Pre-Shared Key Cipher Suite with NULL Encryption for
Transport Layer Security

[draft-ietf-tls-psk-null-00.txt](#)

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>

This Internet-Draft will expire on January 19, 2007.

Abstract

This document specifies authentication-only cipher suites for the Pre-Shared Key based [\[TLS-PSK\]](#) Transport Layer Security (TLS) [\[TLS\]](#) protocol to support null encryption. These cipher suites are useful for countries and places with cryptography-related restrictions.

[1.](#) Introduction

The RFC for Pre-Shared Key based TLS [[TLS-PSK](#)] specifies cipher suites for supporting TLS using pre-shared symmetric keys. However all the cipher suites defined in [[TLS-PSK](#)] require encryption. There is a need for a cipher suite that supports no encryption. This is required for implementations to meet import restrictions in some countries. Even though no encryption is used, this cipher suite supports authentication of the client and server to each other, and message integrity. This document augments [[TLS-PSK](#)] by adding three more cipher suites (PSK, DHE, RSA) with authentication and integrity only - no encryption.

[2.](#) Cipher Usage

The new cipher suites proposed here is very similar to cipher suites defined in [[TLS-PSK](#)], except that they define null encryption.

The cipher suites defined here uses the following options for key

exchange and hash part of the protocol:

Internet-Draft

New Cipher Suites for TLS-PSK

July 2006

CipherSuite	Key Exchange	Cipher	Hash
TLS_PSK_WITH_NULL_SHA	PSK	NULL	SHA
TLS_DHE_PSK_WITH_NULL_SHA	DHE_PSK	NULL	SHA
TLS_RSA_PSK_WITH_NULL_SHA	RSA_PSK	NULL	SHA

For the meaning of the terms PSK please refer to [section 1](#) in [TLS-PSK]. For the meaning of the terms DHE and RSA please refer to section 7.4.2 in [\[TLS\]](#).

[3.](#) Security Considerations

As with all schemes involving shared keys, special care should be taken to protect the shared values and to limit their exposure over time. As this document augments [\[TLS-PSK\]](#), everything stated in its Security Consideration section applies here. In addition, as cipher suites defined here do not support confidentiality - care should be taken not to send confidential information (such as passwords) over TLS-PSK connection with no encryption.

[4.](#) IANA Considerations

This document defines three new cipher suites, whose values are to be assigned from the TLS Cipher Suite registry defined in [\[TLS\]](#).

```
CipherSuite TLS_PSK_WITH_NULL_SHA      = { 0x00, 0xTBD1 };
CipherSuite TLS_DHE_PSK_WITH_NULL_SHA  = { 0x00, 0xTBD2 };
CipherSuite TLS_RSA_PSK_WITH_NULL_SHA  = { 0x00, 0xTBD3 };
```

[5.](#) Acknowledgments

The cipher suite defined in this document is an augmentation to and based on [\[TLS-PSK\]](#).

[6.](#) References

[6.1.](#) Normative References
