Test Vectors for the Stream Cipher ChaCha
draft-strombergson-chacha-test-vectors-00

Abstract

This document contains test vectors for the stream cipher ChaCha using 8, 12 and 20 rounds as well as 128 and 256 bit keys.

Status of this Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on April 8, 2014.

Internet-Draft Test Vectors for the Stream Cipher ChaCha October 2013

1. Introduction

The ChaCha [[ChaCha](#)] algorithm is a fairly new stream cipher that is getting some attention. ChaCha has been proposed as a replacement for RC4 [[RC4](#)] and ChaCha is also used in a few protocols.

In order to efficiently implement the algorithm and ensure interoperability between different implementations, it is of great importance to be able to verify that a given implementation is functionally correct. Test vectors aids this verification by providing a known correct answer.

Unfortunately, for ChaCha there are no test vectors published. This Internet Draft tries to rectify this by providing test vectors for ChaCha.

2. Description of the test Vectors

The test vectors describes in this document is given as a number of test cases. For each test case there is a number of test vectors and known answers. The test vectors in a test case has been generated with support for:

- 128 and 256 bit keys
- 8, 12 and 20 rounds

This means that for a given test case there are 6 different test vectors. Each of these test vectors contains the keystream for two 64 byte blocks.

The test vectors in this I-D has been generated by a simple generator based on the chacha.c [[chacha.c](#)] reference model by Daniel J Bernstein. The generator has been verified to generate the same values as the reference model. reference model.

All zero input data blocks, that is 64 bytes with the value of 0x00 has been used during generation. Since ChaCha is a stream cipher and encryption, decryption is done by XOR-ing the data with the keystream. By using all zero data blocks we get the keystream itself.

The random key in Test Case 8 has been generated by the following command. For 128 bit key only the first 16 bytes are used.

```
$ echo -n "All your base are belong to us" | openssl dgst -sha256  
c46ec1b18ce8a878725a37e780dfb7351f68ed2e194c79fbc6aebee1a667975d
```

[Page 3]

Internet-Draft Test Vectors for the Stream Cipher ChaCha October 2013

The random IV in Test Case 8 has been generated by the following command. Only the first eight bytes are used.

```
$ echo -n "Internet Engineering Task Force" | openssl dgst -sha256  
1ada31d5cf688221c109163908ebe51debb46227c6cc8b37641910833222772a
```

The test vector generator is available as a stand alone c program in the chacha_testvectors [[chacha_testvectors](#)] project on Github.
