and integrity protection is desired, but confidentiality is not needed or not permitted.

[RFC 4492](#) defines a set of ECC-based ciphersuites for TLS and describes the use of ECC certificates for client authentication. In particular, it specifies the use of Elliptic Curve Diffie-Hellman (ECDH) key agreement in a TLS handshake and the use of Elliptic Curve Digital Signature Algorithm (ECDSA) as a new authentication mechanism.

This document specifies a set of ciphersuites that use a PSK to authenticate an ECDH exchange. These ciphersuites provide Perfect Forward Secrecy. One of these ciphersuite provides authentication-only.

The reader is expected to become familiar with [RFC 4279](#), [RFC 4492](#), and [RFC 4785](#) prior to studying this document.

1.1. Conventions used in this document

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

2. ECDHE_PSK Key Exchange Algorithm

The ciphersuites in this section match the ciphersuites defined in [[RFC4279](#)], except that they use an Elliptic Curve Diffie-Hellman

exchange [[RFC4492](#)] authenticated with a PSK. They are defined as follow:

CipherSuite	Key Exchange	Cipher	Hash
TLS_ECDHE_PSK_WITH_RC4_128_SHA	ECDHE_PSK	RC4_128	SHA
TLS_ECDHE_PSK_WITH_3DES_EDE_CBC_SHA	ECDHE_PSK	3DES_EDE_CBC	SHA
TLS_ECDHE_PSK_WITH_AES_128_CBC_SHA	ECDHE_PSK	AES_128_CBC	SHA
TLS_ECDHE_PSK_WITH_AES_256_CBC_SHA	ECDHE_PSK	AES_256_CBC	SHA

ECDHE_PSK Ciphersuites for TLS

April 2008

These ciphersuites make use of the EC parameter negotiation mechanism defined in [RFC 4492](#). When the ciphersuites defined in this document are used, the 'ec_diffie_hellman_psk' case inside the ServerKeyExchange and ClientKeyExchange structure MUST be used instead of the 'psk' case defined in [[RFC4279](#)] (i.e., the ServerKeyExchange and ClientKeyExchange messages include the Diffie-Hellman parameters). The PSK identity and identity hint fields have the same meaning and encoding specified in [[RFC4279](#)] (note that the ServerKeyExchange message is always sent, even if no PSK identity hint is provided).

The format of the ServerKeyExchange and ClientKeyExchange messages is shown below.

```
struct {
    select (KeyExchangeAlgorithm) {
        /* other cases for rsa, diffie_hellman, etc. */
        case ec_diffie_hellman_psk: /* NEW */
            opaque psk_identity_hint<0..2^16-1>;
            ServerECDHParams params;
    };
} ServerKeyExchange;

struct {
    select (KeyExchangeAlgorithm) {
        /* other cases for rsa, diffie_hellman, etc. */
        case ec_diffie_hellman_psk: /* NEW */
            opaque psk_identity<0..2^16-1>;
            ClientECDiffieHellmanPublic public;
    } exchange_keys;
} ClientKeyExchange;
```

The premaster secret is formed as follows. First, perform an ECDH

operation (See [section 5.10 of \[RFC4492\]](#)) to compute the shared secret. Next, concatenate a uint16 containing the length of the shared secret (in octets), the shared secret itself, a uint16 containing the length of the PSK (in octets), and the PSK itself.

This corresponds to the general structure for the premaster secrets (see Note 1 in [Section 2 of \[RFC4279\]](#)), with "other_secret" containing the shared secret:

```
struct {
    opaque other_secret<0..2^16-1>;
    opaque psk<0..2^16-1>;
};
```

[3.](#) ECDHE_PSK Key Exchange Algorithm with NULL Encryption

The ciphersuite in this section matches the ciphersuites defined in [section 2](#), except that we define a suite with null encryption.

CipherSuite	Key Exchange	Cipher	Hash
TLS_ECDHE_PSK_WITH_NULL_SHA	ECDHE_PSK	NULL	SHA

[4.](#) Security Considerations

The security considerations described throughout [\[RFC4279\]](#), [\[RFC4346\]](#), [\[RFC4492\]](#), and [\[RFC4785\]](#) apply here as well.

[5.](#) IANA Considerations

This document defines the following new ciphersuites, whose values are to be assigned from the TLS Cipher Suite registry defined in [\[RFC4346\]](#).

```
CipherSuite TLS_ECDHE_PSK_WITH_RC4_128_SHA      = { 0xXX, 0xXX };
CipherSuite TLS_ECDHE_PSK_WITH_3DES_EDE_CBC_SHA = { 0xXX, 0xXX };
CipherSuite TLS_ECDHE_PSK_WITH_AES_128_CBC_SHA  = { 0xXX, 0xXX };
CipherSuite TLS_ECDHE_PSK_WITH_AES_256_CBC_SHA  = { 0xXX, 0xXX };
CipherSuite TLS_ECDHE_PSK_WITH_NULL_SHA        = { 0xXX, 0xXX };
```

[6.](#) Acknowledgments

The author would like to thank Bodo Moeller, Simon Josefsson, Uri Blumenthal, Pasi Eronen, Alfred Hoenes, Paul Hoffman, Joseph Salowey, and the TLS mailing list members for their comments on the document.
