

**vCard Extensions for Instant Messaging (IM)**  
**draft-jennings-impp-vcard-06**

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/1id-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on September 5, 2006.

Abstract

This document describes an extension to vCard to support Instant Messaging (IM) and Presence Protocol (PP) applications. IM and PP are becoming increasingly common ways of communicating, and users want to save this contact information in their address books. This draft allows a URI that is associated with IM or PP to be specified inside of a vCard.

## 1. Conventions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC 2119](#) [3].

## 2. Overview

As more and more people use various instant messaging (IM) and presence protocol (PP) applications, it becomes important for them to be able to share this contact address information along with the rest of their contact information. [RFC 2425](#) [1] and [RFC 2426](#) [2] define a standard format for this information, which is referred to as vCard. This document defines a new type in a vCard for representing instant IM and PP URIs. It is very similar to existing types for representing email address and telephone contact information.

The type entry to hold this new contact information is an IMPP type. The IMPP entry has a single URI that indicates the address of a service that provides IM, PP, or both. Also defined are some parameters that give hints as to when certain URIs would be appropriate. A given vCard can have multiple IMPP entries, but each entry can contain only one URI. Each IMPP entry can contain multiple parameters. Any combination of parameters is valid, although a parameter should occur at most once in a given IMPP entry.

The type of URI indicates what protocols might be usable for accessing it, but this document does not define any of the types. For example a URI type of

```
"sip"[6] indicates to use SIP/SIMPLE,  
"xmpp"[7] indicates to use XMPP,  
"irc"[5] indicates to use IRC,  
"ymsgr" indicates to use yahoo,  
"msn" might indicate to use Microsoft messenger,  
"aim" indicates to use AOL, and  
"im"[9] or "pres"[8] indicates to use a CPIM or CPP gateway.
```

The normative definition of this new vCard type is given in [Section 3](#), and an informational ABNF is provided in [Section 4](#).

## 3. IANA Considerations

The required email to define this extension (as defined in [RFC2425](#)) was sent on October 29, 2004 to the [ietf-mime-direct@imc.org](mailto:ietf-mime-direct@imc.org) mailing list with the subject "Registration of text/directory MIME type

IMPP".

This specification updates the "text/directory MIME Types" subregistry in the "text/directory MIME Registrations" registry at <http://www.iana.org/assignments/text-directory-registrations> with the following information:

Type name: IMPP

Type purpose: To specify the URI for instant messaging and presence protocol communications with the object the vCard represents.

Type encoding: 8bit

Type value: A single URI. The type of the URI indicates the protocol that can be used for this contact.

Type special notes: The type can include the type parameter "TYPE" to specify an intended use for the URI. The TYPE parameter values can include:

- o An indication of the type of communication for which this URI is appropriate. This can be a value of PERSONAL or BUSINESS.
- o An indication of the location of a device associated with this URI. Values can be HOME, WORK, or MOBILE.
- o The value PREF indicates this is a preferred address and has the same semantics as the PREF value in a TEL type.

Additional information can be found in RFCAAAA.

Intended usage: COMMON

[Note to IANA: Please replace AAAA with the RFC number for this specification.]

#### **4. Formal Grammar**

The following ABNF grammar [4] extends the grammar found in [RFC 2425](#) [1] and [RFC 2426](#) [2].

```
;For name="IMPP"
param      = impp-param ; Only impp parameters are allowed

value      = uri

impp-param = "TYPE" "=" impp-type *("," impp-type)

impp-type  = "PERSONAL" / "BUSINESS" / ; purpose of communications
            "HOME" / "WORK" / "MOBILE" /
            "PREF" /
            iana-token / x-name;
            ; Values are case insensitive
```

## 5. Example

```
BEGIN:vCard
VERSION:3.0
FN:Alice Doe
IMPP;TYPE=personal,pref:im:alice@example.com
END:vCard
```

## 6. Security Considerations

This does not introduce additional security issues beyond the current vCard specification. It is worth noting that many people consider their presence information more sensitive than other address information. Any system that stores or transfers vCards needs to carefully consider the privacy issues around this information.

## 7. Acknowledgments

Thanks to Paul Hoffman, Sam Roberts and Pekka Pessi for their comments.
