Transport Area Working Group (tsvwg)

Internet-Draft

UTN/FRH January 27, 2011

F. Gont

Updates: <u>792</u>, <u>1122</u>, <u>1812</u>

(if approved)

Intended status: Standards Track

Expires: July 31, 2011

Deprecation of ICMP Source Quench messages draft-ietf-tsvwg-source-quench-00.txt

Abstract

This document formally deprecates the use of ICMP Source Quench messages by transport protocols, formally updating RFC 792, RFC 1122, and RFC 1812. Additionally, it requests that the status of RFC 1016 be changed to "Historic".

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of \underline{BCP} 78 and \underline{BCP} 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at http://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on July 31, 2011.

1. Introduction

The ICMP specification [RFC0792] defined the ICMPv4 Source Quench message (type 4, code 0), which was meant as a mechanism for congestion control. ICMP Source Quench has been known to be an ineffective (and unfair) antidote for congestion, and generation of ICMP Source Quench messages by routers has been formally deprecated by [RFC1812] since 1995. However, reaction to ICMP Source Quench messages in transport protocols has never been formally deprecated.

This document formally deprecates reaction to ICMP Source Quench messages by transport protocols such as TCP, formally updating [RFC0792], [RFC1122], and [RFC1812]. Additionally, it requests that the status of [RFC1016] be changed to "Historic".

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [RFC2119].

2. ICMP Source Quench messages

The ICMP specification [RFC0792] defined the ICMP Source Quench message (type 4, code 0), which was meant to provide a mechanism for congestion control. The Host Requirements RFC [RFC1122] stated in Section 4.2.3.9 that hosts MUST react to ICMP Source Quench messages by slowing transmission on the connection, and further added that the RECOMMENDED procedure was to put the corresponding connection in the slow-start phase of TCP's congestion control algorithm [RFC5681].

[RFC1812] noted that research suggested that ICMP Source Quench was an ineffective (and unfair) antidote for congestion, and formally deprecated the generation of ICMP Source Quench messages by routers, stating that routers SHOULD NOT send ICMP Source Quench messages in response to congestion.

[RFC5927] discussed the use of ICMP Source Quench messages for performing "blind throughput-reduction" attacks, and noted that most TCP implementations silently ignore ICMP Source Quench messages.

We note that TCP implements its own congestion control mechanisms [RFC5681] [RFC3168], that do not depend on ICMP Source Quench messages.

It is interesting to note that ICMPv6 $[{\tt RFC4443}]$ does not specify a "Source Quench" message.

3. Updating RFC 1122

This document hereby updates Section 3.2.2.3 of [RFC1122] as follows:

A host SHOULD NOT send ICMP Source Quench messages.

If a Source Quench message is received, the IP layer MAY silently discard it.

Section 4.2.3.9 of [RFC1122] is updated as follows:

TCP SHOULD silently discard any received ICMP Source Quench messages.

4. Updating RFC 1812

This document hereby updates <u>Section 4.3.3.3 of [RFC1812]</u> as follows:

A router SHOULD ignore any ICMP Source Quench messages it receives.

5. General Advice to Transport Protocols

If a Source Quench message is received by a transport-protocol instance (e.g., a TCP connection), it SHOULD be silently ignored.

6. Changing the status of RFC 1016 Historic

This document requests the RFC Editor to change the status of [RFC1016] to "Historic".

7. Security Considerations

ICMP Source Quench messages could be leveraged for performing blind throughput-reduction attacks against TCP and similar protocols. This attack vector, along with possible countermeasures, have been discussed in great detail in [RFC5927] and [CPNI-TCP]. However, as noted in [RFC5927] and [CPNI-TCP], virtually all current versions of popular TCP implementations already silently ignore ICMP Source Quench messages.

Silently ignoring ICMP Source Quench messages, as specified in this document, eliminates the aforementioned attack vector.

If deemed necessary, ICMP Source Quench messages could be filtered at firewalls.

8. IANA Considerations

This document has no actions for IANA. The RFC-Editor can remove this section before publication of this document as an RFC.

9. Acknowledgements

The author of this document would like to thank (in alphabetical order) Fred Baker, David Black, Scott Bradner, James Carlson, Antonio De Simone, Gorry Fairhurst, Alfred Hoenes, Mahesh Jethanandani, Dan Wing, and Andrew Yourtchenko, for providing valuable feedback on earlier versions of this document.

This document has benefited from discussions within the TCPM Working Group while working on [RFC5927].

Appendix A. Survey of support of ICMP Source Quench in some popular TCP/IP implementations

A large number of implementations completely ignore ICMP Source Quench messages meant for TCP connections. This behavior has been implemented in, at least, Linux [Linux] since 2004, and in FreeBSD [FreeBSD], NetBSD [NetBSD], OpenBSD [OpenBSD], and Solaris 10 since 2005. Additionally, OpenSolaris [OpenSolaris] has always shipped with support for ICMP Source Quench messages disabled.

<u>Appendix B</u>. Changes from previous versions of the draft (to be removed by the RFC Editor before publishing this document as an RFC)

B.1. Changes from <u>draft-gont-tsvwg-source-quench-01</u>

- o Addresses nits and editorial chagnes suggested by Gorry Fairhurst.
- o Added the status of Solaris and OpenSolaris to Appendix A.
- o Document resubmitted as <u>draft-ietf</u>.

B.2. Changes from draft-gont-tsvwg-source-quench-00

o This revision reflects the recent discussion about ICMP Source Quench messages on the tsvwg mailing-list. A detailed list of the changes is available at:

http://www.ietf.org/mail-archive/web/tsvwg/current/msg10407.html
