Reclassification of [RFC 3525](#) to Historic
draft-taylor-megaco-obsol3525-01.txt

Status of this Memo

By submitting this Internet-Draft, each author represents that any applicable patent or other IPR claims of which he or she is aware have been or will be disclosed, and any of which he or she becomes aware will be disclosed, in accordance with [Section 6 of BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

The list of current Internet-Drafts can be accessed at
<http://www.ietf.org/ietf/lid-abstracts.txt>.

The list of Internet-Draft Shadow Directories can be accessed at
<http://www.ietf.org/shadow.html>.

This Internet-Draft will expire on November 11, 2007.

Abstract

This document reclassifies [RFC 3525](#), Gateway Control Protocol Version 1, to Historic Status. This memo also obsoletes [RFC 3525](#).

1. Reclassification of [RFC 3525](#) to Historic

The protocol defined by [RFC 3525](#) [[RFC3525](#)] was developed jointly by the IETF Megaco Working Group and ITU-T Study Group 16. The ITU-T

Internet-Draft

[RFC3525](#) to Historic

May 2007

published ITU-T Recommendation H.248.1 (originally H.248) with the same contents as [RFC 3525](#). Since that initial development, the ITU-T has taken ownership of the protocol and has continued to work on it. The protocol as originally defined in [RFC 3525](#) underwent a series of corrections and clarifications. H.248.1 version 1 [[h248v1](#)] was republished in March, 2002, incorporating all changes agreed up to that date. Since then, further corrections have been agreed. The accumulated set of corrections to H.248.1 (03/2002) is available in the Implementors' Guide for Recommendation H.248.1 Version 1 (03/2002) ("Media Gateway Control Protocol") [[impgdv1](#)], available at no charge on the ITU-T web site.

[RFC 3525](#) has been rendered even more obsolete as a specification of the Megaco/H.248 protocol by the publication of further versions of ITU-T Recommendation H.248.1. Version 2 [[h248v2](#)] was published in May, 2002, and is the version most widely deployed at present. It is also the version that other standards bodies such as 3GPP are currently using as the basis for their own profile specifications. Version 3 [[h248v3](#)] was published more recently, in September, 2005.

In short, [RFC 3525](#) may serve as an introduction to the Megaco/H.248 protocol, but is misleading as a description of the protocol as currently standardized or deployed. It is appropriate to reclassify [RFC 3525](#) to Historic status, as described in [RFC 2026](#) [[RFC2026](#)].

[2.](#) Security Considerations

Reclassifying [RFC 3525](#) has no security implications.

[3.](#) IANA Considerations

This document does not require any new actions by the IANA. The IANA registries established by [RFC 3525](#) and extended by successive versions of ITU-T H.248.1 remain in force, along with the requirement for expert review by an IESG-designated expert.
