**A YANG Model for MPLS MSD  
draft-qu-mpls-mpls-msd-yang-01**

Abstract

This document defines a YANG data module augmenting the IETF MPLS YANG model to provide support for MPLS Maximum SID Depths (MSDs) as defined in [RFC 8476](#) and [RFC 8491](#).

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on February 2, 2022.

**1. Overview**

YANG [[RFC7950](#)] is a data definition language used to define the contents of a conceptual data store that allows networked devices to be managed using NETCONF [[RFC6241](#)]. YANG is proving relevant beyond its initial confines, as bindings to other interfaces (e.g., ReST) and encodings other than XML (e.g., JSON) are being defined. Furthermore, YANG data models can be used as the basis for implementation of other interfaces, such as CLI and programmatic APIs.

This document defines a YANG data module augmenting the IETF MPLS YANG model [[RFC8960](#)], which itself augments [[RFC8349](#)], to provide operational state for various MSDs[RFC8662].

The augmentation defined in this document requires support for the MPLS base model[RFC8960] which defines basic MPLS configuration and state.

The YANG module in this document conforms to the Network Management Datastore Architecture (NMDA) [[RFC8342](#)].

**1.1. Requirements Language**

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [[RFC2119](#)].

## 2. YANG Module for MPLS MSD

This document defines a YANG module for MSD extensions [RFC8476][RFC8491] to MPLS base model as defined in [RFC8960].

```
module: ietf-mpls-msd
  augment /rt:routing/mpls:mpls:
    +--ro msd
      +--ro node-msds* [msd-type]
        | +--ro msd-type    identityref
        | +--ro msd-value?  uint8
      +--ro link-msds* [interface]
        +--ro interface    if:interface-ref
        +--ro link-msd* [msd-type]
          +--ro msd-type    identityref
          +--ro msd-value?  uint8
```

      "Maximum SID Depth (MSD) operational state.";
    uses max-sid-depth;
  }
}
}
<CODE ENDS>
```

### 3. Security Considerations

The YANG modules specified in this document define a schema for data that is designed to be accessed via network management protocols such as NETCONF [[RFC6241](#)] or RESTCONF [[RFC8040](#)]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [[RFC6242](#)]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [[RFC8446](#)].

The NETCONF Access Control Model (NACM) [[RFC8341](#)] provides the means to restrict access for particular NETCONF or RESTCONF users to a pre-

configured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in the modules that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations.

Some of the readable data nodes in the modules may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. These are the subtrees and data nodes and their sensitivity/vulnerability:

```
/rt:routing/mpls:mpls/msd/node-msds
```

```
/rt:routing/mpls:mpls/msd/link-msds
```

Exposure of the node's maximum SID depth may be useful in mounting a Denial-of-Service (DoS) attack by sending packets to the node that the router can't process.

#### 4. IANA Considerations

This document registers URIs in the IETF XML registry [[RFC3688](#)]. Following the format in [[RFC3688](#)], the following registrations is requested to be made:

```
URI: urn:ietf:params:xml:ns:yang:ietf-mpls-msd
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
```

This document registers the YANG modules in the YANG Module Names registry [[RFC6020](#)].

```
name: ietf-mpls-msd
namespace: urn:ietf:params:xml:ns:yang:ietf-mpls-msd
prefix: mpls-msd
reference: RFC XXXX
```

#### 5. Acknowledgements

This document was produced using Marshall Rose's `xml2rfc` tool.

The YANG model was developed using the suite of YANG tools written and maintained by numerous authors.
