## **Multiple SIP Reason Header Field Values**

### **Abstract**

The SIP Reason Header Field as defined in RFC 3326 allows only one Reason value per protocol value. Practice shows it is useful to allow multiple values with the same protocol value. This update to RFC 3326 allows multiple values for an indicated registered protocol when that protocol defines what the presence of multiple values means.

### **Discussion Venues**

This note is to be removed before publishing as an RFC.

Discussion of this document takes place on the Session Initiation Protocol Core Working Group mailing list ([sipcore@ietf.org](mailto:sipcore@ietf.org)), which is archived at <https://mailarchive.ietf.org/arch/browse/sipcore/>.

Source for this draft and an issue tracker can be found at <https://github.com/rjsparks/draft-sparks-sipcore-multiple-reasons>.

### **Status of This Memo**

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 16 May 2022.

### 1. Introduction

The SIP Reason Header Field as defined in RFC 3326 allows only one Reason value per protocol value. Practice shows it is useful to allow multiple values with the same protocol value. This update to RFC 3326 allows multiple values for an indicated registered protocol when that protocol defines what the presence of multiple values means.

### 2. Conventions and Definitions

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

### 3. Update to RFC3326

The last paragraph of section 2 of [[RFC3326](#)] is replaced as follows:

OLD:

A SIP message **MAY** contain more than one Reason value (i.e., multiple Reason lines), but all of them **MUST** have different protocol values (e.g., one SIP and another Q.850). An implementation is free to ignore Reason values that it does not understand.

NEW:

A SIP message **MAY** contain more than one Reason value (i.e., multiple Reason lines). If the registered protocol for the Reason value specifies what it means for multiple values to occur in one message, more than one value for that protocol **MAY** be present. Otherwise, there **MUST** be only one value per protocol provided (e.g., one SIP and another Q.850). An implementation is free to ignore Reason values that it does not understand.

#### 4. Security Considerations

This document adds no security considerations to the use of SIP. The security considerations in [RFC3326] and those in any registered protocols used in Reason header field values should be considered.

#### 5. IANA Considerations

This document has no IANA actions.
