A MIB Textual Convention for Language Tags
draft-mcwalter-langtag-mib-03.txt

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at <http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at <http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on September 21, 2007.

Abstract

This MIB module defines a textual convention to represent [BCP 47](#) language tags. The intent is that this textual convention will be imported and used in MIB modules that would otherwise define their own representation.

LANGTAG TC MIB

March 2007

1. Introduction

This memo defines a portion of the Management Information Base (MIB) for use with network management protocols in the Internet community. It defines a textual convention to represent [BCP 47](#) [[RFC4646](#)] language tags.

The LangTag textual convention defined by this RFC replaces the similar LanguageTag textual convention defined by [RFC 2932](#) [[RFC2932](#)].

The old LanguageTag textual convention is used by some existing MIB modules. New MIB modules should use the LangTag textual convention, which has been created (and is to be preferred) for the following reasons:

- o Its syntax description is current, and is more comprehensive.
- o It is short enough to use as an index object without subtyping, yet is of adequate length to represent any language tag in practice.
- o It is provided in a dedicated MIB module to simplify module dependencies.

It is not possible to apply changes in syntax and length to an existing textual convention. This is why the creation of a new textual convention with a new name was necessary.

2. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC 2119](#) [[RFC2119](#)].

3. The Internet-Standard Management Framework

For a detailed overview of the documents that describe the current Internet-Standard Management Framework, please refer to [section 7 of RFC 3410](#) [RFC3410].

Managed objects are accessed via a virtual information store, termed the Management Information Base or MIB. MIB objects are generally accessed through the Simple Network Management Protocol (SNMP). Objects in the MIB are defined using the mechanisms defined in the Structure of Management Information (SMI). This memo specifies a MIB module that is compliant to the SMIV2, which is described in STD 58, [RFC 2578](#) [RFC2578], STD 58, [RFC 2579](#) [RFC2579] and STD 58, [RFC 2580](#) [RFC2580].

LangTag ::= TEXTUAL-CONVENTION

DISPLAY-HINT "1a"
STATUS current
DESCRIPTION

"A language tag, constructed in accordance with [BCP 47](#).

Only lowercase characters are allowed. The purpose of this restriction is to provide unique language tags for use as indexes. [BCP 47](#) recommends case conventions for user interfaces, but objects using this textual convention MUST use only lowercase.

Values MUST be well-formed language tags, in conformance with the definition of well-formed tags in [BCP 47](#). An implementation MAY further limit the values it accepts to those permitted by a 'validating' processor, as defined in [BCP 47](#).

In theory, [BCP 47](#) language tags are of unlimited length. The language tag described in this TC is of limited length. The analysis of language tag lengths in [BCP 47](#) confirms that

[Page 4]

Internet-Draft

LANGTAG TC MIB

March 2007

this limit will not pose a problem in practice. In particular, this length is greater than the minimum requirements set out in [section 4.3.1](#).

A zero-length language tag is not a valid language tag. This can be used to express 'language tag absent' where required, for example when used as an index field."

REFERENCE "[RFC 4646](#) [BCP 47](#)"

SYNTAX OCTET STRING (SIZE (0 | 2..63))

END

[5](#). Security Considerations

This MIB module does not define any management objects. Instead, it defines a textual convention that may be imported by other MIB modules and used for object definitions.

Meaningful security considerations can only be written in the MIB modules that define management objects. This document therefore has

no impact on the security of the Internet.

6. IANA Considerations

LANGTAG-TC-MIB should be rooted under the mib-2 subtree. IANA is requested to assign { mib-2 XXX } to the LANGTAG-TC-MIB module specified in this document.

7. Notes to the RFC editor - remove before publication

This document should be published simultaneously with IPMCAST-MIB ([draft-ietf-mboned-ip-mcast-mib](#)).

This is because LANGTAG-MIB replaces the LanguageTag textual convention that is already present in [RFC 2932](#), which will be obsoleted by the publication of IPMCAST-MIB.

8. Acknowledgements

This MIB module is a reworking of existing material from [RFC 2932](#).

This module was generated by editing together contributions from Randy Presuhn, Dan Romascanu, Bill Fenner, Juergen Schoenwaelder, Bert Wijnen, Doug Ewell, and Ira McDonald.
