**YANG Data Model for FlexE Management**  
**draft-wang-ccamp-flexe-yang-cm-01**

## Abstract

This document defines a service provider targeted YANG data model for the configuration and management of a Flex Ethernet (FlexE) network, including FlexE groups. It also supports the configuration of each FlexE client as an interface. The YANG module in this document conforms to the Network Management Datastore Architecture (NMDA).

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on April 28, 2022.

## [1. Introduction](#)

From a service provider's point of view, a transport network with FlexE support are usually deployed with all FlexE Groups configured at first, and then FlexE clients are added one by one at a later stage.

Furthermore, when a FlexE transport network is used to backhaul 5G mobile services, synchronization channel can also be imbed in a FlexE PHY. The specific PHY used for synchronization channel can be retrieved for management.

Thus, this document defines a service provider targeted YANG data model for the configuration and management of a Flex Ethernet (FlexE) network, including FlexE groups. It also supports the configuration of each FlexE client as an interface. The data model of the FlexE client is augmented based on the generic interfaces data model as defined in [[RFC8343](#)], the FlexE attributes are based on the FlexE 2.1 Implementation Agreement as specified in [[FLEXE](#)].

The YANG modules in this document conforms to the Network Management Datastore Architecture (NMDA) [[RFC8342](#)].

### [1.1. Conventions used in this document](#)

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [BCP 14](#) [[RFC2119](#)] [[RFC8174](#)] when, and only when, they appear in all capitals, as shown here.

[Page 2]

## [1.2. Terminology](#)

Most terminologies used in this document are extracted from [[FLEXE](#)].

FlexE: Flex Ethernet.

FlexE Client: An Ethernet flow based on a MAC data rate that may or may not correspond to any Ethernet PHY rate.

FlexE Group: A FlexE Group is composed of from 1 to n Ethernet PHYs.

Ethernet PHY: an entity representing Ethernet Physical Coding Sublayer (PCS), Physical Media Attachment (PMA), and Physical Media Dependent (PMD) layers. Each PHY is consisted of one or more FlexE Instance (e.g., a 400GBASE-R PHY has four FlexE Instances).

Calendar: The total capacity of a FlexE Group is represented as a collection of slots. The calendar for a FlexE Group composed of n PHYs is represented in each PHY as an array of slots (e.g., each representing 5Gbps of bandwidth), i.e., timeslot-list string.

## [2. YANG model hierarchy for FlexE](#)

This section describes the hierarchy of the YANG modules for the FlexE management.

Configuration management of FlexE groups include:

- flexe-groups specifies management configuration of all FlexE groups, and flexe-phys further specifies management configuration of a list of PHYs in a specific Flex Group.

Configuration management of a FlexE client include:

- flexe-client specifies the FlexE slots used for the FlexE Client in the FlexE group.

A simplified YANG tree diagram [[RFC8340](#)] representing the data model is typically used by YANG modules. This document uses the same tree diagram syntax as described in [[RFC8340](#)].

A tree diagram of the module is depicted as the following:

```

module: ietf-flexe-cm
++-rw flexe
    +-rw flexe-groups
        +-rw flexe-group* [group-index]
            +-rw index          uint32
            +-rw group-num?      uint32
            +-rw negotiation-mode?  negotiation-mode-type
            +-ro total-bandwidth?  string
            +-ro free-bandwidth?   string
            +-ro sync-phy-number   uint32
            +-rw flexe-phys
                +-rw flexe-phy-list* [port-name]
                    +-rw port-name      if:interface-ref
                    +-rw phy-number?     uint32
                    +-ro free-timeslot-list? string
                    +-ro used-timeslot-list? string

augment /if:interfaces/if:interface:
    +-rw flexe-client
        +-rw client-index?      uint32
        +-rw group-index?       leafref
        +-rw client-num?        uint32
        +-rw timeslot-lists
            +-rw timeslot-list*   [port-name]
                +-rw port-name?     if:interface-ref
                +-rw time-slot?      string

```

### 3. YANG Module for FlexE group interface

The following YANG data module augments the interface container defined in [[RFC8343](#)] for a FlexE group interface. It imports iana-if-type [[RFC7224](#)] and ietf-interfaces [[RFC8343](#)].

```

<CODE BEGINS> file "ietf-flexe-cm@2021-06-18.yang"
module ietf-flexe-cm {
    yang-version 1.1;
    namespace "urn:ietf:params:xml:ns:yang:ietf-flexe-cm";
    prefix "flexe-cm";

    import iana-if-type {
        prefix ianaift;
    }
    import ietf-interfaces {
        prefix if;
        reference
        "RFC8343: A YANG Data Model for Interface Management";
    }
}

```
