**Instant Messaging and Presence Purpose for the Call-Info Header in the  
Session Initiation Protocol (SIP)  
draft-saintandre-impp-call-info-01**

**Abstract**

This document defines and registers a value of "impp" ("instant messaging and presence protocol") for the "purpose" header field parameter of the Call-Info header field in the Session Initiation Protocol (SIP).

**Status of This Memo**

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on October 09, 2013.

## [1.](#) Introduction

To improve interoperability among real-time communication endpoints that support the combined use of the Session Initiation Protocol (SIP) [[RFC3261](#)] and the Extensible Messaging and Presence Protocol (XMPP) [[RFC6120](#)] (so-called "CUSAX" endpoints [[I-D.ivov-xmpp-cusax](#)]), it can be helpful to communicate the endpoint's SIP address over XMPP and the endpoint's XMPP address over SIP to provide hints about the endpoints communication capabilities. The former feature is enabled by an XMPP extension protocol called Reachability Addresses [[XEP-0152](#)]. As to the latter feature, discussion in the SIP community led to the conclusion that it would be best to use the Call-Info header [[RFC3261](#)] with a value of "impp" ("instant messaging and presence protocol") for the "purpose" header field parameter. This document defines and registers the "impp" value.

(Although CUSAX endpoints constitute the primary use case for the "impp" purpose, a Uniform Resource Identifier (URI) [[RFC3986](#)] for an instant messaging and presence protocol other than XMPP could be included in the Call-Info header.)

## [2.](#) Security Considerations

Advertising an endpoint's XMPP address over SIP could inform malicious entities about an alternative attack vector. Because the "purpose" header field parameter could be spoofed, the receiving endpoint ought to check the value against an authoritative source such as a user directory.

## [3.](#) IANA Considerations

The IANA is requested to add a new predefined value "impp" for the "purpose" header field parameter of the Call-Info header field, by adding this RFC as a reference to the line for the header field "Call-Info" and parameter name "purpose":
