Example Handshake Traces for TLS 1.3
draft-ietf-tls-tls13-vectors-06

Abstract

Examples of TLS 1.3 handshakes are shown. Private keys and inputs are provided so that these handshakes might be reproduced. Intermediate values, including secrets, traffic keys and IVs are shown so that implementations might be checked incrementally against these values.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on January 10, 2019.

1. Introduction

TLS 1.3 [TLS13] defines a new key schedule and a number of new cryptographic operations. This document includes sample handshakes that show all intermediate values. This allows an implementation to be verified incrementally, examining inputs and outputs of each cryptographic computation independently.

A private key is included with the traces so that implementations can be checked by importing these values and verifying that the same outputs are produced.

Note: Invocations of HMAC-based Extract-and-Expand Key Derivation Function (HKDF) [RFC5869] are not labelled, but can be identified through the use the labels used by HKDF.

2. Private Keys

Ephemeral private keys are shown as they are generated in the traces.

The server in most examples uses an RSA certificate with a private key of:

3. Simple 1-RTT Handshake

In this example, the simplest possible handshake is completed. The

server is authenticated, but the client remains anonymous. After connecting, a few application data octets are exchanged. The server sends a session ticket that permits the use of 0-RTT data in any resumed session.

{client} create an ephemeral x25519 key pair:

private key (32 octets): 01 61 d7 bf 4b a0 6c 35 68 f1 09 54 f0 f1 ca 08 74 60 54 9c dc 7b fe b2 77 6b 46 04 d8 2f aa c2

public key (32 octets): b0 f5 01 9f b0 f1 e5 37 6b 8b 1d fb 90 5f 1d 91 51 61 ba c3 77 07 da d8 90 7b d7 1b 98 07 b3 45

{client} send a ClientHello handshake message

{client} send handshake record:

payload (196 octets): 01 00 00 c0 03 03 d4 b9 50 3c 5e 95 c9 ee cc 99 ce 63 76 cc ad 4d cc 06 d7 c8 f1 fa 44 b0 d9 56 00 e9 a0 58 6c 67 00 00 06 13 01 13 03 13 02 01 00 00 91 00 00 00 0b 00 09 00 00 06 73 65 72 76 65 72 ff 01 00 01 00 00 0a 00 14 00 12 00 1d 00 17 00 18 00 19 01 00 01 01 01 02 01 03 01 04 00 23 00 00 00 33 00 26 00 24 00 1d 00 20 b0 f5 01 9f b0 f1 e5 37 6b 8b 1d fb 90 5f 1d 91 51 61 ba c3 77 07 da d8 90 7b d7 1b 98 07 b3 45 00 2b 00 03 02 03 04 00 0d 00 20 00 1e 04 03 05 03 06 03 02 03 08 04 08 05 08 06 04 01 05 01 06 01 02 01 04 02 05 02 06 02 02 02 00 2d 00 02 01 01 00 1c 00 02 40 01

4. Resumed 0-RTT Handshake

This handshake resumes from the handshake in Section 3. Since the server provided a session ticket that permitted 0-RTT, and the client is configured for 0-RTT, the client is able to send 0-RTT data.

{client} create an ephemeral x25519 key pair:

private key (32 octets): 53 9d 7e bf a9 6c 5c eb 7d 86 f0 b9 68 2a 1d d7 b7 b6 0d 81 c2 73 50 74 35 cd d1 b7 aa 80 05 1f

5. HelloRetryRequest

In this example, the client initiates a handshake with an X25519 [RFC7748] share. The server however prefers P-256 [FIPS186] and sends a HelloRetryRequest that requires the client to generate a key share on the P-256 curve.

{client} create an ephemeral x25519 key pair:

private key (32 octets): a8 f7 4c 62 7c 09 56 a7 89 81 aa 60 39 e1 58 56 80 f4 af 93 c6 0b 4a 9c cc 35 1f 3c 1a c9 05 c8

public key (32 octets): 28 90 65 44 eb 46 f9 bc c3 63 92 0e 28 a6 4c 72 a5 ff d1 fb f5 71 06 36 c0 5b 88 ab a0 35 38 0c

{client} send a ClientHello handshake message

{client} send handshake record:

6. Client Authentication

In this example, the server requests client authentication. The client uses a certificate with an RSA key, the server uses an ECDSA certificate with a P-256 key. Note that private keys for this example are not included in the draft.

{client} create an ephemeral x25519 key pair:

private key (32 octets): 51 51 41 c1 11 7c f2 f1 81 f0 63 41 08
da 12 41 26 df 69 36 21 2b b4 8c 0a 48 b6 86 4d 14 8a 35

```
   public key (32 octets):  8e 61 95 b8 3b ea 47 57 fc 4f c5 c9 cc 73
      2b 87 10 c0 fe 12 1f dc 3b 46 53 85 0e c0 68 bd 6a 03
```

```
{client}  send a ClientHello handshake message

{client}  send handshake record:

8. Security Considerations

It probably isn't a good idea to use the private key here. If it weren't for the fact that it is too small to provide any meaningful security, it is now very well known.

9. IANA Considerations

This document makes no requests of IANA.
