Yang Data Model for ISIS protocol  
draft-litkowski-isis-yang-isis-cfg-00

## Abstract

This document defines a YANG data model that can be used to configure and manage ISIS protocol.

## Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on December 26, 2014.

## [1.](#) Introduction

This document defines a YANG data model for ISIS routing protocol.

The data model covers configuration of an ISIS routing protocol instance as well as operational states.

### [1.1.](#) Tree diagram

A simplified graphical representation of the data model is presented in [Section 2](#). The meaning if the symbols in these diagrams is as follows:

- o Brackets "[" and "]" enclose list keys.
- o Symbols after data node names: "?" means an optional node, "!" means a presence container, and "\*" denotes a list and leaf-list.

- o Abbreviations before data node names: "rw" means configuration data (read-write), and "ro" means state data (read-only).
- o Parentheses enclose choice and case nodes, and case nodes are also marked with a colon (":").

- o Ellipsis ("...") stands for contents of subtrees that are not shown.

## [2.](#) Design of the data model

The ISIS Yang module is divided in two main containers :

- o isis-cfg : that contains writable configuration objects.
- o isis-state : that contains read-only states.

The container isis-cfg and isis-state are augmenting the "routing-protocol" lists in ietf-routing module with specific ISIS parameters.

The figure below describe the overall structure of the isis Yang module :

```
module: isis
```

```
augment /rt:routing-state/rt:ribs/rt:rib/rt:routes/rt:route:
```

```
  +--ro metric?      uint32
  +--ro tag*         uint32
  +--ro route-type?  enumeration
```

```
augment /rt:active-route/rt:output/rt:route:
```

```
  +--ro metric?      uint32
  +--ro tag*         uint32
  +--ro route-type?  enumeration
```

```
augment /rt:routing/rt:routing-instance/rt:routing-protocols/rt:routing-protoco
```

```
  +--rw isis-cfg
    +--rw isis-level?          isis-level
    +--rw nsap-address         simple-iso-address
    +--rw ipv4-router-id?      inet:ipv4-address
    +--rw ipv6-router-id?      inet:ipv6-address
    +--rw reference-bandwidth?  uint32
    +--rw lsp-mtu?             uint16
```

```

+--rw lsp-lifetime?          uint16
+--rw lsp-refresh?           uint16
+--rw psnp-authentication?   boolean
+--rw csnp-authentication?   boolean
+--rw hello-authentication?  boolean
+--rw authentication-key?    string
+--rw authentication-type?   enumeration
+--rw isis-multi-topology-cfg
|   ...
+--rw isis-level-1-cfg
|   ...
+--rw isis-level-2-cfg

```

```

|   ...
+--rw overload
|   +--rw status?    boolean
|   +--rw timeout?   uint16
+--rw interfaces
|   +--rw interface* [name]
|       ...

```

augment /rt:routing-state/rt:routing-instance/rt:routing-protocols/rt:routing-p

```

+--ro isis-state
+--ro adjacencies
|   +--ro adjacency* [interface]
|       +--ro interface    string
|       +--ro level?       isis-level
|       +--ro state?       enumeration
+--ro spf-log
|   +--ro event* [id]
|       +--ro id            uint32
|       +--ro spf-type?     enumeration
|       +--ro level?        isis-level
|       +--ro spf-delay?    uint32
|       +--ro schedule-timestamp? yang:timestamp
|       +--ro start-timestamp?  yang:timestamp
|       +--ro end-timestamp?   yang:timestamp
|       +--ro trigger-lsp* [lsp]
|           +--ro lsp        isis-lsp-id
|           +--ro sequence?  uint32
+--ro lsp-log
|   +--ro event* [id]

```

```

|      +---ro id                      uint32
|      +---ro level?                  isis-level
|      +---ro lsp
|      |  +---ro lsp?                  isis-lsp-id
|      |  +---ro sequence?            uint32
|      +---ro received-timestamp?     yang:timestamp
+---ro database
|  +---ro level-1
|  ...
|  +---ro level-2
|  ...
+---ro hostnames
    +---ro hostname* [system-id]
        +---ro system-id              isis-system-id
        +---ro hostname?               string

```

## [2.1.](#) ISIS configuration

The ISIS configuration container is divided in :

- o Global parameters.
- o Level specific parameters (see [Section 2.3](#)).
- o Per interface configuration (see [Section 2.4](#)).

## [2.2.](#) Multitopology parameters

The multitopology section is used to enable support of MT extensions for specific address families.

A boolean is associated with each topology type, defining if the topology is enabled or not.

```

+---rw isis-multi-topology-cfg
|  +---rw ipv4-unicast?          boolean
|  +---rw ipv6-unicast?          boolean
|  +---rw ipv4-multicast?        boolean

```

```
|  +---rw ipv6-multicast?  boolean
```

### [2.3.](#) Per level parameters

The level parameter section of the ISIS instance describes the global parameters for level 1 and 2 including authentication, protocol preferences, default metrics ...

Level specific parameters override parameters contained directly under isis-cfg container.

```
+---rw isis-level-1-cfg
|  +---rw enabled?                boolean
|  +---rw psnp-authentication?    boolean
|  +---rw csnp-authentication?    boolean
|  +---rw hello-authentication?   boolean
|  +---rw authentication-key?     string
|  +---rw authentication-type?    enumeration
|  +---rw metric-type?            enumeration
|  +---rw preference?             uint8
|  +---rw external-preference?    uint8
|  +---rw default-ipv4-unicast-metric?  isis-wide-metric
|  +---rw default-ipv6-unicast-metric?  isis-wide-metric
|  +---rw default-ipv4-multicast-metric? isis-wide-metric
|  +---rw default-ipv6-multicast-metric? isis-wide-metric
+---rw isis-level-2-cfg
```

	+++rw enabled?	boolean
	+++rw psnp-authentication?	boolean
	+++rw csnp-authentication?	boolean
	+++rw hello-authentication?	boolean
	+++rw authentication-key?	string
	+++rw authentication-type?	enumeration
	+++rw metric-type?	enumeration
	+++rw preference?	uint8
	+++rw external-preference?	uint8
	+++rw default-ipv4-unicast-metric?	isis-wide-metric
	+++rw default-ipv6-unicast-metric?	isis-wide-metric
	+++rw default-ipv4-multicast-metric?	isis-wide-metric
	+++rw default-ipv6-multicast-metric?	isis-wide-metric

#### [2.4.](#) Per interface parameters

The per-interface section of the ISIS instance describes the interface specific parameters.

Each interface has interface-specific parameters and level-specific parameters. A level-specific parameter always override interface-specific parameter and an interface-specific parameter always override an isis global parameter (defined in isis-cfg).

```

+++rw interfaces
  +++rw interface* [name]
    +++rw name                leafref
    +++rw level?              isis-level
    +++rw lsp-interval?       uint16
    +++rw passive?            boolean
    +++rw csnp-interval?      uint16
    +++rw hello-authentication-type? enumeration
    +++rw hello-authentication-key? string

```

+++rw hello-interval?	uint16
+++rw hello-multiplier?	uint16
+++rw hello-padding?	boolean
+++rw ipv4-unicast?	boolean
+++rw ipv6-unicast?	boolean
+++rw ipv4-multicast?	boolean
+++rw ipv6-multicast?	boolean
+++rw interface-type?	enumeration

```

+--rw enabled?                boolean
+--rw tag*                    uint32
+--rw level-1
|  +--rw hello-authentication-type?  enumeration
|  +--rw hello-authentication-key?   string
|  +--rw hello-interval?             uint16
|  +--rw hello-multiplier?           uint16
|  +--rw ipv4-unicast?               boolean
|  +--rw ipv6-unicast?              boolean
|  +--rw ipv4-multicast?             boolean
|  +--rw ipv6-multicast?             boolean
|  +--rw priority?                  uint8
|  +--rw ipv4-unicast-metric?        isis-wide-metric
|  +--rw ipv6-unicast-metric?        isis-wide-metric
|  +--rw ipv4-multicast-metric?      isis-wide-metric
|  +--rw ipv6-multicast-metric?      isis-wide-metric
|  +--rw passive?                   boolean
+--rw level-2
   +--rw hello-authentication-type?  enumeration
   +--rw hello-authentication-key?   string
   +--rw hello-interval?             uint16
   +--rw hello-multiplier?           uint16
   +--rw ipv4-unicast?               boolean
   +--rw ipv6-unicast?              boolean
   +--rw ipv4-multicast?             boolean
   +--rw ipv6-multicast?             boolean
   +--rw priority?                  uint8
   +--rw ipv4-unicast-metric?        isis-wide-metric
   +--rw ipv6-unicast-metric?        isis-wide-metric
   +--rw ipv4-multicast-metric?      isis-wide-metric
   +--rw ipv6-multicast-metric?      isis-wide-metric
   +--rw passive?                   boolean

```

## 2.5. Operational states

isis-state container provides operational states for ISIS. This container is divided in multiple components :

- o adjacencies : provides state information about current ISIS adjacencies.

- o spf-log : provides information about SPF events on the node.

- o `lsp-log` : provides information about LSP events on the node (reception of an LSP or modification of local LSP).
- o `database` : provides details on current LSDB.
- o `hostname` : provides information about system-id to hostname mappings.

### 3. RPC operations

The "ietf-isis" module defines two RPC operations :

- o `clear-isis-database` : reset the content of a particular ISIS database and restart database synchronization with the neighbors.
- o `clear-isis-adjacency` : restart a particular set of ISIS adjacencies.

rpcs:

```
+---x clear-isis-adjacency
|  +--ro input
|    +--ro routing-instance-name      rt:routing-instance-state-ref
|    +--ro routing-protocol-instance-name  isis-instance-state-ref
|    +--ro isis-level?                isis-level
|    +--ro interface?                 string
+---x clear-isis-database
|  +--ro input
|    +--ro routing-instance-name      rt:routing-instance-state-ref
|    +--ro routing-protocol-instance-name  isis-instance-state-ref
|    +--ro isis-level?                isis-level
```

### 4. Notifications

The "ietf-isis" module a new notification "isis-adjacency-updown". This notification is triggered when an ISIS adjacency moves to Up or Down state.

This notification provides details on the affected adjacency and its new state.

notifications:

```
+---n isis-adjacency-updown
  +--ro interface?          string
  +--ro neighbor?           string
  +--ro neighbor-system-id? isis-system-id
  +--ro isis-level?         isis-level
  +--ro state?              enumeration
  +--ro reason?             string
```

## [5.](#) Interaction with other YANG modules

The "isis-cfg" container augments the "/rt:routing/rt:routing-instance/rt:routing-protocols/routing-protocol" container of the ietf-routing module by defining ISIS specific parameters.

The "isis-state" container augments the "/rt:routing-state/rt:routing-instance/rt:routing-protocols/routing-protocol" container of the ietf-routing module by defining ISIS specific operational states.

Some ISIS specific routes attributes are added to route objects of the ietf-routing module by augmenting "/rt:routing-state/rt:ribs/rt:rib/rt:routes/rt:route" and "/rt:active-route/rt:output/rt:route".

## [6.](#) Yang module

<CODE BEGINS> file "ietf-isis@2014-06-20.yang"

```
module ietf-isis {
  namespace "urn:ietf:params:xml:ns:yang:ietf-isis";

  prefix isis;

  import ietf-routing {
    prefix "rt";
  }

  import ietf-inet-types {
    prefix inet;
  }

  import ietf-yang-types {
    prefix yang;
  }
}
```

"The YANG module defines a generic configuration model for ISIS  
common across all of the vendor implementations.";

revision 2014-06-20 {

description "

- \* isis-op renamed to isis-state.
- \* Multiple instances under isis are removed.
- \* interface-cfg grouping removed and content  
is directly included in container isis.
- \* TLVxx renamed with human-readable name in isis-database.  
TLV reference are putted in description.
- \* Reference to core routing module were fixed.
- \* Namespace fixed.
- \* Add simple-iso-address type.
- \* area-id and system-id in isis container are merged to  
nsap-address.
- \* Add isis-system-id type.
- \* Add isis-lsp-id type.
- \* Add remaining-lifetime leaf in isis-database.
- \* Add TLV2 (is-neighbor) in isis-database.
- \* Renamed some container name for consistency  
reason ('isis-' prefixed).
- \* Add new identities isis-cfg and isis-state.
- \* Add descriptions.
- \* Add notification isis-adjacency-updown.
- \* Add RPC clear-isis-adjacency and clear-isis-database.
