DetNet QoS Yang
draft-xiong-detnet-qos-yang-02

Abstract

This document defines a YANG data model for Deterministic Networking (DetNet) Quality of Service (QoS) based on the Differentiated Services (DiffServ) model.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on May 4, 2020.

1. Introduction

Deterministic Networking (DetNet) as defined in [RFC8655], provides a capability to carry specified unicast or multicast data flows for real-time applications with extremely low data loss rates and bounded latency. In the meanwhile, DetNet and non-DetNet packets are allowed to be transmitted in the same network and more than one DetNet flows which has different priorities may be forwarded through the DetNet domain. As discussed in [I-D.ietf-detnet-ip] and [I-D.xiong-detnet-qos-policy], the Differentiated Services (DiffServ) can be used to provide Quality of Service (QoS) for DetNet services.

This document defines a YANG data model for DetNet QoS based on the DiffServ model.

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC2119].

1.2. Terminology

The terminology is defined as [RFC8655], [RFC3270], [RFC2474] and [RFC2475].
2. DetNet DiffServ QoS Model

This document defines a YANG data module for DetNet DiffServ QoS Model as discussed in [I-D.xiong-detnet-qos-policy]. In the ietf-detnet-qos module, this is performed as one of the DetNet QoS policy.

2.1. DetNet QoS Tree Structure

DetNet DiffServ model is one type of the DetNet QoS policy and other policy types can be defined in detnet-policy-type.

[I-D.xiong-detnet-qos-policy] specified two types of classifiers including BA (Behavior Aggregate) and MF (Multi-Field) classifiers in detnet-classifier-type. DetNet IP BA classifier selects packets based on the DiffServ Code Point (DSCP) and DetNet MPLS BA classifier is based on the MPLS Traffic Class (TC) field. DetNet IP MF classifier selects packets based on the value of a combination of source address, destination address, DSCP, protocol ID, source port and destination port numbers and DetNet MPLS MF classifier is based on the MPLS TC, service label (S-Label) field and forwarding labels (F-Labels) of the header.

[I-D.xiong-detnet-qos-policy] defined a DetNet (DN) Per Hop Behavior (PHB) for DetNet forward other than existing PHBs including AF,EF,CS,DF etc. The PHB class information description is as qos-phb-class shown.

[I-D.xiong-detnet-qos-policy] defined two new types of action for DetNet traffic conditioning named order and scheduler action. Other actions including meter, shaper, dropper and marker as the detnet-action-type shown.
