Status of this Memo

This document is an Internet-Draft. Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as ``work in progress.''

To learn the current status of any Internet-Draft, please check the ``1id-abstracts.txt' listing contained in the Internet-Drafts Shadow Directories on ftp.is.co.za (Africa), nic.nordu.net (Europe), munnari.oz.au (Pacific Rim), ds.internic.net (US East Coast), or ftp.isi.edu (US West Coast).

Note:

This document is NOT a standard. It is an announcement to interested parties of a conditional grant by the Hewlett-Packard Company (HP) of certain rights to use autotopology network management technology covered by specific HP patents in conjunction with the Internet Engineering Task Force's (IETF's) Internet-standard network management framework.

Purpose

This grant is made to help facilitate inclusion of certain patented search address technology covering network device mapping in IETF standards-track Management Information Base (MIB) modules. HP is offering this search address technology to the IETF as a technique for mapping network devices. It should be noted that the confirmatory license mentioned is optional, since the grant of rights is automatic.

A Grant of Rights to Hewlett-Packard US Patents 5,293,635 and 5,421,024

HP hereby covenants that it will not assert any claims in US Patents 5,293,635, 5,421,024, any continuations, divisions, or continuations-in-part of either, or any non-US counterparts of any of the foregoing against any party that makes, uses, sells, imports, or offers for sale, an implementation of an IETF standards-track MIB module that includes HP's contributed search address technology, or any derivative of that contribution, provided that the MIB module is employed to implement the Internet-standard network management framework. Such grant of rights is limited in that it does not include a right to incorporate such HP search address technology into proprietary MIB modules.

This grant of rights will permanently terminate with respect to any party (and to any subsidiary of a party) that asserts a patent it owns or controls, either directly or indirectly, against HP or any of its subsidiaries for implementation of, or operation of any system utilizing, search address technology. The termination of rights will occur as of the date the patent is asserted against HP.

A written confirmation of this grant, and/or a license under any other HP patent under HP's then-current terms, conditions, and royalty rates, can be obtained by sending a request to:
