URN Namespace for MEF Documents
draft-mahesh-mef-urn-01

Abstract

This document describes the Namespace Identifier (NID) 'mef' for Uniform Resource Names (URNs) used to identify resources published by MEF Forum (<http://www.mef.net>). MEF specifies and manages resources that utilize this URN identification model. Management activities for these and other resources types are handled by the manager of the MEF Assigned Names and Numbers (MANN) registry.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on June 17, 2016.

Please review these documents carefully, as they describe your rights and restrictions with respect to this document. Code Components extracted from this document must include Simplified BSD License text as described in [Section 4](#).e of

the Trust Legal Provisions and are provided without warranty as described in the Simplified BSD License.

1. Introduction

The MEF Forum (MEF), is a nonprofit international industry standards organization, dedicated to the worldwide adoption of Carrier Ethernet (CE) networks and services. The forum creates specifications in the area of Services, Architecture, Operations and Management.

As part of these specifications efforts, there is a need to identify identifiers in a managed namespace that are unique and persistent. To ensure that this namespace's uniqueness is absolute, a registration of a specific Unified Resource Name (URN) URN Syntax [[RFC2141](#)] Namespace Identifier (NID) for use by MEF is being specified in this document, in full conformance with the NID registration process specified in URN Namespace Definition Mechanism [[RFC3406](#)].

1.1. Terminology

+-----+-----+ Acronym Meaning +-----+-----+	
CE	Carrier Ethernet
MANN	MEF Assigned Names and Numbers
MEF	MEF Forum
NID	Namespace Identifier
NSS	Namespace Specific String
RDS	Resolution Discovery System
URN	Uniform Resource Name
+-----+-----+	

2. URN Specification for MEF

Namespace ID:

mef

Registration information:

registration version number: 1

registration date: 2015-10-17

Declared registrant of the namespace:

Registering organization

Name: MEF Forum

Address: 6033 W. Century Boulevard, Suite 1107 Los Angeles CA
90045 USA

Designated contact:

Role: Manager, MEF Namespace

Email: namespace@mef.net

Declaration of syntactic structure:

The syntax of namespace specific strings for the 'mef' namespace is <NSS> in [RFC 2141](#).

Relevant ancillary documentation:

MEF publishes information regarding the registered resources in the MEF Assigned Names and Numbers (MANN) registry (<https://www.mef.net/MANN>).

Identifier uniqueness considerations:

MEF will manage resource classes using the "mef" NID and will be the authority for managing resources and associated subsequent strings. MEF is expected to guarantee the uniqueness of the strings themselves, or it may permit secondary responsibility for certain defined resources.

MEF could allow for use of experimental type values for testing purposes only. Note that using experimental types may create collision as multiple users may use the same values for different resources and specific strings.

Identifier persistence considerations:

MEF will update the MEF Assigned Names and Numbers (MANN) registry to document the registered resources that will use the "mef" NID.

Process of identifier assignment:

Assignment of a URN from the MEF namespace will be documented as part of the MEF Assigned Names and Numbers (MANN) registry.

Process of identifier resolution:

The namespace is not listed with an Resolution Discovery System (RDS). Therefore this process is not relevant.

Rules for Lexical Equivalence:

The entire URN is case-insensitive.

Conformance with URN Syntax:

No special considerations

Validation mechanism:

None specified. URN assignment will be handled by procedures implemented in support of MEF activities.

Scope:

Global

3. Examples

The following are examples of URNs that MEF is looking to assign:

urn:mef:yang:mef-services

urn:mef:yang:mef-interfaces

4. Security Considerations

There are no additional security considerations other than those normally associated with the use and resolution of URNs in general, which are described in Function Requirements for URN [[RFC1737](#)], URN Syntax [[RFC2141](#)], and URN Namespace Definition Mechanism [[RFC3406](#)].

5. IANA Considerations

This document adds a new entry ("mef") in the urn-namespace registry. This is the defining document. When published, the entry can be found in the "Uniform Resource Names (URN) Namespaces" registry available from the IANA site (<http://www.iana.org>) and any associated mirrors.
